Device Overview

Summary

The LE79271 Next Generation Subscriber Line Interface Circuit (SLIC) device, in combination with an LE792388 SLAC device, implements a DSL friendly, high density universal telephone line interface. This enables the design of a low cost, high performance, fully software programmable line interface with worldwide applicability. All AC, DC, and signaling parameters are programmable. Additionally, the NGCC chip-set has integrated self-test and line-test capabilities to resolve faults to the line or line circuit.

For product comparison, please consider: [LE79272](#)

Additional Features

Designed to minimize POTS transients, optimizing CRC performance for triple play applications

Best-in-class GR-844 equivalent testing

- Fully validated test primitives and host routines
- Guaranteed performance parameters

Optimized for best-in-class density

Monitor of two-wire interface voltages and currents supports:

- Voice transmission
- Internal ringing generation
- Programmable DC feed characteristic
- Current limited and independent of battery
- Selectable off-hook and ground-key thresholds
- Subscriber line diagnostics
- Leakage and loop resistance
- Line capacitance and bell capacitance
- Foreign voltage sensing
- Power cross and fault detection

Supports 85 Vrms internal ringing

- Supports balanced and unbalanced ringing

3.3 V and battery supplies

- Supports two negative and one positive battery

Dual battery operation for system power saving

- Automatic battery switching
- Intelligent thermal management

Compatible with inexpensive protection networks

Metering capable

- 12 kHz and 16 kHz
- Smooth polarity reversal

Tip-open mode supports ground start signaling

Integrated test load switch

5 REN with DC offset

Features with Le79124 VCP

- 72 channel call aggregation
- GR-844 equivalent line testing

Parametrics

Name	Value
Application	NGCC SLIC
Series	VE792
Loop Length	Long
Battery Topology	External
Output Voltage (V) max	150
Number of Ports	1
