

ISL8115EVAL2Z

Synchronous Buck Converter

AN1882
Rev 2.00
February 5, 2014

Introduction

ISL8115EVAL2Z is a Synchronous Buck Converter implementing Intersil's wide input range PWM controller ISL8115. Utilizing voltage mode control with input feed forward, the ISL8115EVAL2Z maintains a constant loop gain for optimal transient response, especially for applications with a wide input voltage range. For a more detailed description of the ISL8115 functionality, refer to the [ISL8115](#) data sheet.

This application note includes the test setup, typical performance waveforms, schematic, layout and bill of materials (BOM).

Evaluation Board Specifications

TABLE 1. EVALUATION BOARD ELECTRICAL SPECIFICATIONS

SPEC	DESCRIPTION	MIN	TYP	MAX	UNIT
V _{IN}	Board Input Range	25	28	36	V
V _{OUT}	Output Voltage		5		V
I _{OUT}	Output Rated Current		20		A
I _{OC}	Overcurrent Threshold		22		A
F _{SW}	Switch Frequency		220		kHz
Input UVP	Rising threshold		22.4		V
	Falling threshold		24.2		V
η	Efficiency at 50% load		92.53		%

FIGURE 1. ISL8115EVAL2Z EVALUATION BOARD

ISL8115 Key Features

- Wide V_{IN} range operation: 2.97V to 36V; up to 5.5V output and 30A load current per phase.
- Fast transient response
 - Voltage-mode PWM leading-edge modulation with non-linear control
 - Input voltage feed-forward
- Integrated 5V high speed 4A MOSFET gate drivers
 - Internal bootstrap diode
- Oscillator programmable from 150kHz to 1.5MHz
 - Frequency synchronization to external clock signal
- Diode emulation mode for light load efficiency improvement
- Output OVP/UVP; OCP and OTP
- Power-good open drain output
- Adjustable soft-start
- Pre-bias start-up function
- Excellent output voltage regulation
 - 0.6V ±1.0% internal reference (-40°C ~ +125°C)
 - 0.6V ±0.7% internal reference (-40°C ~ +105°C)
 - Differential voltage sensing

Applications

- Power supply for datacom/telecom and POL
- Wide input voltage range buck regulators
- High current density power supplies RF power amplifier bias compensation

Recommended Equipment

- Input power source up to 36V supply voltage with 125W power supply ability.
- Electronic load with 100W power sinking ability
- Voltmeters and ammeters
- 100MHz quad-trace oscilloscope

FIGURE 2. ISL8115EVAL2Z TEST SET-UP

Quick Test Setup

1. Ensure that the Evaluation board is correctly connected to the power supply and the electronic load prior to applying any power. Please refer to Figure 2 for proper set-up.
2. Set the input voltage to 28V, turn on the power supply and observe output voltage. The output voltage should variation should be within 5%.
3. Adjust load current within 20A. The output voltage variation should be within 5%.
4. Use oscilloscope to observe output ripple voltage and phase node ringing. For accurate measurement, please refer to Figure 3 for proper set-up.

Note: Test points TP1; TP3; TP8; TP9 are for voltage measurement only. Do not allow high current through these test points.

Probe Set-up

Design Guide

The ISL8115EVAL2Z is optimized for 25V to 36V input voltage range. However, the evaluation board can be modified to support multiple applications due to the customer requirements. Please refer to the datasheet for the detailed information.

Output Voltage Adjustment

The output voltage can be set by the resistor R4, R1. In order to keep the existing compensation parameters unchanged, adjust R4 to set the output voltage by the following Equation 1:

$$R4 = \frac{0.6V \times R1}{V_{out} - 0.6V} \tag{EQ. 1}$$

VMON monitors the output for UVP and OVP, the resistor divider value of R11/R8 should be the same with the R1/R4.

Synchronization

ISL8115EVAL2Z board can be synchronized with an external clock. Apply a clock signal (10% to 90% duty cycle) in the range of 150kHz to 1.5MHz to the FSET pin makes the internal frequency synchronized with the external clock. Please remove R27 when the sync function is implemented.

Typical Performance Curves Unless otherwise specified, the input voltage is 28V.
