

ISL28233, ISL28433

Dual and Quad Micropower Chopper Stabilized, RRIO Operational Amplifiers

FN7692
Rev 3.00
July 26, 2011

The ISL28233 and ISL28433 are dual and quad micropower, chopper stabilized operational amplifiers that are optimized for single and dual supply operation from 1.8V to 6.0V and $\pm 0.825V$ to $\pm 3.0V$. Their low supply current of 18 μA and wide input range enable the ISL28233, ISL28433 to be excellent general purpose op amps for a wide range of applications. The ISL28233 and ISL28433 are ideal for handheld devices that operate off 2 AA or single Li-ion batteries.

The ISL28233 is available in 8 Ld MSOP, 8 Ld SOIC and 8 Ld DFN packages. The ISL28433 is available in 14 Ld TSSOP, 14 Ld SOIC and 14 Ld 3mmx4mm TDFN packages. All devices operate over the temperature range of $-40^{\circ}C$ to $+125^{\circ}C$.

- See [AN1575](#), "ISL28433SOICEVAL1Z, ISL28433TSSOPEVAL1Z Evaluation Board User's Guide"

Features

- Low Input Offset Voltage 6 μV , Max.
- Low Offset Drift 0.05 $\mu V/^{\circ}C$, Max.
- Quiescent Current (Per Amplifier) 18 μA , Typ.
- Single Supply Range +1.8V to +6.0V
- Dual Supply Range $\pm 0.825V$ to $\pm 3.0V$
- Low Noise (0.01Hz to 10Hz) 1.0 μV_{p-p} , Typ.
- Rail-to-Rail Inputs and Output
- Input Bias Current 180pA, Max.
- Operating Temperature Range $-40^{\circ}C$ to $+125^{\circ}C$

Applications

- Bi-Directional Current Sense
- Temperature Measurement
- Medical Equipment
- Electronic Weigh Scales
- Precision/Strain Gauge Sensor
- Precision Regulation
- Low Ohmic Current Sense
- High Gain Analog Front Ends

Typical Application

NOTES:

1. Add "-T*" suffix for tape and reel. Please refer to [TB347](#) for details on reel specifications.
2. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
3. For Moisture Sensitivity Level (MSL), please see device information page for [ISL28233](#), [ISL28433](#). For more information on MSL please see techbrief [TB363](#).

FIGURE 39. ISL28233, ISL28433 FUNCTIONAL BLOCK DIAGRAM

Applications Information

Functional Description

The ISL28233 and ISL28433 use a proprietary chopper-stabilized technique (see Figure 39) that combines a 400kHz main amplifier with a very high open loop gain (174dB) chopper amplifier to achieve very low offset voltage and drift ($2\mu\text{V}$, $0.01\mu\text{V}/^\circ\text{C}$ typical) while consuming only $18\mu\text{A}$ of supply current per channel.

This multi-path amplifier architecture contains a time continuous main amplifier whose input DC offset is corrected by a parallel-connected, high gain chopper stabilized DC correction amplifier operating at 100kHz. From DC to $\sim 5\text{kHz}$, both amplifiers are active with DC offset correction and most of the low frequency gain is provided by the chopper amplifier. A 5kHz crossover filter cuts off the low frequency amplifier path leaving the main amplifier active out to the 400kHz gain-bandwidth product of the device.

The key benefits of this architecture for precision applications are very high open loop gain, very low DC offset, and low $1/f$ noise. The noise is virtually flat across the frequency range from a few millihertz out to 100kHz, except for the narrow noise peak at the amplifier crossover frequency (5kHz).

Rail-to-rail Input and Output (RRIO)

The RRIO CMOS amplifier uses parallel input PMOS and NMOS that enable the inputs to swing 100mV beyond either supply rail. The inverting and non-inverting inputs do not have back-to-back input clamp diodes and are capable of maintaining high input impedance at high differential input voltages. This is effective in eliminating output distortion caused by high slew-rate input signals.

The output stage uses common source connected PMOS and NMOS devices to achieve rail-to-rail output drive capability with 17mA current limit and the capability to swing to within 20mV of either rail while driving a $10\text{k}\Omega$ load.

IN+ and IN- Protection

All input terminals have internal ESD protection diodes to both positive and negative supply rails, limiting the input voltage to within one diode beyond the supply rails. For applications where either input is expected to exceed the rails by 0.5V , an external series resistor must be used to ensure the input currents never exceed 20mA (see Figure 40).

FIGURE 40. INPUT CURRENT LIMITING

Layout Guidelines for High Impedance Inputs

To achieve the maximum performance of the high input impedance and low offset voltage of the ISL28233 and ISL28433 amplifiers, care should be taken in the circuit board layout. The PCB board surface must remain clean and free of moisture to avoid leakage currents between adjacent traces. Surface coating of the circuit board will reduce surface moisture and provide a humidity barrier, reducing parasitic resistance on the board.

High Gain, Precision DC-Coupled Amplifier

The circuit in Figure 41 implements a single-stage DC-coupled amplifier with an input DC sensitivity of under 100nV that is only possible using a low VOS amplifier with high open loop gain. High gain DC amplifiers operating from low voltage supplies are not practical using typical low offset precision op amps. For example, a typical precision amplifier in a gain of $10\text{kV}/\text{V}$ with a $\pm 100\mu\text{V}$ V_{OS} and offset drift $0.5\mu\text{V}/^\circ\text{C}$ of a low offset op amp would produce a DC error of $>1\text{V}$ with an additional $5\text{mV}/^\circ\text{C}$ of temperature dependent error making it difficult to resolve DC input voltage changes in the mV range.

The $\pm 6\mu\text{V}$ max V_{OS} and $0.05\mu\text{V}/^\circ\text{C}$ max temperature drift of the ISL28233, ISL28433 produces a temperature stable maximum DC output error of only $\pm 60\text{mV}$ with a maximum output temperature drift of $0.5\text{mV}/^\circ\text{C}$. The additional benefit of a very low $1/f$ noise corner frequency and some feedback filtering enables DC voltages and voltage fluctuations well below 100nV to be easily detected with a simple single stage amplifier.

FIGURE 41. HIGH GAIN, PRECISION DC-COUPLED AMPLIFIER

ISL28233, ISL28433 SPICE Model

Figure 42 shows the SPICE model schematic and Figure 43 shows the net list for the ISL28233, ISL28433 SPICE model. The model is a simplified version of the actual device and simulates important parameters such as noise, Slew Rate, Gain and Phase. The model uses typical parameters from the “Electrical Specifications Table” on page 5. The poles and zeroes in the model were determined from the actual open and closed-loop gain and phase response. This enables the model to present an accurate AC representation of the actual device. The model is configured for ambient temperature of $+25^\circ\text{C}$.

Figures 44 through 51 show the characterization vs simulation results for the Noise Density, Frequency Response vs Close Loop Gain, Gain vs Frequency vs C_L and Large Signal Step Response (4V).

Revision History

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please go to web to make sure you have the latest Rev.

DATE	REVISION	CHANGE
5/31/11	FN7692.3	Changed minimum operating supply voltage from +1.65V to +1.8V throughout entire datasheet.
3/24/11		Added to Ordering Information Table on page 2 - ISL28233SOICEVAL1Z, ISL28433TSSOPEVAL1Z, ISL28433SOICEVAL1Z
12/2/10	FN7692.2	Added "Related Literature" on page 1 Removed "Coming Soon" from ISL28233FRZ device (8 Ld DFN) in "Ordering Information" on page 2. Corrected Thermal Pad Pin Name in "Pin Descriptions" on page 4 from "NC" to "PAD" Corrected θ_{JA} note for TDFN package in "Thermal Information" on page 5 from " θ_{JA} is measured with the component mounted on a high effective thermal conductivity test board in free air. See Tech Brief TB379 for details." To " θ_{JA} is measured in free air with the component mounted on a high effective thermal conductivity test board with "direct attach" features. See Tech Brief TB379." (since TDFN has thermal pad; TDFN package option not released yet)
10/27/10	FN7692.1	Changed Part Marking for ISL28233FUZ from 8233Z to 233FZ in "Ordering Information" table on page 2 Added ISL28233 in DFN package to Ordering Information" table on page 2. On page 6, removed Note 8. Changed note in MIN MAX columns of "Electrical Specifications" table from: "Parameters with MIN and/or MAX limits are 100% tested at +25°C, unless otherwise specified. Temperature limits established by characterization and are not production tested." To: "Compliance to datasheet limits is assured by one or more methods: production test, characterization and/or design."
8/25/10	FN7692.0	Initial Release.

Products

Intersil Corporation is a leader in the design and manufacture of high-performance analog semiconductors. The Company's products address some of the industry's fastest growing markets, such as, flat panel displays, cell phones, handheld products, and notebooks. Intersil's product families address power management and analog signal processing functions. Go to www.intersil.com/products for a complete list of Intersil product families.

*For a complete listing of Applications, Related Documentation and Related Parts, please see the respective device information page on intersil.com: [ISL28233, ISL28433](http://www.intersil.com/products)
