Overview

XW Series E-Stops

Interlock Switches

Enabling Switches

Safety Control Relays

HS6E Subminiature Interlock Switches with Solenoid

Key features:

- Compact body: 75 × 15 × 75mm
- 15mm wide, thinnest solenoid interlock switch in the world
- Reversible mounting and angled cable allow four actuator insertion directions
- Energy saving: 24V DC, 110mA (solenoid: 100mA, LED: 10mA)
- Manual unlocking possible on three sides
- LED indicator shows solenoid operation
- 500N locking retention force

Actuator Mounting Reference Position

As shown in the figure on the right, the mounting reference position of the actuator key when inserted in the interlock switch is:

The actuator stop on the actuator lightly touches the interlock switch.

After mounting the actuator, remove the actuator stop from the actuator.

Actuator Key Dimensions (mm) Straight Actuator (HS9Z-A61)

Straight Actuator (HS9Z-A61) Right-angle Actuator (HS9Ž-A62)

The retention force of the HS9Z-A62 actuator is 100N. Note: See page 323 for actuator installation. When tensile force exceeding 100N is expected, use the HS9Z-A62S actuator.

Operation Characteristics (reference)

27.4 (stroke in mm) Contacts ON (closed) : Contacts OFF (open)

Main circuit: Connected to the machine drive control circuit, sending the interlock signals of the protective door.

Monitor circuit: Sends the monitoring signals of open/closed and lock/unlocked statuses of the protective door.

Note 1: Do not attempt manual unlocking while the solenoid is energized. Note 2: Do not energize the solenoid for a long period of time while the door is open or while the door is unlocked manually using the manual unlock key.

The characteristics shown in the chart above are of the HS9Z-A61, -A62, -A65, and -A66 actuators. For the HS9Z-A628 actuator, subtract 0.6 mm. The characteristics show the contact status when the actuator enters an entry slot of an interlock switch.

Operating Instructions

Minimum Radius of Hinged Door

 When using the interlock switch on hinged doors, refer to the minimum radius of doors shown below. When using on doors with small minimum radius, use the angle adjustable actuator (HS9Z-A65 and HS9Z-A66).

Note: Because deviation or dislocation of hinged doors may occur in actual applications, make sure of the correct operation before installation.

When Using the HS9Z-A62/A62S Right-angle Actuator

• When door hinge is on the extension line of the interlock switch surface:

- When door hinge is on the extension line of the interlock switch surface
- **Horizontal Adjustment**

Istment Vertical Adjustment

• When door hinge is on the extension line of the actuator mounting surface

Vertical Adjustment

Horizontal Adjustment

Actuator Angle Adjustment for the HS9Z-A65/HS9Z-A66

- Using the angle adjustment screw, the actuator angle can be adjusted (see figures on page 370).
 Adjustable angle: 0 to 20°
- The larger the adjusted angle of the actuator, the smaller the applicable radius of the door opening.
- After installing the actuator, open the door. Then adjust the actuator so that its edge can enter properly into the actuator entry slot of the interlock switch.
- After adjusting the actuator angle, apply Loctite to the adjustment screw so that the screw will not become loose.

Mounting Examples

Application on Sliding Doors

Application on Hinged Doors

Note: When mounting the actuator, make sure that the actuator enters the slot in the correct direction, as shown on the right.

For Manual Unlocking

When using the manual unlock key

- Using the interlock switch with the actuator not fully turned (less than 90°) may cause damage to the interlock switch or operation failures (when manually unlocked, the switch will keep the main circuit disconnected and the door unlocked).
- Do not apply excessive force (0.45 N·m or more) to the manual unlock part, otherwise the manual unlock part will become damaged.

See instruction manual for full details.
