

1A step down switching regulator

Features

- Up to 1A step down converter
- Operating input voltage from 8V to 55V
- Precise 5.1V reference voltage
- Output voltage adjustable from 0.5V to 50V
- Switching frequency adjustable up to 300kHz
- Voltage feedforward
- Zero load current operation
- Internal current limiting (pulse-by-pulse and hiccup mode)
- Protection against feedback disconnection
- Thermal shutdown

Description

The L4976 is a step down monolithic power switching regulator delivering 1A at a voltage between 3.3V and 50V (selected by a simple external divider). Realized in BCD mixed technology, the device uses an internal power D-MOS transistor (with a typical $R_{ds(ON)}$ of 0.25Ω) to obtain very high efficiency and high switching speed. A switching frequency up to 300kHz is achievable (the maximum power dissipation of the packages must be observed). A wide input voltage range between 8V to 55V and output voltages regulated from 3.3V to 40V cover the majority of today's applications. Features of this new generations of DC-DC converter include pulse-by-pulse current limit, hiccup mode for short circuit protection, voltage feedforward regulation, protection against feedback loop disconnection and thermal shutdown. The device is available in plastic dual in line, MINIDIP 8 for standard assembly, and SO16W for SMD assembly.

2.2 Pin description

Table 1. Pin description

N° Pin		Name	Description
DIP8	SO16W (1)		
1	2	GND	Ground
2	3	VREF	5.1V Reference voltage with 20mA current capability.
3	4	OSC	An external resistor connected between the unregulated input voltage and this pin and a capacitor connected from this pin to ground fix the switching frequency. (Line feed forward is automatically obtained)
4	5, 6	OUT	Stepdown regulator output.
5	11	VCC	Unregulated DC input voltage.
6	12	BOOT	A capacitor connected between this pin and OUT allows to drive the internal VDMOS.
7	13	COMP	E/A output to be used for frequency compensation.
8	14	FB	Stepdown feedback input. Connecting directly to this pin results in an output voltage of 3.3V. An external resistive divider is required for higher output voltages.

1. Pins 1, 7, 8, 9, 10, 15 and 16 are not internally, electrically connected to the die.

6 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a Lead-free second level interconnect . The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com
