

Features

- **Cost Optimized Single Channel FXS Solution**
 - Smaller, 36-pin 4x6 mm QFN package
 - Low cost, 2-Layer PCB Reference Designs
- **Software compatible with equivalent feature set to the Le9641/Le9651**
- **Pin-Selectable PCM/SPI or ZSI Interfaces**
 - Single port 4-wire ZSI control simplifies board routing
 - Compatible with numerous VoIP processors and SoC solutions
- **Le9643 95V Peak Battery Designs**
 - Up to 60-VRMS with up to 3 REN load
 - Up to 50-VRMS with up to 5 REN load
- **Le9653 150V Peak Battery Designs**
 - Up to 100-VRMS with up to 5 REN load
- **Energy Efficient Switching Regulator Architectures**
 - Le9643
 - Buck-Boost fixed tracking
 - Inverting-Boost tracking
 - Le9653
 - High Voltage Flyback tracking
 - High Voltage Inverting-Boost tracking
 - Consistent with Code of Conduct on Energy Consumption of Broadband Equipment
- **VoicePath SDK and VP-API-II Software available to implement FXS functions**
- **VeriVoice Professional Test Suite Software**
 - Comprehensive subscriber loop testing, per *Telcordia GR-909-CORE / TIA-1063*
- **VeriVoice Manufacturing Test Package (VVMT)**
 - Facilitates factory testing of assembled boards
- **Complete Wideband or Narrowband BORSCHT functionality**
- **Worldwide Programmability**

Ordering Information

| Device OPN | Device Type | Package | Packing |
|------------|---------------|-----------|-----------|
| Le9643AQCT | SLIC, Tracker | 4x6mm QFN | Tape&Reel |
| Le9643AQC | SLIC, Tracker | 4x6mm QFN | Tray |
| Le9653AQCT | SLIC, Tracker | 4x6mm QFN | Tape&Reel |
| Le9653AQC | SLIC, Tracker | 4x6mm QFN | Tray |

These Green packages meet RoHS 2 Directive 2011/65/EU of the European Council to minimize the environmental impact of electrical equipment.

Applications

- **Fixed Wireless (LTE) Gateways**
- **DSL Residential Gateways and Integrated Access Devices (IADs)**
- **Cable Embedded Multimedia Terminal Adapters (eMTAs)**
- **PON Single Family Units (SFU)**
- **Fiber-to-the-premise (FTTX) solutions**
- **Analog Telephone Adapters (ATAs)**

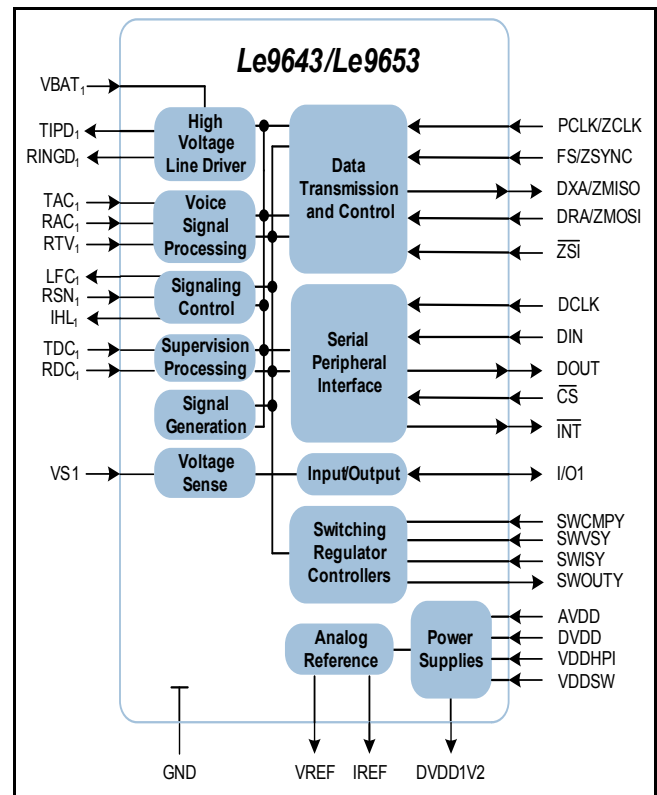

Figure 1 - Le9643/Le9653 Block Diagram

miSLIC™ Series Solution Overview

The sixth-generation *miSLIC* line interface solution consists of a *miSLIC* device, *VoicePath API-II (VP-API-II)* Software, and *Profiles* Data Structures. To support the *miSLIC* device, Microsemi offers comprehensive software and hardware collateral packages, including 2-layer printed circuit board reference designs.

The *VoicePath API-II (VP-API-II)* software initializes the FXS port coefficient data containing application or country-specific AC and DC parameters, ringing and other signaling characteristics, and configures the switching power supply. *VP-API-II* resides on the customer's VoIP processor or SoC and provides high-level control over the telephony functions. *VP-API-II* offers a seamless migration between products utilizing its common software architecture and interfaces with the Microsemi *VeriVoice Professional Test Suite Software*.

A *Microsoft® Windows®* GUI (Graphical User Interface) application, *VoicePath Profile Wizard (VP Profile Wizard)*, allows the user to select the operating parameters of the FXS channels and to automatically generate the sets of data structures, called *Profiles*, that are required by the *VP-API-II* for integration with the VoIP host software.

The Le9643/Le9653 *miSLIC* device implements a universal telephone line interface with pin-selectable PCM and SPI or ZSI serial digital interfaces. All AC, DC, and signaling parameters are fully programmable via the PCM and SPI or reduced pin-count ZSI interfaces.

The switching regulator controller generates the high voltage needed for efficiently powering and ringing analog telephones. The Le9643 supports two switching regulator architectures, both are capable of ringing $85-V_{PK}$; a Buck-Boost fixed tracking switching regulator architecture which uses a fixed voltage for ringing signals, or an Inverting-Boost switcher circuit which tracks the ringing voltage during ringing. The Le9653 supports two switching regulator architectures, both are capable of ringing $140-V_{PK}$; a High Voltage Flyback or a High Voltage Inverting-Boost switcher circuit both of which track the ringing voltage during ringing. The battery tracks the DC feed with both architectures. The switching regulators provide high efficiency in all operating states and corresponding low power consumption.

The Le9643/Le9653 utilizes the *VeriVoice Professional Test Suite Software* to resolve line circuit faults and to provide line diagnostics. The integrated digital access to line information such as AC and DC line voltages and Metallic or Longitudinal currents is crucial for remote applications where dedicated test hardware is not cost effective.

Additionally, the *VeriVoice Manufacturing Software (VVM)* package provides test functions intended to facilitate factory testing, eliminating the need for expensive external test equipment.

[Figure 1](#) shows a high-level solution diagram with a *Le9643/Le9653* device, *VP-API-II* and *Profiles*.

Le9643/Le9653 Features

| Feature | Le9643 | Le9653 |
|--|----------------------------|-----------------------------|
| Package | | |
| Package | 4x6 mm, 36-pin QFN | 4x6 mm, 36-pin QFN |
| Temperature Range | -40°C to +85°C | -40°C to +85°C |
| Compatible with 2-layer PCB designs | Yes | Yes |
| Software | | |
| <i>VoicePath SDK and VP-API-II</i> | Yes | Yes |
| <i>VeriVoice Professional Test Suite Software</i> | Yes | Yes |
| <i>VeriVoice Manufacturing Test Package</i> | Yes | Yes |
| Interface | | |
| ZSI Mode | Yes | Yes |
| PCM/SPI Mode | Yes | Yes |
| Power Supply | | |
| Peak Battery Voltage | 95V | 150V |
| Fixed Buck Boost Power Supply Architecture | 50V _{RMS} - 5 REN | N/A |
| Inverting Boost Power Supply Architecture | 50V _{RMS} - 5 REN | 100V _{RMS} - 5 REN |
| Flyback Power Supply Architecture | N/A | 100V _{RMS} - 5 REN |
| DC Feed | | |
| Low Power Idle Mode | Yes | Yes |
| Power/service denial mode | Yes | Yes |
| On-hook transmission | Yes | Yes |
| Programmable DC Feed Characteristics | Yes | Yes |
| Programmable Maximum Loop Current | 30mA | 45mA |
| Supervision | | |
| Programmable Loop Start Thresholds | Yes | Yes |
| Programmable Ground Start Threshold | Yes | Yes |
| Programmable on/off hook de-bounce times | Yes | Yes |
| Ringing | | |
| Peak Ringing Voltage - Fixed Buck Boost Power Supply Architecture | 85V | N/A |
| Peak Ringing Voltage - Inverting Boost Power Supply Architecture | 85V | 140V |
| Peak Ringing Voltage - Flyback Power Supply Architecture | N/A | 140V |
| Programmable Ringing waveform, frequency, DC Offset and amplitude | Yes | Yes |
| Programmable Ring Cadence | Yes | Yes |
| Integrated ring trip filter and software, manual or automatic ring trip mode | Yes | Yes |
| Telephony | | |
| Wideband -Narrowband Operation | Yes | Yes |
| A-law/μ-law and linear coding selection | Yes | Yes |
| Call progress tone generation | Yes | Yes |
| Howler tone generation | Yes | Yes |
| DTMF Generation | Yes | Yes |
| Two-wire AC impedance | Yes | Yes |
| Transhybrid balance impedance | Yes | Yes |
| Transmit and receive gains and equalization | Yes | Yes |

VoicePath Application Programming Interface II (VP-API-II)

The Microsemi *VoicePath Application Programming Interface II (VP-API-II)* is a C source code module that provides a standard software interface for controlling, testing, and passing digitized voice through a set of subscriber lines using the Microsemi family of voice termination devices.

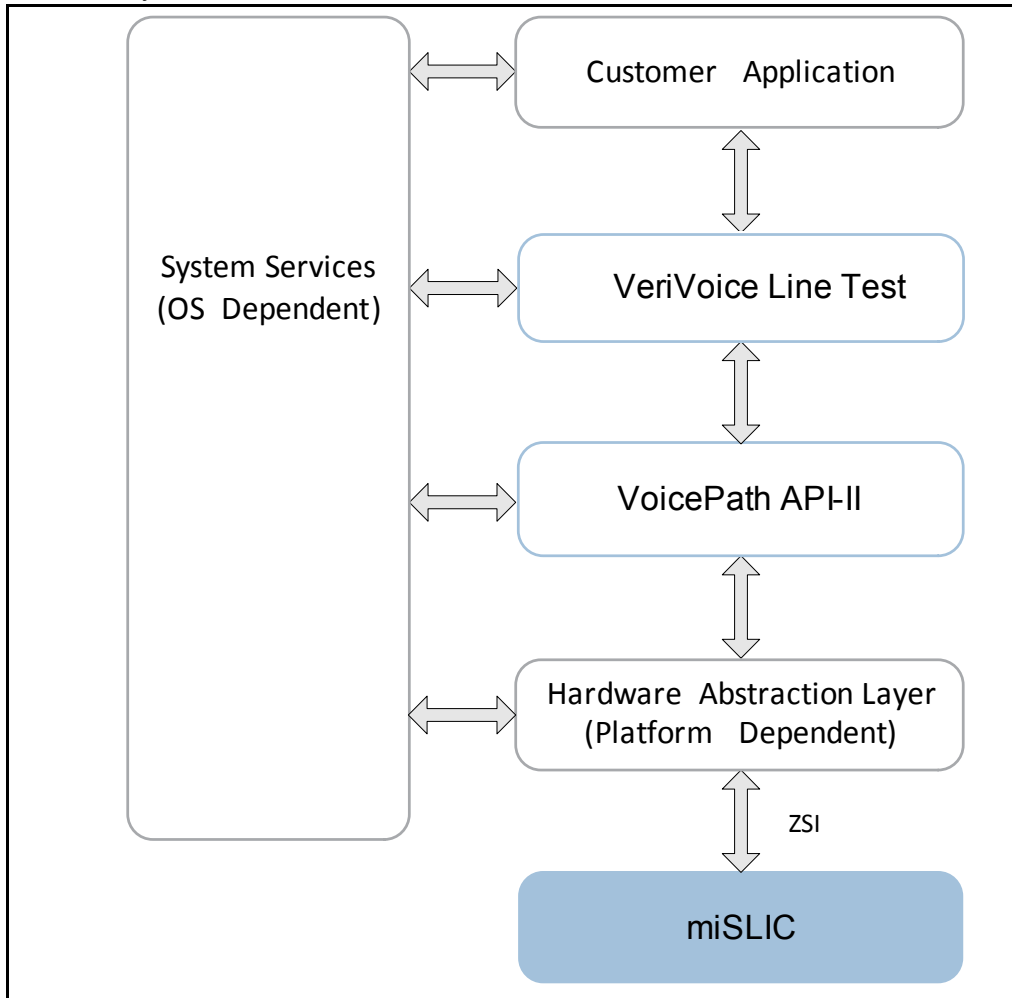

Figure 2 - VP-API-II Software Architecture

Customer Application

This block represents the user's line management module that performs tasks such as initializing the system, configuring lines, changing the line states in response to line events and other inputs, switching digitized voice traffic, etc. Microsemi provides example implementations of this layer as part of the *VoicePath SDK*.

VoicePath API-II

The *VoicePath API-II* is the core component of the Microsemi *VoicePath SDK*. This software module runs on the host microprocessor that controls one or more Microsemi voice telephony devices.

Hardware Abstraction Layer

The Hardware Abstraction Layer (HAL) provides access to Microsemi voice telephony devices through the SPI or multiplexed ZSI interface. The HAL software is platform-dependent and must be implemented by the *VP-API-II* user. Microsemi provides example HAL source code with the *VoicePath SDK*.

Test Packages

VeriVoice Professional Test Suite Software

VeriVoice Professional Test Suite Software is an advanced test suite that provides the ability for the user to perform the *Telcordia GR-909-CORE / TIA-1063* diagnostic testing for testing the physical subscriber loop. Additionally the *VeriVoice Professional Test Suite Software* provides for a series of inward looking tests so the operation of the FXS circuit and switching regulator can be verified.

The *VeriVoice Professional Test Suite* features the following tests:

- Line Voltage: Checks for hazardous and foreign AC and DC voltages.
- Receiver Off-Hook: Checks for longitudinal fault, off-hook resistive fault and receiver off-hook.
- Regular REN: Tests the impedance of the line and returns a fail if the Ringer Equivalence Number (REN) is too low or high.
- Electronic REN: Provides REN Tip to Ring, Tip to ground and Ring to ground based on capacitance
- Resistive Fault: Measures three-element resistance.
- GR-909-CORE / TIA-1063: Performs all of the *GR-909-CORE* outward tests in the correct sequence.
- Capacitance: Measures three element capacitance
- Master Socket: Detects master socket terminations
- Cross Connect: Detects cross connected FXS
- Loop back: Enables receive-to-transmit signal loop-back using two different methods
- Read Loop Conditions: Measures DC voltages between Tip and Ring, Tip to ground, Ring to ground, and VBAT to ground. Also measures metallic and longitudinal DC line currents in supported States.
- Read Battery Conditions: Reads the battery voltages connected to the line circuit.
- DC Voltage Self-Test: Verifies that the line circuit has the ability to drive the voltage ranges required for the normal operation of the line circuit.
- DC Feed Self-Test Measures the voltage and current across a known internal test termination using the *DC Profile* that has been programmed.
- Ringing Self-Test Verifies ring signal generation, drive capability, and ring trip.
- On/Off-Hook Self-Test Creates on-hook and off-hook conditions on the line using the internal test termination and verifies that they are properly reported.
- Draw and Break Dial Tone Verifies the capability of the line circuit to detect off-hook and on-hook as well as the voice path to/from the host
- Read Loop Conditions - Extended Reads the loop conditions of the current state of the line without disturbing the T/R feed conditions. Measures AC and DC voltages Tip and Ring, Tip to ground and Ring to ground. Measures VBAT to ground. Also measures metallic and longitudinal AC and DC line currents in supported States.

Manufacturing Testing

The Le9643 and Le9653 are supported by the *VeriVoice Manufacturing Test Package (VVMT)*. The *VeriVoice™ Manufacturing Test Package* is a stand-alone, self contained test package intended to facilitate factory testing of new products based on Microsemi miSLIC™ Series of Voice Solutions. The software is distributed as a portable, platform-independent C source code module. The software is architected as a rapid set of tests which provide thorough test cover and eliminates the need for expensive test equipment.

Line Interface Circuit

Figure 3 shows a typical line interface circuit for the Le9643/53. The ZSI control interface is illustrated. Consult Microsemi for the most recent reference design.

Collateral

The following documentation is available on the Microsemi website www.microsemi.com/voice-line-circuits.

Documentation

- Le9643 Data Sheet *Document Number 157127*
- Le9653 Data Sheet *Document Number 157152*
- Le9643/Le9653 Product Brief *Document Number 157126*
- VP-API-II Reference Guide *Document Number 143271 (included with software download)*
- Line Test API (LT-API) User's Guide *Document Number 081470 (included with software download)*
- VeriVoice Professional Data Sheet *Document Number 1457775 (included with software download)*

Application Notes

- EMI Radiated Immunity *Document Number 146127*
- Two Layer PCB Design *Document Number 146669*
- VP-API-II Based DTMF Detection *Document Number 154520*

IBIS Models

- Le9643 & Le9653 IBIS Models, available at www.microsemi.com/voice-line-circuits.

Development Hardware

Contact your sales representative for the latest Le9643 and Le9653 reference design hardware.

ZLR964321L SM2 Line Module

- *ZLR964321L Line Module* - one Le9643 operating in ZSI mode with a 1 FXS 12 V Buck-Boost battery supply

ZLR965324H SM2 Line Module

- *ZLR965324H Line Module* - one Le9643 and one Le9653 in PCM/SPI mode. The Le9643 is configured with a 1 FXS 12V Inverting-Boost battery supply and the Le9653 is configured with a 1 FXS 12V High Voltage Inverting-Boost battery.

Development Software

URLs for the following software is available on the Microsemi website www.microsemi.com/voice-line-circuits.

Le71SK0002 VoicePath API-II Software

- The *VP-API-II* is a set of C source used by the host application to interface to MSCC Voice Line Circuits. A signed Software License Agreement (SLA) is required.

Le71SDKAPIL API-II Lite

- The *VP-API-II Lite* is identical to *VP-API-II*, with reduced functionality. *VP-API-II Lite* does not support tone or ringing cadencing, Caller ID, or Metering signal generation. This software is available without an SLA.

ZL880SLVVP VeriVoice Professional Test Suite

- *VeriVoice™ Test Suite* provides GR909 Line Test Suite and additional inward tests

ZLS880VVMT VeriVoice Manufacturing Test Package

- The *VeriVoice™ Manufacturing Test Package* is a stand-alone, self contained test package intended to facilitate factory testing of new products based on Microsemi CPMG's *miSLIC™ Series*.
