

ISL28110, ISL28210

Precision Low Noise JFET Operational Amplifiers

FN6639  
Rev 3.00  
November 29, 2012

The ISL28110, ISL28210, are single and dual JFET amplifiers featuring low noise, high slew rate, low input bias current and offset voltage, making them the ideal choice for high impedance applications where precision and low noise are important. The combination of precision, low noise, and high speed combined with a small footprint provides the user with outstanding value and flexibility relative to similar competitive parts.

Applications for these amplifiers include precision medical and analytical instrumentation, sensor conditioning, precision power supply controls, industrial controls and photodiode amplifiers.

The ISL28110 single amplifier and the ISL28210 dual amplifiers are available in the 8 Ld SOIC package. All devices are offered in standard pin configurations and operate over the extended temperature range from -40°C to +125°C.

Features

- Wide supply range . . . . . 9V to 40V
- Low voltage noise . . . . . 6nV/ $\sqrt{\text{Hz}}$
- Input bias current . . . . . 2pA
- High slew rate . . . . . 23V/ $\mu\text{s}$
- High bandwidth . . . . . 12.5MHz
- Low input offset . . . . . 300 $\mu\text{V}$ , Max
- Offset drift . . . . . Grade C 10 $\mu\text{V}/^\circ\text{C}$
- Low current consumption . . . . . 2.55mA
- Operating temperature range . . . . . -40°C to +125°C
- Small package offerings in single, and dual
- No phase reversal
- Pb-Free (RoHS compliant)

Applications

- Precision instruments
- Photodiode amplifiers
- High impedance buffers
- Medical instrumentation
- Active filter blocks
- Industrial controls

## Pin Configuration

## Pin Descriptions

ISL28110 (8 LD SOIC)	ISL28210 (8 LD SOIC)	PIN NAME	EQUIVALENT CIRCUIT	DESCRIPTION
3	3	+IN A	Circuit 1	Amplifier A non-inverting input
2	2	-IN A	Circuit 1	Amplifier A inverting input
6	1	V <sub>OUT A</sub>	Circuit 2	Amplifier A output
4	4	V <sub>-</sub>	Circuit 3	Negative power supply
	5	+IN B	Circuit 1	Amplifier B non-inverting input
	6	-IN B	Circuit 1	Amplifier B inverting input
	7	V <sub>OUT B</sub>	Circuit 2	Amplifier B output
7	8	V <sub>+</sub>	Circuit 3	Positive power supply
1, 5, 8		NC		No connect
		PAD		Thermal Pad is electrically isolated from active circuitry. Pad can float, connect to Ground or to a potential source that is free from signals or noise sources.

### NOTES:

1. Add "-T\*" suffix for tape and reel. Please refer to [TB347](#) for details on reel specifications..
2. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
3. For Moisture Sensitivity Level (MSL), please see device information page for [ISL28110](#), [ISL28210](#). For more information on MSL please see techbrief [TB363](#).

**Absolute Voltage Ratings**

Maximum Supply Voltage	42V
Maximum Supply Turn On Voltage Slew Rate	1V/ $\mu$ s
Maximum Differential Input Voltage	33V
Min/Max Input Voltage	$V_- - 0.5V$ to $V_+ + 0.5V$
Max/Min Input Current for Input Voltage $>V_+$ or $<V_-$	$\pm 20mA$
Output Short-Circuit Duration (1 output at a time)	Indefinite
<b>ESD Ratings</b>	
Human Body Model	4000V
Machine Model	400V
Charged Device Model	2000V

**Thermal Information**

Thermal Resistance (Typical)	$\theta_{JA}$ ( $^{\circ}C/W$ )	$\theta_{JC}$ ( $^{\circ}C/W$ )
8 Ld SOIC (Notes 5, 6)		
ISL28110	125	70
ISL28210	120	50
Ambient Operating Temperature Range	-40 $^{\circ}C$ to +125 $^{\circ}C$	
Storage Temperature Range	-65 $^{\circ}C$ to +150 $^{\circ}C$	
Operating Junction Temperature	+150 $^{\circ}C$	
Pb-Free Reflow Profile	see link below	
	<a href="http://www.intersil.com/pbfree/Pb-FreeReflow.asp">http://www.intersil.com/pbfree/Pb-FreeReflow.asp</a>	

**CAUTION:** Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

**NOTES:**

- $\theta_{JA}$  is measured in free air with the component mounted on a high effective thermal conductivity test board with "direct attach" features. See Tech Brief [TB379](#).
- $\theta_{JA}$  is measured with the component mounted on a high effective thermal conductivity test board in free air. See Tech Brief [TB379](#) for details.
- For  $\theta_{JC}$ , the "case temp" location is taken at the package top center.

## Applications Information

### Functional Description

The ISL28110 and ISL28210 are single and dual 12.5 MHz precision JFET input op amps. These devices are fabricated in the PR40 Advanced Silicon-on-Insulator (SOI) bipolar-JFET process to ensure latch-free operation. The precision JFET input stage provides low input offset voltage (300µV max @ +25°C), low input voltage noise (6nV/√Hz), and input current noise that is very low with virtually no 1/f component. A high current complementary NPN/PNP emitter-follower output stage provides high slew rate and maintains excellent THD+N performance into heavy loads (0.0003% @ 10V<sub>p-p</sub> @ 1kHz into 600Ω).

### Operating Voltage Range

The devices are designed to operate over the 9V (±4.5V) to 40V (±20V) range and are fully characterized at 10V (±5V) and 30V (±15V). The JFET input stage maintains high impedance over a maximum input differential voltage range of ±33V. Internal ESD protection diodes clamp the non-inverting and inverting inputs to one diode drop above and below the V+ and V- the power supply rails ("Pin Descriptions" on page 2, CIRCUIT 1).

### Input ESD Diode Protection

The JFET gate is a reverse-biased diode with >33V reverse breakdown voltage which enables the device to function reliably in large signal pulse applications without the need for anti-parallel clamp diodes required on MOSFET and most bipolar input stage op amps. No special input signal restrictions are needed for power supply operation up to ±15V, and input signal distortion caused by nonlinear clamps under high slew rate conditions are avoided. For power supply operation greater than ±16V (>32V), the internal ESD clamp diodes alone cannot clamp the maximum input differential signal to the power supply rails without the risk of exceeding the 33V breakdown of the JFET gate. Under these conditions, differential input voltage limiting is necessary to prevent damage to the JFET input stage.

In applications where one or both amplifier input terminals are at risk of exposure to voltages beyond the supply rails, current limiting resistors may be needed at each input terminal (see Figure 43  $R_{IN+}$ ,  $R_{IN-}$ ) to limit current through the power supply ESD diodes to 20mA.

FIGURE 43. INPUT ESD DIODE CURRENT LIMITING

### JFET Input Stage Performance

The ISL28110, ISL28210 JFET input stage has the linear gain characteristics of the MOSFET but can operate at high frequency with much lower noise. The reversed-biased gate PN gate junction has significantly lower gate capacitance than the MOSFET, enabling input slew rates that rival op amps using bipolar input stages. The added advantage for high impedance, precision amplifiers is the lack of a significant  $1/f$  component of current noise (Figures 15, 16) as there is virtually no gate current.

The input stage JFETs are bootstrapped to maintain a constant JFET drain to source voltage which keeps the JFET gate currents and input stage frequency response nearly constant over the common mode input range of the device. These enhancements provide excellent CMRR, AC performance and very low input distortion over a wide temperature range. The common mode input performance for offset voltage and bias current is shown in Figure 44. Note that the input bias current remains low even after the maximum input stage common mode voltage is exceeded (as indicated by the abrupt change in input offset voltage).

FIGURE 44. INPUT OFFSET VOLTAGE AND BIAS CURRENT vs COMMON MODE INPUT VOLTAGE

### Output Drive Capability

The complementary bipolar emitter follower output stage features low output impedance (Figure 42) and is capable of substantial current drive over the full temperature range (Figures 29, 30) while driving the output voltage close to the supply rails. The output current is internally limited to approximately  $\pm 50mA$  at  $+25^\circ C$ . The amplifiers can withstand a short circuit to either rail as long as the power dissipation limits are not exceeded. This applies to only 1 amplifier at a time for the dual op amp. Continuous operation under these conditions may degrade long term reliability.

### Output Phase Reversal

Output phase reversal is a change of polarity in the amplifier transfer function when the input voltage exceeds the supply voltage. The ISL28110 and ISL28210 are immune to output phase reversal, out to 0.5V beyond the rail ( $V_{ABS MAX}$ ) limit. Beyond these limits, the device is still immune to reversal to 1V beyond the rails but damage to the internal ESD protection diodes can result unless these input currents are limited.

### Maximizing Dynamic Signal Range

The amplifiers maximum undistorted output swing is a figure of merit for precision, low distortion applications. Audio amplifiers are a good example of amplifiers that require low noise and low signal distortion over a wide output dynamic range. When these applications operate from batteries, raising the amplifier supply voltage to overcome poor output voltage swing has the penalty of increased power consumption and shorter battery life. Amplifiers whose input and output stages can swing closest to the power supply rails while providing low noise and undistorted performance, will provide maximum useful dynamic signal range and longer battery life.

Rail-to-rail input and output (RRIO) amplifiers have the highest dynamic signal range but their added complexity degrades input noise and amplifier distortion. Many contain two input pairs, one pair operating to each supply rail. The trade-offs for these are increased input noise and distortion caused by non-linear input bias current and capacitance when amplifying high impedance sources. Their rail-to-rail output stages swing to within a few millivolts of the rail, but output impedances are high so that their output swing decreases and distortion increases rapidly with increasing load current. At heavy load currents the maximum output voltage swing of RRO op amps can be lower than a good emitter follower output stage.

The ISL28110 and ISL28210 low noise input stage and high performance output stage are optimized for low THD+N into moderate loads over the full  $-40^\circ C$  to  $+125^\circ C$  temperature range. Figures 21 and 22 show the 1kHz THD+N unity gain performance vs output voltage swing at load resistances of 2k $\Omega$  and 600 $\Omega$ . Figure 45 shows the unity-gain THD+N performance driving 600 $\Omega$  from  $\pm 5V$  supplies.

FIGURE 45. UNITY-GAIN THD+N vs OUTPUT VOLTAGE vs TEMPERATURE AT  $V_S = \pm 5V$  FOR  $600\Omega$  LOAD

### Power Dissipation

It is possible to exceed the  $+150^\circ C$  maximum junction temperatures under certain load and power supply conditions. It is therefore important to calculate the maximum junction temperature ( $T_{JMAX}$ ) for all applications to determine if power supply voltages, load conditions, or package type need to be modified to remain in the safe operating area. These parameters are related using Equation 1:

$$T_{JMAX} = T_{MAX} + \theta_{JA} \times PD_{MAXTOTAL} \quad (EQ. 1)$$

where:

- $PD_{MAXTOTAL}$  is the sum of the maximum power dissipation of each amplifier in the package ( $PD_{MAX}$ )
- $PD_{MAX}$  for each amplifier can be calculated using Equation 2:

$$PD_{MAX} = V_S \times I_{qMAX} + (V_S - V_{OUTMAX}) \times \frac{V_{OUTMAX}}{R_L} \quad (EQ. 2)$$

where:

- $T_{MAX}$  = Maximum ambient temperature
- $\theta_{JA}$  = Thermal resistance of the package
- $PD_{MAX}$  = Maximum power dissipation of 1 amplifier
- $V_S$  = Total supply voltage
- $I_{qMAX}$  = Maximum quiescent supply current of 1 amplifier
- $V_{OUTMAX}$  = Maximum output voltage swing of the application
- $R_L$  = Load resistance

### ISL28110 and ISL28210 SPICE Model

Figure 46 shows the SPICE model schematic and Figure 47 shows the net list for the SPICE model. The model is a simplified version of the actual device and simulates important AC and DC parameters. AC parameters incorporated into the model are:  $1/f$  and flatband noise voltage, Slew Rate, CMRR, Gain and Phase. The DC parameters are  $I_{OS}$ , total supply current and output voltage swing. The model uses typical parameters given in the “Electrical Specifications” Table beginning on page 4. The AVOL is adjusted for 125dB with the dominant pole at 7Hz. The CMRR is set 120dB,  $f = 280kHz$ . The input stage models the actual device to present an accurate AC representation. The model is configured for ambient temperature of  $+25^\circ C$ .

Figures 48 through 61 show the characterization vs simulation results for the Noise Voltage, Closed Loop Gain vs Frequency, Small Signal 0.1V Step, Large Signal 5V Step Response, Open Loop Gain Phase, CMRR and Output Voltage Swing for  $\pm 5V$  and  $\pm 15V$  supplies.

## Revision History

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please go to web to make sure you have the latest Rev.

DATE	REVISION	CHANGE
8/31/12	FN6639.3	Removed from ordering info MSOP parts ISL28110FUBZ, ISL28110FUZ on page 3. Removed all instances of MSOP throughout document (front page, thermal information, pin descriptions and POD)
8/30/12		Added "No Phase Reversal" to Features on page 1 Removed from ordering info TDFN parts ISL28110FRTZ, ISL28210FRTZ, ISL28110FRTBZ, ISL28210FRTBZ, ISL28110FBZ, ISL28210FBZ on page 3. Figure 47 on page 18 Spice Net List changed -40 to -12 in Input Stage C_CinDif, C_Cin1 and C_Cin2 Removed all instances of TDFN throughout document (front page, thermal information, pin descriptions and POD)
7/14/11	FN6639.2	Converted to new datasheet template. Page 1 Added "Related Literature" and "AN1594: ISL28210SOICEVAL1Z Evaluation Board User's Guide" Page 3 Ordering Information table: Added ISL28210SOICEVAL1Z Evaluation Board
11/29/10	FN6639.1	Removed label on right side of characterization curve, Figure 48 (Input Noise Current).
11/23/10		Page 1 Updated Trademark statement Page 3 Ordering Information: Removed "coming soon" from ISL28110FBZ Page 4 Electrical Specifications: Added ISL28110 IB and IOS specs @ VS=±5V. Page 5 Electrical Specifications: Changed AVOL limits fro V/mV to dB Page 5 Electrical Specifications, Dynamic Performance, Slew Rate: Added "4V Step" to conditions; changed TYP limit from 23V/μs to 20V/μs Page 6 Electrical Specifications, Dynamic Performance, Slew Rate: Added "10V Step" to conditions; changed TYP limit from 23V/μs to 20V/μs Page 6 Electrical Specifications: Added ISL28110 IB and IOS specs @ VS= ±15V. Changed AVOL limits from V/mV to dB. Changed ts, settling time to 0.1% from 0.9μs to 1.3μs and changed ts, settling time to 0.01% from 1.2μs to 1.6μs. Page 7 Replaced Elect Spec table Notes 8 & 9 (Note 8 "Parameters with MIN and/or MAX limits are 100% tested at +25°C, unless otherwise specified. Temperature limits established by characterization and are not production tested./Note 9 Limits established by characterization and are not production tested.") With: "Compliance to datasheet limits is assured by one or more methods: production test, characterization and/or design." Page 8 Characteristic Curves: Added ISL28110 I <sub>B</sub> vs Temperature (Fig 4) Page 8 Characteristic Curves: Added ISL28110 I <sub>OS</sub> vs Temperature (Fig 6) Pages 17-21: Added PSPICE model section
9/13/10	FN6639.0	Initial Release.

## About Intersil

Intersil Corporation is a leader in the design and manufacture of high-performance analog, mixed-signal and power management semiconductors. The company's products address some of the fastest growing markets within the industrial and infrastructure, personal computing and high-end consumer markets. For more information about Intersil or to find out how to become a member of our winning team, visit our website and career page at [www.intersil.com](http://www.intersil.com).

For a complete listing of Applications, Related Documentation and Related Parts, please see the respective product information page. Also, please check the product information page to ensure that you have the most updated datasheet: [ISL28110, ISL28210](#)

To report errors or suggestions for this datasheet, please go to: [www.intersil.com/askourstaff](http://www.intersil.com/askourstaff)

Reliability reports are available from our website at: <http://rel.intersil.com/reports/search.php>
