DIGI IX15

Programmable gateway connects Digi XBee-enabled devices to remote applications over cellular and Ethernet

The versatile Digi IX15 functions as both gateway and router for customers seeking lower-cost, quicker-to-market alternatives to chip-down DIY designs for networking operations. The industrial-grade Digi IX15 connects Digi XBee® modules to cloud applications over cellular, providing the easiest path to Internet connectivity for the Digi XBee ecosystem of hardware, software, services and award-winning tools.

With C1D2 certification and rugged enclosure, Digi IX15 is ideal for the harsh, corrosive environments found in oil and gas, water/wastewater, solar, agriculture and other industrial applications. For developers needing a highly secure, common platform to cut costs and time-to-market, Digi IX15 reduces risk and drives project efficiencies.

The Digi IX15 gateway includes a simple, open source Python

development environment that enables custom applications to perform edge computing locally while providing the most optimal, resilient connectivity between your XBee network and cloud-based applications.

Gain critical insights into your deployed devices and manage your network with **Digi Remote Manager®** (Digi RM) — the command center for your deployment. Digi RM is a cloud-based solution that facilitates easy setup, mass configuration, maintenance and visibility into the health of your network, whether you deploy dozens or thousands of devices.

In the event of an interruption to your primary network connection, Digi RM also provides secure terminal access for out-of-band management of edge devices via serial port and command-line interface.
