### **1** Description

### 1.1 Introduction

This document describes the integration of Hitachi VRF air conditioning systems into KNX home automation systems using gateway *Intesis KNX – Hitachi VRF*.

The aim of this integration is to monitor and control your Hitachi air conditioning system, from your KNX TP-1 installation. To do it so, Intesis performs as a one more KNX device, sending and receiving telegrams to group addresses in the KNX network.

Intesis makes available the Hitachi air conditioning system indoor units' datapoints through independent KNX objects.

Up to 64 indoor units supported, depending on product version.

This document assumes that the user is familiar with KNX and Hitachi technologies and their technical terms.

Integration of Hitachi VRF systems into KNX control systems

### 1.1 Functionality

Intesis<sup>™</sup> continuously monitors Hitachi VRF network for all configured signals and keeps the updated status of all of them in its memory. It triggers updates on configured group addresses to KNX network on value change.

Commands toward the indoor unit communication adaptor are permitted.

Each indoor unit is offered as a set of KNX objects.

Element	Object supported
	<ul> <li>Communication</li> </ul>
Outdoor Unit	status
	Status
	Status
Indoor Unit	Command
	<ul> <li>Communication</li> </ul>
	status
General signals	Command
(all units)	

### 1.2 Capacity of Intesis

Element	Max.	Notes
Number of indoor units	64*	Number of indoor units that can be controlled through Intesis

\* There are different models of *Intesis KNX – Hitachi VRF* each one with different capacity. The table above shows the capacity for the top model (with maximum capacity).

Their order codes are:

- INKNXHIT016O000: Model supporting up to 16 indoor units
- INKNXHIT064O000: Model supporting up to 64 indoor units

### 2 KNX System

In this section, a common description for all Intesis KNX series gateways is given, from the point of view of KNX system which is called from now on *internal system*. Connection with the Hitachi system is also called from now on *external system*.

### 2.1 Description

Intesis KNX connects directly to the KNX TP-1 bus and performs as one more device into the KNX system, with the same configuration and operational characteristics as other KNX devices.

Internally, the circuit part connected to the KNX bus is opto-isolated from the rest of the electronics.

Intesis KNX receives, manages and sends all the telegrams related to its configuration to the KNX bus.

On receiving WRITE telegrams of KNX group addresses associated to communication objects, the corresponding messages are sent to the external system (Hitachi installation).

When a change in a signal of the external system is detected, a WRITE telegram is sent to the KNX bus (addressed with the group address associated to the corresponding group object), in order to maintain both systems synchronized in every moment.

The status of the KNX bus is checked continuously and, if a bus drop-down is detected, for example due to failure in the bus power supply, after the KNX bus is restored again, Intesis will send READ telegrams to group addresses of all communication objects marked with flag 'Ri'. The behavior of each individual point into Intesis is determined by the flags configured for the communication object. See details below.

### 2.2 Points definition

Every group object in configuration has following KNX properties:

Property	Description
Description	Descriptive information about the communication object or signal.
Object function	Information on range of values for the group object.
DPT	Datapoint type. It is the KNX data type used to encode the signal's value. It will depend on the type of signal associated in the external system in every case.
Group	It is the KNX group to which the point is associated. It is also the group to which the read (R), write (W), transmit (T), update (U) and read on init (Ri) flags are applied. It is the sending group.
Listening addresses	They are the addresses that can write on the group object, a part of the main group address.
R	Read. If this flag is activated, READ telegrams of this group address will be accepted.
Ri	Read on Init. If this flag is activated, the object will trigger corresponding READ request (on associated group address) on initialization.
W	Write. If this flag is activated, WRITE telegrams on this group object will be accepted.
Т	Transmit. If this flag is activated, when the group object value changes, due to a change in the external system, a WRITE telegram of the associated group address will be sent to the KNX bus.
U	Update. If this flag is activated, UPDATE telegrams (response to READ telegrams) on this group object will be accepted.
Active	If activated, the point will be active in Intesis, if not, the behavior will be as if the point is not defined. This allows deactivating points without the need of delete them for possible future use.

These properties are common for all Intesis KNX series gateways. Although each integration may have specific properties according to the type of signals of the external system.

See list of communication objects in section 9 APPENDIX A – COMMUNICATION OBJECTS TABLE.

### 3 Connections

Find below information regarding the Intesis connections available.

### Power Supply

Must use NEC Class 2 or Limited Power Source (LPS) and SELV rated power supply.

#### If using DC power supply:

Respect polarity applied of terminals (+) and (-). Be sure the voltage applied is within the range admitted (check table below). The power supply can be connected to earth but only through the negative terminal, never through the positive terminal.

#### If using AC power supply:

Make sure the voltage applied is of the value admitted (24 Vac). Do not connect any of the terminals of the AC power supply to earth, and make sure the same power supply is not supplying any other device.

#### Ethernet

Connect the cable coming from the IP network to the connector ETH of the gateway. Use an Ethernet CAT5 cable. If communicating through the LAN of the building, contact the network administrator and make sure traffic on the port used is allowed through all the LAN path (check the gateway user manual for more information). Default IP is 192.168.100.246. DHCP is enabled by default.

### PortA / KNX

Connect the KNX TP1 bus to connectors A3 (+) and A4 (-) of gateway's PortA. Respect the polarity.

### PortB / H-Link Hitachi

Connect the H-Link terminals (TB2) of Hitachi Outdoor Unit to the connectors B1 and B2 of gateway's PortB. There is no polarity to be respected.

### **Console Port**

Connect a mini-type B USB cable from your computer to the gateway to allow communication between the Configuration Software and the gateway. Remember that Ethernet connection is also allowed. Check the user manual for more information.

### USB

Connect a USB storage device (not a HDD) if required. Check the user manual for more information.

Ensure proper space for all connectors when mounted (see section 6)

### 3.1 *Power device*

The first step to perform is to power up the device. To do so, a power supply working with any of the voltage range allowed is needed (check section 5). Once connected the ON led will turn on.

**WARNING!** In order to avoid earth loops that can damage the gateway, and/or any other equipment connected to it, we strongly recommend:

- The use of DC power supplies, floating or with the negative terminal connected to earth. **Never use a DC** power supply with the positive terminal connected to earth.
- The use of AC power supplies only if they are floating and not powering any other device.

### 3.2 Connect to Hitachi installation

Use the Port B connector of the Intesis device to connect Hitachi H-Link bus to the Intesis. Remember to follow all safety precautions indicated by Hitachi.

Connect the Hitachi H-Link bus to connectors B1 and B2 of gateway's PortB. Bus is not sensitive to polarity.

### 3.3 Connection to KNX

Connect the KNX TP1 bus to connectors A3 (+) and A4 (-) of gateway's PortA. Respect the polarity.

### 3.4 Connection to the configuration tool

This action allows the user to have access to configuration and monitoring of the device (more information can be found in the configuration tool User Manual). Two methods to connect to the PC can be used:

- Ethernet: Using the Ethernet port of Intesis.
- USB: Using the console port of Intesis, connect a USB cable from the console port to the PC.

### 4 Set-up process and troubleshooting

### 4.1 Pre-requisites

It is necessary to have a KNX installation, device or interface operative and well connected to the corresponding KNX port of Intesis. It is also required to have a Hitachi Air Conditioner installation, with accessible H-Link/TB2 port for connection of Intesis.

Connectors, connection cables, PC to use the configuration tool and other auxiliary material, if needed, are not supplied by HMS Industrial Networks S.L.U for this standard integration.

Items supplied by HMS Networks for this integration are:

- Intesis gateway.
- Link to download the configuration tool.
- USB Console cable to communicate with Intesis.
- Product documentation.

### 4.2 Intesis MAPS. Configuration & monitoring tool for Intesis KNX series

### 4.2.1 Introduction

Intesis MAPS is a Windows<sup>®</sup> compatible software developed specifically to monitor and configure Intesis new generation gateways.

The installation procedure and main functions are explained in the *Intesis MAPS KNX User Manual*. This document can be downloaded from the link indicated in the installation sheet supplied with the Intesis device or in the product website at <u>www.intesis.com</u>

In this section, only the specific case of Hitachi to KNX systems will be covered.

Please check the Intesis MAPS KNX User Manual for specific information about the different parameters and how to configure them.

### 4.2.2 Connection

To configure the Intesis connection parameters press on the *Connection* button in the *menu bar*.

Figure 4.3 Intesis MAPS KNX configuration tab

### 1. Device configuration

1.1. Physical Address. KNX physical address of the device in the network

- 1.2. Extended Addresses. Enables usage of KNX Extended addresses (range from 16/0/0 to 32/7/255).
- 2. Operating Mode. Settings related to KNX interface for control and feedback of AC unit's operating mode.

**2.1. KNX DPT for HVAC operation mode comm object. Base DPT.** Base DPT to use for control/monitor the operating mode. Following DPT types are offered:

- DPT\_20.105. DPT\_HVACContrMode: 0-Auto, 1-Heat, 3-Cool, 9-Fan, 14-Dry
- o DPT\_5.x (non-standarized): 0-Auto, 1-Heat, 2-Dry, 3-Fan, 4-Cool

**2.2. KNX DPT for HVAC operation mode comm object. Extra DPT.** Additional DPT to use for control/monitor the operating mode.

- DPT\_1.100. DPT\_Heat/Cool: 0-Cool, 1-Heat.
- DPT\_5.001. DPT\_Scaling: Enables objects "Control\_ Heat Mode & On" and "Control\_ Cool Mode & On". Their type is DPT\_Scaling (0..100%), and their ending is to be able to control parameters On/Off, Cool/Heat of indoor unit from a single percentage object. They are meant to provide compatibility with certain thermostats oriented to the operation of valves for Heating/Cooling. Whenever a value > 0% is received at each of these two objects, the corresponding operating mode and ON operation is sent to the indoor unit. Whenever both values are 0%, indoor unit is set to OFF

**2.3. Use of 1-bit Operating Modes. 1-bit Control Objects.** Enables a bit-type object for the control of each operating mode.

**2.4. Use of 1-bit Operating Modes. 1-bit Status Objects.** Enables a bit-type object for monitoring each operating mode.

#### 3. Temperature Sensor.

#### 3.1. Ambient temperature provided from KNX. Enables object Control\_ KNX ambient temperature.

**NOTE:** Indoor unit does not accept, by itself, that an ambient temperature for control of operation of the indoor unit is provided. To allow regulation of indoor unit according to a temperature reference from KNX, what Intesis does is passing a different temperature setpoint to the indoor unit than the one required by the user. The passed setpoint is such that the difference 'Ambient temperature reported by Hitachi IU – AC setpoint' is equal to 'Ambient temperature reported by KNX – AC setpoint required by KNX', using the following formula:

"AC Setp. Temp" = "AC Ret. Temp" - ("KNX Amb. Temp." - "KNX Setp. Temp")

Where:

- AC Setp. Temp: AC indoor unit setpoint temperature
- AC Ret. Temp: AC indoor unit return temperature
- KNX Amb. Temp.: Ambient temperature provided from KNX
- KNX Setp. Temp: Setpoint temperature provided from KNX

Consequently, when using this feature (Ambient temp provided from KNX), setpoint at AC and setpoint in KNX will not necessarily be the same (actually, user will not be able to operate setpoint from AC System controllers as the remote controller).

4. Fan Speed. Settings related to KNX interface for control and feedback of AC unit's fan speed.

**4.1. Auto Fan Speed.** Configures availability of Auto Fan Speed control/monitoring objects. Necessary if your indoor unit has auto fan speed.

**4.2. KNX DPT for Fan Speed comm objects. DPT\_5.001, DPT\_Scaling**. Control/monitoring of Fan Speed is performed by means of scaling (percentage) objects. Thresholds for control object and values for status object will vary according to number of fanspeeds of the unit.

**4.2. KNX DPT for Fan Speed comm objects. DPT\_5.010, DPT\_Value\_1\_Ucount**. Control/monitoring of Fan Speed is performed by means of enumerated values.

4.4. Use of 1-bit Fan Speed. 1-bit Control Objects. Enables a bit-type object for control of fan speed.

4.5. Use of 1-bit Fan Speed. 1-bit Status Objects. Enables a bit-type object for monitoring of each fan speed.

5. Vanes Position. Settings related to KNX interface for control and feedback of AC unit's vanes position.

4.1. Auto&Swing Vanes. Configures availability of Auto and Swing control/monitoring objects.

**4.2. KNX DPT for Vane Position comm objects. DPT\_5.001, DPT\_Scaling**. Control/monitoring of Vanes Positions is performed by means of scaling (percentage) objects. Thresholds for control object and values for status object will vary according to number of vanes positions of the unit.

**4.2. KNX DPT for Vane Position comm objects. DPT\_5.010, DPT\_Value\_1\_Ucount**. Control/monitoring of Vanes Positions is performed by means of enumerated values.

4.4. Use of 1-bit Fan Speed. 1-bit Control Objects. Enables a bit-type object for control of Vanes Positions.

**4.5. Use of 1-bit Fan Speed. 1-bit Status Objects.** Enables a bit-type object for monitoring of each Vanes Position.

### 4.2.5 Hitachi configuration

The first step will be setting the type of installation to integrate between in the combo box:

Hitachi Configuration		
Hitachi working mode	H-Link	~

- Direct communication with H-Link
- Communication through CSNET Manager.

### 4.2.5.1 Direct communication with H-Link

The faster way to import the units present in the H-Link bus is to Autodiscover them. To do so, click button **Scan** and the following window will appear:

		Scan	Hitachi Un	its	
Bus Sc	an				
Start Sca	n	Scan	Stop		
Scan R	lesults				
Available					
Add	OU	IU		Model	
			۲	Replace Units	<ul> <li>Add Units</li> </ul>

Figure 4.4 Intesis MAPS Scan Hitachi Units window

By pressing **Scan** button, connected Hitachi H-Link bus will be scanned for available units. Error window will appear if there is a problem in the connection with H-Link bus (units not powered, bus not connected, ...).

A progress bar will appear during the scan, which will take up to a few minutes. After scan is completed, detected units will be shown in available units as follows:

Start Sc	can an	Scan S	top	
		Stan		
Scan	Results			
Availab	le Units			
Add	OU	IU	Model	
$\checkmark$	01	01	SS	
$\checkmark$	01	02	FC	
$\checkmark$	01	03	VRF	
$\checkmark$	05	04	IU	
$\checkmark$	09	05	ES	
			People Contract Units	Add Units
			Neplace offics	

Figure 4.5 Intesis MAPS Scan Hitachi Units window with scan results

Select with its checkbox units to add (or replace) in installation, according to selection **Replace Units** / **Add Units**. After units to be integrated are selected, click button **Apply**, and changes will appear in previous **Units Configuration** window.

### 4.2.5.2 Communication through CS-NET

In this case, CS-NET must be setup in advance to the configuration of this gateway. When CS-NET Manager is selected, the following settings will be activated for the communication with CS-NET Manager:

- TCP node IP. Sets the IP address of the CSNET Manager.
- TCP node port. Sets the TCP port for the communication with CSNET Manager.
- Slave number. Specify the slave number of the CSNET Manager (0...255).

In addition to this, some Advance configuration settings are provided. Consider that in most of the cases, no modification is required in this part of the configuration, but these settings are included to overcome any issue detected for certain installations. These parameters are:

- Time Interframe. Minimum time between received and sent frames (0...100.000).
- **Retry timeout.** Minimum time before launching a retry frame after no response on the TCP connection (0...30.000ms).
- **Conn. Timeout.** Minimum time before launching an error message after no TCP connection (0...30.000ms).
- **Rx Timeout.** Minimum time before launching an error message after no TCP frames received, but TCP connection is OK (0...30.000ms).
- Time Slave chg. Minimum time of silence when changing from one slave device to another (0...10.000).

### 4.2.5.3 Common H-Link/CS-NET Manager settings

Regardless the type of installation (H-Link vs CS-NET Manager communication), a manual entry of the Hitachi units present in the H-Link bus is possible by using the AC units table:

Autodiscove	r	Scan	1		
Unit ID	Unit Type	IU	OU	Description	
🗹 Unit 1	Not Defined	1	1	Indoor Unit 1	
🗌 Unit 2	Not Defined	2	1	Indoor Unit 2	
Unit 3	Not Defined	3	1	Indoor Unit 3	
Unit 4	Not Defined	4	1	Indoor Unit 4	
Unit 5	Not Defined	5	1	Indoor Unit 5	
🗌 Unit 6	Not Defined	6	1	Indoor Unit 6	
Unit 7	Not Defined	7	1	Indoor Unit 7	
🗌 Unit 8	Not Defined	8	1	Indoor Unit 8

🗌 Unit 20	Not Defined	20	1	Indoor Unit 20	
Unit 21	Not Defined	21	1	Indoor Unit 21	

Supported Active Units: -

Figure 4.7 Intesis MAPS Hitachi configuration tab for H-Link configuration

There is a new column when CS-NET Manager is selected. The new column indicates de CSNETid of the selected unit:

### Units Configuration

Unit ID	Unit Type	IU	OU	CSNET Id	Description	^
🗌 Unit 1	Not Defined	1	1	0	Indoor Unit 1	
Unit 2	Not Defined	2	1	1	Indoor Unit 2	
🗌 Unit 3	Not Defined	3	1	2	Indoor Unit 3	
Unit 4	Not Defined	4	1	3	Indoor Unit 4	
Unit 5	Not Defined	5	1	4	Indoor Unit 5	
Unit 6	Not Defined	6	1	5	Indoor Unit 6	

### Figure 4.8 Intesis MAPS Hitachi configuration tab for CSNET Manager configuration

In Units Configuration section you need to enter, for each unit:

- Active. If it's active (checkbox at Unit xx), ranging from 1 to 64 indoor units that will be integrated (maximum number of units will depend on Intesis model)
- **IU address**. Address 1...64 of Unit in Hitachi H-Link bus.
- **OU address**. Address 1...64 of Outdoor Unit in Hitachi H-Link bus.
- **CSNETid**. (only for CS-NET Manager configuration): in this column, the AC address inside the CSNET manager must be configured by the integrator.
- **Description**. Descriptive name to easy identification of the unit (for example, 'living room floor 1 unit', etc).

#### **Global Parameters:**

In this section it is possible to select the temperature units for monitoring of the temperature signals available in the gateways, Celsius (°C) or Fahrenheit (°F).

### 4.2.6 Signals

All available KNX objects, its corresponding description and other main parameters are listed in the signals tab.

	ø	۲ 🔳		-M-							In	tesis	Box

### 4.2.7 Sending the configuration to Intesis

When the configuration is finished, follow the next steps.

1.- Save the project (Menu option *Project->Save*) on your hard disk (more information in Intesis MAPS User Manual).

2.- Go to tab 'Receive / Send' of MAPS, and in Send section, press Send button. Intesis will reboot automatically once the new configuration is loaded.

	connected before proc	eeding.	Send		

Figure 4.10 Intesis MAPS Receive/Send tab

# After any configuration change, do not forget to send the configuration file to the Intesis using the Send button in the Receive / Send section.

### 4.2.8 Diagnostic

To help integrators in the commissioning tasks and troubleshooting, the Configuration Tool offers some specific tools and viewers.

In order to start using the diagnostic tools, connection with the Gateway is required.

The Diagnostic section is composed by two main parts: Tools and Viewers.

Tools

Use the tools section to check the current hardware status of the box, log communications into compressed files to be sent to the support, change the Diagnostic panels' view or send commands to the gateway.

• Viewers

In order to check the current status, viewer for the Internal and External protocols are available. It is also available a generic Console viewer for general information about communications and the gateway status and finally a Signals Viewer to simulate the BMS behavior or to check the current values in the system.

Figure 4.11 Diagnostic

More information about the Diagnostic section can be found in the Configuration Tool manual.

### 4.2.9 Set-up procedure

- 1. Install Intesis MAPS on your laptop, use the setup program supplied for this and follow the instructions given by the Installation wizard.
- 2. Install Intesis in the desired installation site. Installation can be on DIN rail or on a stable not vibrating surface (DIN rail mounted inside a metallic industrial cabinet connected to ground is recommended).
- 3. Connect the KNX communication cable coming from the KNX network to the port marked as Port A on Intesis (More details in section 3).
- 4. Connect the communication cable coming from the Hitachi H-Link installation to the port marked as Port B of Intesis (More details in section 3).
- 5. Power up Intesis. The supply voltage can be 9 to 36 Vdc or just 24 Vac. Take care of the polarity of the supply voltage applied.

**WARNING!** In order to avoid earth loops that can damage Intesis and/or any other equipment connected to it, we strongly recommend:

- The use of DC power supplies, floating or with the negative terminal connected to earth. **Never use a DC** power supply with the positive terminal connected to earth.
- The use of AC power supplies only if they are floating and not powering any other device.
- 6. If you want to connect using IP, connect the Ethernet cable from the laptop PC to the port marked as Ethernet of Intesis (More details in section 3).

If you want to connect using USB, connect the USB cable from the laptop PC to the port marked as Console of Intesis (More details in section 3).

- 7. Open Intesis MAPS, create a new project selecting a copy of the one named **INKNXHIT---O000**.
- 8. Modify the configuration as desired, save it and download the configuration file to Intesis as explained in the Intesis MAPS user manual.
- 9. Visit the Diagnostic section and check that there is communication activity, some TX frames and some other RX frames. This means that the communication with the KNX installation and Hitachi installation is OK. In case there is no communication activity between Intesis and the KNX side and/or Hitachi units, check that those are operative: check communication cable used to connect all devices and any other communication parameter.

Figure 4.12 Enable COMMS

### 5 Electrical & Mechanical Features

Enclosure	Plastic, type PC (UL 94 V-0) Net dimensions (dxwxh): 90x88x56 mm Recommended space for installation (dxwxh): 130x100x100mm Color: Light Grey. RAL 7035	Battery	Size: Coin 20mm x 3.2mm Capacity: 3V / 225mAh Type: Manganese Dioxide Lithium	
Mounting	Wall. DIN rail EN60715 TH35.	Console Port	Mini Type-B USB 2.0 compliant 1500VDC isolation	
Terminal Wiring (for power supply and low-voltage signals)	Per terminal: solid wires or stranded wires (twisted or with ferrule) 1 core: 0.5mm <sup>2</sup> 2.5mm <sup>2</sup> 2 cores: 0.5mm <sup>2</sup> 1.5mm <sup>2</sup> 3 cores: not permitted	USB port	Type-A USB 2.0 compliant Only for USB flash storage device (USB pen drive) Power consumption limited to 150mA (HDD connection not allowed)	
Power	1 x Plug-in screw terminal block (3 poles) 9 to 36VDC +/-10%, Max.: 140mA.	Push Button	Button A: Check the user manual Button B: Check the user manual	
<b>OWCI</b>	24VAC +/-10% 50-60Hz, Max.: 127mA Recommended: 24VDC	Operation Temperature	0°C to +60°C	
Ethernet	1 x Ethernet 10/100 Mbps RJ45 2 x Ethernet LED: port link and activity	Operational Humidity	5 to 95%, no condensation	
	1 x KNX TP-1 Plug-in screw terminal block orange (2 poles) 2500VDC isolation from other ports	Protection	IP20 (IEC60529)

Switch A (SWA)	1 x DIP-Switch for PORT A configuration: Reserved for future use		2 x Port B TX/RX 1 x Button A indicator	
PORT B	1 x Serial EIA232 (SUB-D9 male connector) Reserved for future use 1 x H-Link Plug-in screw terminal block (3 poles) 1500VDC isolation from other ports		1 x Button B indicator	
Switch B	1 x DIP-Switch for PORT B configuration:			

Switch B 1 x DIP-Switch for PORT B configuration: (SWB) Reserved for future use (leave OFF, default)

### 6 Dimensions

Recommended available space for its installation into a cabinet (wall or DIN rail mounting), with space enough for external connections

## 7 AC Unit Types compatibility

A list of Hitachi unit model references compatible with INKNXHIT016O000 / INKNXHIT064O000 and their available features can be found in:

https://www.intesis.com/docs/compatibilities/inxxxhit001r000\_compatibility

## 8 Error codes listed in the Object "Status\_Unit error code"

This list contains all possible values shown for "Error Code" for each indoor unit and outdoor unit.

It must be considered that Outdoor Units are only able to reflect a single error for each indoor / outdoor unit in the system. Thus, a unit having two or more active errors from that list will only report a single error code, the one of the first error that has been detected.

### 8.1 Intesis Codes

Error Code	Error Category	Error Description
0	Intesis AC Inerface	No Communication Error OU

### 8.2 AC System Codes

Error Code	Error Category	Error Description
1	Indoor Unit	Activation of Protection Device (Float Switch). Activation of Float Switch (High Water Level in Drain Pan, Abnormality of Drain Pipe, Float Switch or Drain Pan)
2	Outdoor Unit	Activation of Protection Device (High Pressure Cut). Activation of PSH (Pipe Clogging, Excessive Refrigerant! Inert Gas Mixing).
3		Abnormality between Indoor and Outdoor. Incorrect Wiring, Loose Terminals, Disconnect Wire, Blowout of Fuse, Outdoor Unit Power OFF.
4	Transmission	Abnormality between Inverter PCB and Outdoor PCB. Inverter PCB - Outdoor PCB Transmission Failure (Loose Connector, Wire Breaking, Blowout of Fuse).
4.		Abnormality between Fan Controller and Outdoor PCB. Fan Controller - Outdoor PCB Transmission Failure (Loose Connector, Wire Breaking, Blowout of Fuse).
5	Supply Phase	Abnormality Power Source Phases. Incorrect Power Source, Connection to Reversed Phase, Open-Phase.
6		Abnormal Inverter Voltage. Outdoor Voltage Drop, Insufficient Power Capa
6.	Voltage	Abnormal Fan Controller Voltage. Outdoor Voltage Drop, Insufficient Power Capacity.
7	Cycle	Decrease in Discharge Gas Superheat. Excessive Refrigerant! Charge, Failure of Thermistor, Incorrect Wiring, Incorrect Piping Connection, Expansion Valve Locking at Opened Position (Disconnect Connector).
8		Increase in Discharge Gas Temperature. Insufficient Refrigerant! Charge, Pipe Clogging, Failure of Thermistor, Incorrect Wiring,
10	Transmission	Abnormality between Outdoor and Outdoor. Incorrect Wiring, Breaking Wire, Loose Terminals.
11		Incorrect Outdoor Unit Address Setting. Duplication of Address Setting for Outdoor Units (Sub Units) in Same Refrigerant! Cycle System
12	Outdoor Unit	Incorrect Outdoor Unit Main Unit Setting. Two (or more) Outdoor Units Set as "Main Unit" Exist in Same Refrigeran! Cycle System.

Error Code	Error Category	Error Description					
17		Inlet Air Thermistor. Incorrect Wiring, Disconnecting Wiring Breaking Wire, Short Circuit					
18	Sensoron Indoor Unit	Outlet Air Thermistor. Incorrect Wiring, Disconnecting Wiring Breaking Wire, Short Circuit					
19		Freeze Protection Thermistor. Incorrect Wiring, Disconnecting Wiring Breaking Wire, Short Circuit					
20		Gas Piping Thermistor. Incorrect Wiring, Disconnecting Wiring Breaking Wire, Short Circuit					
25	Fan Motor	Activation of Protection Device for Indoor Fan. Fan Motor Overheat, Locking					
33		High Pressure Sensor. Incorrect Wiring, Disconnecting Wiring Breaking Wire, Short Circuit.					
34		Outdoor Air Thermistor. Incorrect Wiring, Disconnecting Wiring Breaking Wire, Short Circuit.					
35	Sensor on Outdoor Unit	Discharge Gas Thermistor on Top of Compressor. Incorrect Wiring, Disconnecting Wiring Breaking Wire, Short Circuit.					
36		Heat Exchanger Liquid Pipe Thermistor. Incorrect Wiring, Disconnecting Wiring Breaking Wire, Short Circuit.					
37		Heat Exchanger Gas Pipe Thermistor. Incorrect Wiring, Disconnecting Wiring Breaking Wire, Short Circuit.					
41		Low Pressure Sensor. Incorrect Wiring, Disconnecting Wiring Breaking Wire, Short Circuit.					
49		Incorrect Capacity Setting of Outdoor Unit and Indoor Unit. Incorrect Capacity Code Setting of Combination Excessive or Insufficient Indoor Unit Total Capacity Code.					
53	System	Incorrect Setting of Indoor Unit No. Duplication of Indoor Unit No. in same Ref. Gr					
54		Incorrect of Indoor Unit Combination. Indoor Unit is Designed for R22.					
56		Abnormality of Picking up Circuit for Protection in Outdoor Unit. Failure of Protection Detecting Device (Incorrect Wiring of Outdoor PCB).					
57	Compressor	Abnormality Running Current at Constan! Speed Compressor. Overcurrent, Blowout Fuse, Current Sensor Failure, Instantaneous Power Failure, Voltage Drop, Abnormal Power Supply.					
58		Abnormality of Outdoor Unit Capacity. Outdoor Unit Capacity > 510kBtu/h					
59	Outdoor Unit	Incorrect Setting of Outdoor Unit Models Combination or Voltage. Incorrect Setting of Main and Sub Unit(s) Combination or Voltage.					
61		Abnormality Transmission between Main Unit and Sub Unit(s). Incorrect Wiring, Disconnect Wire, Breaking Wire, PCB Failure.					

Error Code	Error Category	Error Description						
67		Activation of Low Compression Ratio Protection Device. Defective Compression (Failure of Compressor of Inverter, Loose Power Supply Connection).						
68		Activation of Low Pressure Increase Protection Device. Overload at Cooling, High Temperature at Heating, Expansion Valve Locking (Loose Connector).						
69	Protection Device	Activation of High Pressure Increase Protection Device. Overload Operation (Clogging, Short-Pass), Pipe Clogging, Excessive Refrigerant! Inert Gas Mixing.						
71		Activation of Low Pressure Decrease Protection Device (Vacuum Operation Protection). Insuffcient Refrigerant!, Refrigeran! Piping, Clogging, Expansion Valve Locking at Open Position (Loose Connector).						
72		Activation of Inverter Overcurrent Protection Device. Overload Operation, Compressor Failure.						
81	Sensor	Abnormal Inverter Curren! Sensor. Current! Sensor Failure.						
83		Inverter Error Signal Detection. Driver IC Error Signal Detection (Protection for Overcurrent, Low Voltage, Short Circuit).						
84	Inverter Abnormality of Inverter Fin Temperature. Abnormal Inverter Fin Thermistor, Heat Exchanger Clogging, Fan Motor Failure.							
85		Inverter Failure. Inverter PCB Failure.						
87		Activation of Fan Controller Protection. Driver IC Error Signal Detection (Protection for Overcurrent, Low Voltage, Short Circuit), Instantaneous Overcurrent.						
90	Fan Controller	Abnormality of Fan Controller Fin Temperature. Fin Thermistor Failure, Heat Exchanger Clogging, Fan Motor Failure						
91		Activation of Overcurrent Protection. Fan Motor Failure.						
92		Abnormality of Fan Controller Sensor. Failure of Curren! Sensor (Instantaneous Overcurrent, Increase of Fin Temperature, Low Voltage, Earth Fault, Step-Out)						
177	Outdoor Unit No. Setting	Incorrect Setting of Unit and Refrigeran. Over 64 Number is Set for Address or Refrigeran! Cycle.						
181	Indoor Unit No. Setting	Incorrect Indoor Unit Connection Number Setting. More than 17 Non- Corresponding to Hi-NET Units are Connected to One System.						
193		Incorrect Indoor Unit Connection. 2 or more Switch Box Units are connected between outdoor unit and indoor unit.						
194	Switch Box Unit	Incorrect Indoor Unit Connection. 2 or more Switch Box Units are connected between outdoor unit and indoor unit.						
195		Incorrect Indoor Unit Connection No. Setting. 9 or More Indoor Units Connected to Switch Box Unit.						
238	Compressor	Compressor Protection Alarm. (It cannot be reset from remote Controller). This alarm code appears when the following alarms• occurs three times within 6 hours. *02, 07, 08, 39, 43 to 45, 47						

In case you detect an error code not listed, contact the technical support service of the HVAC Manufacturer for more information on the error meaning.

		Control_Fan speed mid	1 bit	DPT_Switch	1.001		W		1-Set fan speed mid
	FAN SPEED	Status_Fan speed mid	1 bit	DPT_Switch	1.001	R		Т	1-Speed mid active, 0-Speed mid not active
		Control_Fan speed high	1 bit	DPT_Switch	1.001		W		1-Set fan speed high
		Status_Fan speed high	1 bit	DPT_Switch	1.001	R		Т	1-Speed high active, 0-Speed high not active
		Control_Fan speed high+	1 bit	DPT_Switch	1.001		W		1-Set fan speed high+
		Status_Fan speed high+	1 bit	DPT_Switch	1.001	R		Т	1-Speed high+ active, 0-Speed high+ not active
		Control_Fan speed Man/Auto	1 bit	DPT_Switch	1.001		W		0-Manual; 1-Auto
		Status_Fan speed Man/Auto	1 bit	DPT_Switch	1.001	R		Т	0-Manual; 1-Auto
		Control_Vane position enumerated	1 byte	Non-standarized	5.x		W		1-Position 17-Position 7
	VANE POS	Status_Vane position enumerated	1 byte	Non-standarized	5.x	R		Т	1-Position 17-Position 7
	VAINE POS	Control_Vane position scaling	1 byte	DPT_Scaling	5.001		W		Thersholds(021%;2236%;3750%;5164%;6579%;8 093%; 94100%)
		Status_Vane position scaling	1 byte	DPT_Scaling	5.001	R		Т	Thersholds(014%;1529%;3043%;4457%;5871%;7 286%: 87100%)

User Manual r1.1 EN

INDOOR UNIT SIGNALS		Control_Vane position auto	1 bit	DPT_Switch	1.001	R		Т	1-Set auto vane, 0-Stop auto vane
		Status_Vane position auto	1 bit	DPT_Switch	1.001		W		1-Vane auto active, 0-Vane auto not active
		Control_Vane position position-1	1 bit	DPT_Switch	1.001	R		Т	1-Set position-1 vane
		Status_Vane position position-1	1 bit	DPT_Switch	1.001		W		1-Vane position-1 active, 0-Vane position-1 not active
		Control_Vane position position-2	1 bit	DPT_Switch	1.001	R		Т	1-Set position-2 vane
		Status_Vane position position-2	1 bit	DPT_Switch	1.001		W		1-Vane position-2 active, 0-Vane position-2 not active
		Control_Vane position position-3	1 bit	DPT_Switch	1.001	R		Т	1-Set position-3 vane
		Status_Vane position position-3	1 bit	DPT_Switch	1.001		W		1-Vane position-3 active, 0-Vane position-3 not active
		Control_Vane position position-4	1 bit	DPT_Switch	1.001	R		Т	1-Set position-4 vane
		Status_Vane position position-4	1 bit	DPT_Switch	1.001		W		1-Vane position-4 active, 0-Vane position-4 not active
		Control_Vane position position-5	1 bit	DPT_Switch	1.001	R		Т	1-Set position-5 vane
		Status_Vane position position-5	1 bit	DPT_Switch	1.001		W		1-Vane position-5 active, 0-Vane position-5 not active
		Control_Vane position position-6	1 bit	DPT_Switch	1.001	R		Т	1-Set position-6 vane
		Status_Vane position position-6	1 bit	DPT_Switch	1.001		W		1-Vane position-6 active, 0-Vane position-6 not active
		Control_Vane position position-7	1 bit	DPT_Switch	1.001	R		Т	1-Set position-7 vane
		Status_Vane position position-7	1 bit	DPT_Switch	1.001		W		1-Vane position-7 active, 0-Vane position-7 not active
	TEMPERATURES	Control_Temperature Setpoint (°C)	2 byte	DPT_Value_Temp	9.001		W		Cool:1930 ℃; Heat:1730 ℃
		Status_Temperature Setpoint (°C)	2 byte	DPT_Value_Temp	9.001	R		Т	Cool:1930 ℃; Heat:1730 ℃
		Status_AC Ambient Temperature (°C)	2 byte	DPT_Value_Temp	9.001	R		Т	-6363 °C
		Status_Remote Sensor Temperature (°C)	2 byte	DPT_Value_Temp	9.001	R		Т	-6363 °C
		Control_KNX ambient Temperature (°C)	2 byte	DPT_Value_Temp	9.001		W		°C
		Status_Outlet Temperature (°C)	2 byte	DPT_Value_Temp	9.001		W		-6363 ℃
		Status_GasPipe Temperature (°C)	2 byte	DPT_Value_Temp	9.001	R		Т	-6363 ℃
		Status_LiquidPipe Temperature (°C)	2 byte	DPT_Value_Temp	9.001		W		-6363 °C
	ERROR CODE	Status_Unit error	1 bit	1.005-DPT_Alarm	1.005	R		Т	0-No error, 1-Error
		Status_Unit error code	2 byte	Non-standarized	8.x	R		Т	0-No Error, X-Error (1999)
	FILTER	Status_FilterSign	1 bit	DPT_Alarm	1.005	R		Т	0-Normal, 1-Alarm
		Control_FilterReset	1 bit	DPT_Reset	1.015		W		0-No reset, 1-Reset
	COMM STATUS	Status_Communication status	1 bit	DPT_Switch	1.001	R		Т	0-Not exist, 1-Exist
