The LG1 can drive two G1's or G2's as shown above. The LG1 has a response time of 30 μ s over its entire band of control voltage. The response time of the G1 or G2 is typically 60-100 μ s.

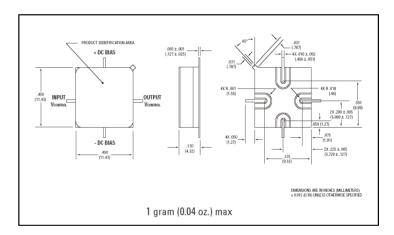

If a positive control voltage is desired the following circuit may be used. The op-amp buffer can also generate a very low source resistance in the order of thousands of an ohm.
