DESCRIPTION

The LT1252 is a low cost current feedback amplifier for video applications. The LT1252 is ideal for driving low impedance loads such as cables and filters. The wide bandwidth and high slew rate of this amplifier make driving RGB signals between PCs and workstations easy. The linearity of the LT1252 is outstanding; it is unsurpassed for driving composite video.

The LT1252 is available in the 8-pin DIP and the S8 surface mount package. For higher performance and shutdown operation, see the LT1227. For dual and quad amplifiers with similar performance see the LT1253/LT1254.

TYPICAL APPLICATION

$$A_V = 1 + \frac{R_F}{R_G} \quad BW = 100\text{MHz}$$

AT AMPLIFIER OUTPUT.

LT1252CN8: $T_J = T_A + (P_D \times 100^{\circ}\text{C}/\text{W})$

LT1252CS8: $T_J = T_A + (P_D \times 150^{\circ}\text{C}/\text{W})$

Note 2: T_J is calculated from the ambient temperature T_A and power dissipation P_D according to the following formulas:
