

FEATURES

- Operates from a Single 5V Supply
- Low Supply Current: $I_{CC} = 220\mu\text{A}$
- ESD Protection Over $\pm 10\text{kV}$
- Available in 16-Pin SOIC Narrow Package
- Uses Small Capacitors: $0.1\mu\text{F}$
- Operates to 120kbaud
- Output Overvoltage Does Not Force Current Back into Supplies
- RS232 I/O Lines Can Be Forced to $\pm 25\text{V}$ Without Damage
- Pin Compatible with LT1181A and MAX232A

APPLICATIONS

- Notebook Computers
- Palmtop Computers

DESCRIPTION

The LTC[®]1383 is an ultra-low power 2-driver/2-receiver RS232 transceiver that operates from a single 5V supply. The charge pump requires only four space-saving $0.1\mu\text{F}$ capacitors. The supply current (I_{CC}) of the transceiver is only $220\mu\text{A}$ with driver outputs unloaded.

The LTC1383 is fully compliant with all data rate and overvoltage RS232 specifications. The transceiver can operate up to 120kbaud with a 2500pF , $3\text{k}\Omega$ load. Both driver outputs and receiver inputs can be forced to $\pm 25\text{V}$ without damage and can survive multiple $\pm 10\text{kV}$ ESD strikes.

 LTC and LT are registered trademarks of Linear Technology Corporation.

TYPICAL APPLICATION

Quiescent Supply Current vs Temperature

LTC1383 • TA02

ABSOLUTE MAXIMUM RATINGS

Supply Voltage (V_{CC}) 6V

Input Voltage

Driver $-0.3V$ to $V_{CC} + 0.3V$

Receiver $-25V$ to $25V$

Digital Input $-0.3V$ to $V_{CC} + 0.3V$

Output Voltage

Driver $-25V$ to $25V$

Receiver $-0.3V$ to $V_{CC} + 0.3V$

Short-Circuit Duration

V^+ 30 sec

V^- 30 sec

Driver Output Indefinite

Receiver Output Indefinite

Operating Temperature Range

LTC1383C $0^\circ C$ to $70^\circ C$

LTC1383I $-40^\circ C$ to $85^\circ C$

Storage Temperature Range $-65^\circ C$ to $150^\circ C$

Lead Temperature (Soldering, 10 sec) $300^\circ C$

LTC1383 • TPC03

TYPICAL PERFORMANCE CHARACTERISTICS

PIN FUNCTIONS

V_{CC}: 5V Input Supply Pin. This pin should be decoupled with a 0.1μF ceramic capacitor.

GND: Ground Pin.

V⁺: Positive Supply Output (RS232 Drivers). $V^+ \cong 2V_{CC} - 2V$. This pin requires an external capacitor $C = 0.1\mu F$ for charge storage. The capacitor may be tied to ground or V_{CC} . With multiple devices, the V^+ and V^- pins may share a common capacitor. For large numbers of devices, increasing the size of the shared common storage capacitors is recommended to reduce ripple.

V⁻: Negative Supply Output (RS232 Drivers). $V^- \cong -(2V_{CC} - 2V)$. This pin requires an external capacitor $C = 0.1\mu F$ for charge storage.

C1⁺, C1⁻, C2⁺, C2⁻: Commutating Capacitor Inputs. These pins require two external capacitors $C = 0.1\mu F$: one from C1⁺ to C1⁻ and another from C2⁺ to C2⁻. To maintain

charge pump efficiency, the capacitor's effective series resistance should be less than 2Ω.

TR IN: RS232 Driver Input Pins. Inputs are TTL/CMOS compatible. The inputs of unused drivers can be left unconnected since 300k input pull-up resistors to V_{CC} are included on chip.

TR OUT: Driver Outputs at RS232 Voltage Levels. The driver outputs are protected against ESD to ±10kV for human body model discharges.

RX IN: Receiver Inputs. These pins can be forced to ±25V without damage. The receiver inputs are protected against ESD to ±10kV for human body model discharges. Each receiver provides 0.4V of hysteresis for noise immunity.

RX OUT: Receiver Outputs with TTL/CMOS Voltage Levels.
