

16-Channel PMBus Low-Voltage Power System Manager

FEATURES

- Sequence, Trim, Margin and Supervise 16 Power Supplies
- Manage Faults, Monitor Telemetry and Create Fault Logs
- PMBus Compliant Command Set
- Supported by LTpowerPlay® GUI
- Margin or Trim Supplies to within 0.5% of Target
- Fast OV/UV Supervisors per Channel
- Coordinate Sequencing and Fault Management Across Multiple ADI PSM Devices
- Automatic Fault Logging to Internal EEPROM
- Operate Autonomously without Additional Software
- Internal Temperature and Input Voltage Supervisors
- Accurate Monitoring of 16 Output Voltages, Two Input Voltages and Internal Die Temperature
- I²C/SMBus Serial Interface
- Powered from 3.13V to 3.47V
- Programmable Watchdog Timer
- Available in 144-Pin 12mm × 12mm BGA Package

APPLICATIONS

- Computers and Network Servers
- Industrial Test and Measurement
- High Reliability Systems
- Medical Imaging
- Video

DESCRIPTION

The **LTC®2979** is a 16-channel Power System Manager used to sequence, trim (servo), margin, supervise, manage faults, provide telemetry and create fault logs. PMBus commands support power supply sequencing, precision point-of-load voltage adjustment and margining. DACs use a proprietary soft-connect algorithm to minimize supply disturbances. Supervisory functions include overvoltage and undervoltage threshold limits for sixteen power supply output channels and two power supply input channels, as well as over and under temperature limits. Programmable fault responses can disable the power supplies with optional retry after a fault is detected. Faults that disable a power supply can automatically trigger black box EEPROM storage of fault status and associated telemetry. An internal 16-bit ADC monitors sixteen output voltages, two input voltages and die temperature. In addition, odd numbered channels can be configured to measure the voltage across a current sense resistor. A programmable watchdog timer monitors microprocessor activity for a stalled condition and resets the microprocessor if necessary. A single wire bus synchronizes power supplies across multiple ADI Power System Management (PSM) devices. Configuration EEPROM with ECC supports autonomous operation without additional software.

TYPICAL APPLICATION

LTC2979 Sequencing 16 Channels

ABSOLUTE MAXIMUM RATINGS

(Notes 1, 2, 3)

Supply Voltages:

V_{IN_SNS}	-0.3V to 15V
V_{DD33}	-0.3V to 3.6V
V_{DD25}	-0.3V to 2.75V

Digital Input/Output Voltages:

ALERTB, SDA, SCL, CONTROL0, CONTROL1	-0.3V to 5.5V
PWRGD, SHARE_CLK, WDI/RESETB, WP	-0.3V to $V_{DD33} + 0.3V$
FAULTB00, FAULTB01, FAULTB10, FAULTB11	-0.3V to $V_{DD33} + 0.3V$
ASELO, ASEL1	-0.3V to $V_{DD33} + 0.3V$

Analog Voltages:

REFP	-0.3V to 1.35V
REFM	-0.3V to 0.3V
$V_{SENSE[7:0]}$	-0.3V to 6V
$V_{SENSEM[7:0]}$	-0.3V to 6V
$V_{OUT_EN[7:0]}$, V_{IN_EN}	-0.3V to 6V
$V_{DACP[7:0]}$	-0.3V to 6V
$V_{DACM[7:0]}$	-0.3V to 0.3V

Operating Junction Temperature Range:

LTC2979C	0°C to 70°C
LTC2979I	-40°C to 105°C

Storage Temperature Range -55°C to 125°C*

Maximum Junction Temperature 125°C*

Maximum Solder Temperature 260°C

*See OPERATION section of the LTC2977 data sheet for detailed EEPROM derating information for junction temperatures in excess of 105°C.

PIN CONFIGURATION

ORDER INFORMATION

PART NUMBER	PAD OR BALL FINISH	PART MARKING*		PACKAGE TYPE	MSL RATING	OPERATING JUNCTION TEMPERATURE RANGE
		DEVICE	FINISH CODE			
LTC2979CY#PBF	SAC305 (RoHS)	LTC2979Y	e1	BGA	3	0°C to 70°C
LTC2979IY#PBF	SAC305 (RoHS)	LTC2979Y	e1	BGA	3	-40°C to 105°C

• Contact the factory for parts specified with wider operating temperature ranges. *Pad or ball finish code is per IPC/JEDEC J-STD-609.

ELECTRICAL CHARACTERISTICS

The ● denotes the specifications which apply over the full operating temperature range, otherwise specifications are at $T_J = 25^\circ\text{C}$. $V_{DD33} = 3.3\text{V}$, $V_{IN_SNS} = 12\text{V}$, V_{DD25} and REF pins floating, unless otherwise indicated. (Notes 2, 3)

SYMBOL	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
t_{SP}	Pulse Width of Spike Suppressed (Note 13)			98		ns
$t_{TIMEOUT_BUS}$	Time Allowed to Complete any PMBus Command After Which Time SDA Will Be Released and Command Terminated	Mfr_config_all_longer_pmbus_timeout = 0 ● Mfr_config_all_longer_pmbus_timeout = 1 ●		25 200	35 280	ms ms

Additional Digital Timing Characteristics

t_{OFF_MIN}	Minimum Off Time for Any Channel			100		ms
----------------	----------------------------------	--	--	-----	--	----

Note 1: Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating for extended periods may affect device reliability and lifetime.

Note 2: All currents into device pins are positive. All currents out of device pins are negative. All voltages are referenced to GND unless otherwise specified.

Note 3: The LTC2979 electrical characteristics apply to each half of the device, unless otherwise noted. The specifications and functions are the same for both Device A pins and Device B pins.

Note 4: The ADC total unadjusted error includes all error sources. First, a two-point analog trim is performed to achieve a flat reference voltage (V_{REF}) over temperature. This results in minimal temperature coefficient, but the absolute voltage can still vary. To compensate for this, a high-resolution, drift-free, and noiseless digital trim is applied at the output of the ADC, resulting in a very high accuracy measurement.

Note 5: Hysteresis in the output voltage is created by package stress that differs depending on whether the module was previously at a higher or lower temperature. Output voltage is always measured at 25°C , but the module is cycled to 105°C or -40°C before successive measurements. Hysteresis is roughly proportional to the square of the temperature change.

Note 6: The current sense resolution is determined by the L11 format and the mV units of the returned value. For example a full scale value of 170mV returns a L11 value of $0xF2A8 = 680 \cdot 2^{-2} = 170$. This is the lowest range that can represent this value without overflowing the L11 mantissa and the

resolution for 1LSB in this range is $2^{-2} \text{ mV} = 250\mu\text{V}$. Each successively lower range improves resolution by cutting the LSB size in half.

Note 7: The time between successive ADC conversions (latency of the ADC) for any given channel is given as: $36.9\text{ms} + (6.15\text{ms} \cdot \text{number of ADC channels configured in Low Resolution mode}) + (24.6\text{ms} \cdot \text{number of ADC channels configured in High Resolution mode})$.

Note 8: Nonlinearity is defined from the first code that is greater than or equal to the maximum offset specification to full-scale code, 1023.

Note 9: Output enable pins are charge pumped from V_{DD33} .

Note 10: EEPROM endurance and retention are guaranteed by design, characterization and correlation with statistical process controls. The minimum retention specification applies for devices whose EEPROM has been cycled less than the minimum endurance specification.

Note 11: EEPROM endurance and retention will be degraded when $T_J > 105^\circ\text{C}$.

Note 12: The LTC2979 will not acknowledge any PMBus commands while a mass write operation is being executed. This includes the STORE_USER_ALL and MFR_FAULT_LOG_STORE commands or a fault log store initiated by a channel faulting off.

Note 13: Maximum capacitive load, C_B , for SCL and SDA is 400pF. Data and clock rise time (t_r) and fall time (t_f) are:

$$(20 + 0.1 \cdot C_B) \text{ (ns)} < t_r < 300\text{ns} \text{ and } (20 + 0.1 \cdot C_B) \text{ (ns)} < t_f < 300\text{ns}.$$

C_B = capacitance of one bus line in pF. SCL and SDA external pull-up voltage, V_{I0} , is $3.13\text{V} < V_{I0} < 5.5\text{V}$.

V _{IN_EN}	K1	K7	Out	DC/DC Converter V _{IN} ENABLE Pin. Open-Drain Pull-Down Output
V _{IN_SNS}	G1	G7	In	V _{IN} SENSE Input. This Voltage is Compared Against the V _{IN} On and Off Voltage Thresholds in Order to Determine When to Enable and Disable, Respectively, the Downstream DC/DC Converters
V _{DD33}	G2	G8	In	3.13V to 3.47V Supply Input Pin. Short Pin G2 to H2 and J2 and Pin G8 to H8 and J8.
V _{DD33}	H2	H8	In	3.13V to 3.47V Supply Input Pin. Short Pin H2 to G2 and J2 and Pin H8 to G8 and J8.
V _{DD33}	J2	J8	In	Input for Internal 2.5V Sub-Regulator. Short Pin J2 to G2 and H2 and Pin J8 to G8 and H8.
V _{DD25}	K2	K8	In/Out	2.5V Internally Regulated Voltage Output. Do not connect to V _{DD25} pins of any other devices
WP	M2	M8	In	Digital Input. Write-Protect Input Pin, Active High
PWRGD	L2	L8	Out	Power Good Open-Drain Output. Indicates When Outputs are Power Good. Can be Used as System Power-On Reset. The Latency of This Signal May Be as Long as the ADC Latency. See Note 7
SHARE_CLK	K3	K9	In/Out	Bidirectional Clock Sharing Pin. Connect a 5.49k Pull-Up Resistor to V _{DD33} . Connect to all other SHARE_CLK pins in the system
WDI/RESETB	L3	L9	In	Watchdog Timer Interrupt and Chip Reset Input. Connect a 10k Pull-Up Resistor to V _{DD33} . Rising Edge Resets Watchdog Counter. Holding This Pin Low for More Than t _{RESETB} Resets the Chip
FAULTB00	M3	M9	In/Out	Open-Drain Output and Digital Input. Active Low Bidirectional Fault Indicator-00. Connect a 10k Pull-Up Resistor to V _{DD33}
FAULTB01	L4	L10	In/Out	Open-Drain Output and Digital Input. Active Low Bidirectional Fault Indicator-01. Connect a 10k Pull-Up Resistor to V _{DD33}
FAULTB10	K4	K10	In/Out	Open-Drain Output and Digital Input. Active Low Bidirectional Fault Indicator-10. Connect a 10k Pull-Up Resistor to V _{DD33}
FAULTB11	M4	M10	In/Out	Open-Drain Output and Digital Input. Active Low Bidirectional Fault Indicator-11. Connect a 10k Pull-Up Resistor to V _{DD33}
SDA	M5	M11	In/Out	PMBus Bidirectional Serial Data Pin

PIN FUNCTIONS

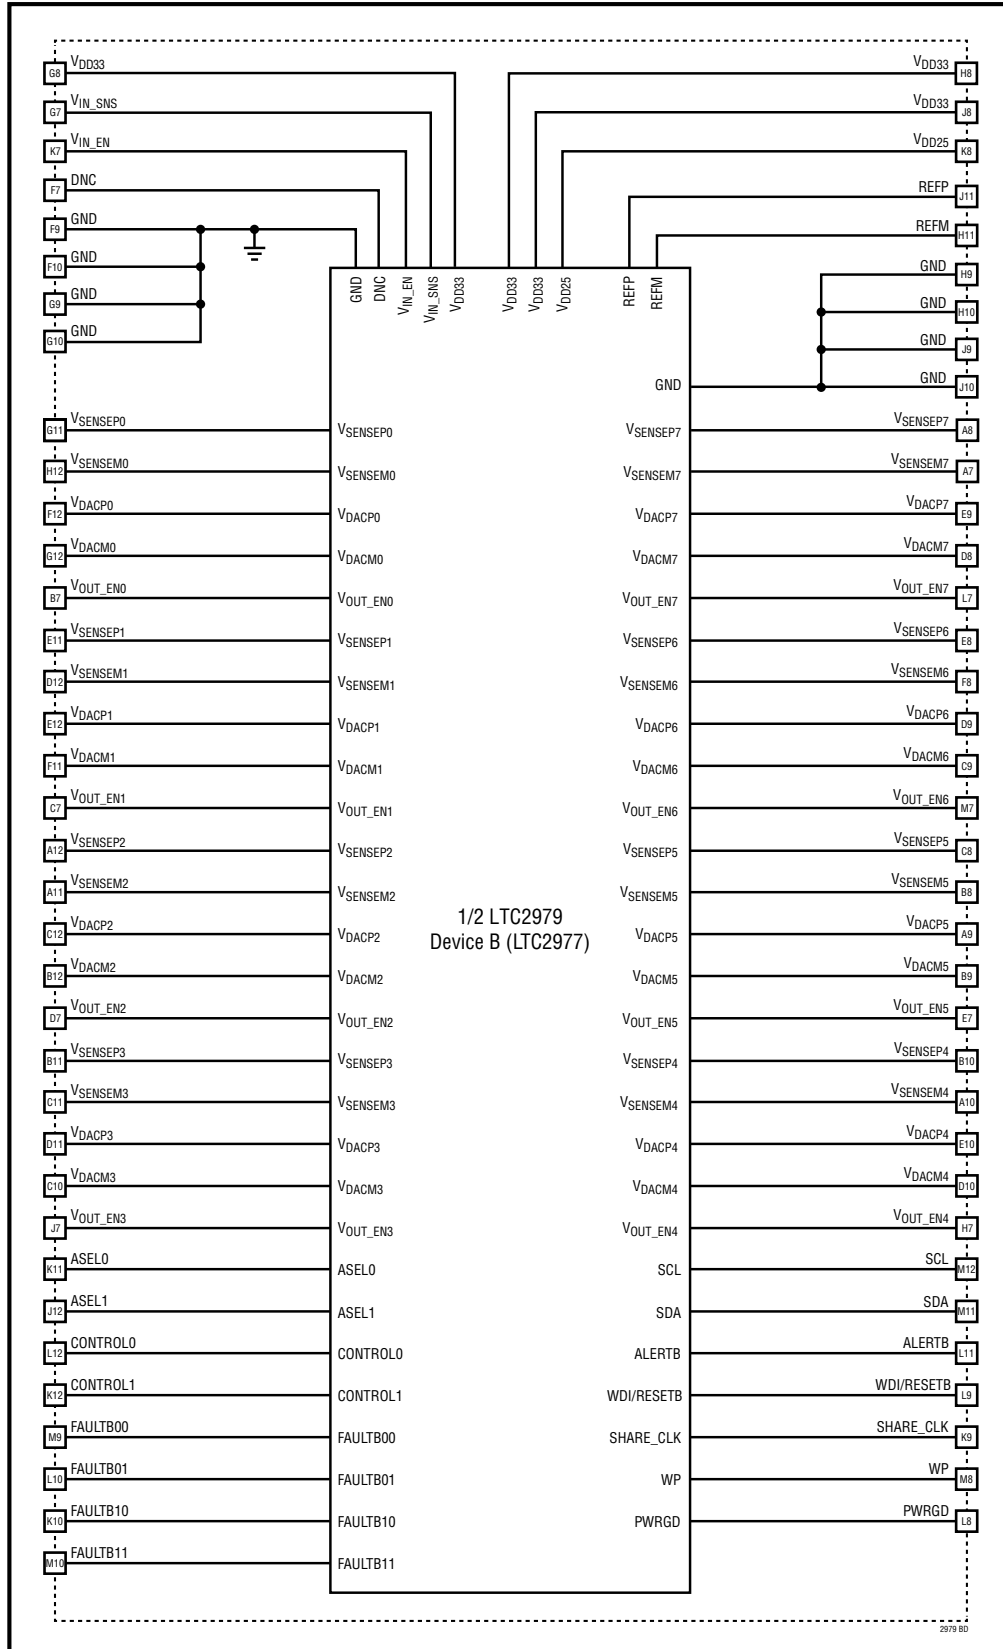

PIN NAME	PIN		PIN TYPE	DESCRIPTION
	Device A	Device B		
SCL	M6	M12	In	PMBus Serial Clock Input Pin (400kHz Maximum)
ALERTB	L5	L11	Out	Open-Drain Output. Generates an Interrupt Request in a Fault/Warning Situation
CONTROL0	L6	L12	In	Control Pin 0 Input
CONTROL1	K6	K12	In	Control Pin 1 Input
ASEL0	K5	K11	In	Ternary Address Select Pin 0 Input. Connect to V_{DD33} , GND or Float to Encode 1 of 3 Logic States
ASEL1	J6	J12	In	Ternary Address Select Pin 1 Input. Connect to V_{DD33} , GND or Float to Encode 1 of 3 Logic States
REFP	J5	J11	Out	Reference Voltage Output
REFM	H5	H11	Out	Reference Return Pin
V_{DACP0}	F6	F12	Out	DAC0 Output
V_{DACM0}	G6	G12	Out	DAC0 Return. Connect to Channel 0 DC/DC Converter's GND Sense or Return to GND
V_{DACP1}	E6	E12	Out	DAC1 Output
V_{DACM1}	F5	F11	Out	DAC1 Return. Connect to Channel 1 DC/DC Converter's GND Sense or Return to GND
V_{DACP2}	C6	C12	Out	DAC2 Output
V_{DACM2}	B6	B12	Out	DAC2 Return. Connect to Channel 2 DC/DC Converter's GND Sense or Return to GND
V_{DACP3}	D5	D11	Out	DAC3 Output
V_{DACM3}	C4	C10	Out	DAC3 Return. Connect to Channel 3 DC/DC Converter's GND Sense or Return to GND
V_{DACP4}	E4	E10	Out	DAC4 Output
V_{DACM4}	D4	D10	Out	DAC4 Return. Connect to Channel 4 DC/DC Converter's GND Sense or Return to GND
V_{DACP5}	A3	A9	Out	DAC5 Output
V_{DACM5}	B3	B9	Out	DAC5 Return. Connect to Channel 5 DC/DC Converter's GND Sense or Return to GND
V_{DACP6}	D3	D9	Out	DAC6 Output
V_{DACM6}	C3	C9	Out	DAC6 Return. Connect to Channel 6 DC/DC Converter's GND Sense or Return to GND
V_{DACP7}	E3	E9	Out	DAC7 Output
V_{DACM7}	D2	D8	Out	DAC7 Return. Connect to Channel 7 DC/DC Converter's GND Sense or Return to GND
GND	F3, F4, G3, G4, H3, H4, J3, J4	F9, F10, G9, G10, H9, H10, J9, J10	Ground	Device A Ground Pins are Isolated from the Device B Ground Pins
DNC	F1	F7	Do Not Connect	Do Not Connect to This Pin

*Any unused $V_{SENSEPN}$ or $V_{SENSEMn}$ or V_{DACMn} pins must be tied to GND.

BLOCK DIAGRAM

BLOCK DIAGRAM

OPERATION

Overview

The LTC2979 contains two independent LTC2977 devices. Each half of the LTC2979 behaves the same as a stand-alone LTC2977, including independent power supply and ground pins, with the following exceptions:

- The V_{PWR} pin has been removed and replaced with an additional V_{DD33} pin.
- The LTC2979 can only be powered from 3.3V.
- The V_{OUT_EN} and V_{IN_EN} pins are limited to 6V.
- The ADC Total Unadjusted Error (TUE_ADC_VOLT_SNS) is 0.5%.

Refer to the LTC2977 data sheet for a detailed description of the device operation, the PMBus command set, and applications information.

Device Address

Since the LTC2979 consists of two independent LTC2977 devices, each half of the LTC2979 must be configured for a unique address. The I²C/SMBus addresses of the LTC2979 are configured in the same manner as for individual LTC2977 devices. The LTC2979 also responds to the LTC2977 global address and the SMBus alert response address, regardless of the state of the ASEL pins and the MFR_I2C_BASE_ADDRESS register. Please refer to the Device Address section in the LTC2977 data sheet for more details.

MFR_SPECIAL_ID

The LTC2979 contains unique MFR_SPECIAL_ID values to differentiate it from the LTC2977. Table 1 lists the MFR_SPECIAL_ID values for the LTC2979.

Table 1. LTC2979 MFR_SPECIAL_ID Values

LTC2979 DEVICE	MFR_SPECIAL_ID
Device A	0x8061
Device B	0x8071

APPLICATIONS INFORMATION

OVERVIEW

The LTC2979 is a digital power system manager that is capable of sequencing, margining, trimming, supervising output voltage for OV/UV conditions, providing fault management, and voltage readback for sixteen DC/DC converters. Input voltage and LTC2979 junction temperature readback are also available. Odd numbered channels can be configured to read back current sense resistor voltages. Multiple LTC2979s can be synchronized to operate in unison using the SHARE_CLK, FAULTB and CONTROL pins. The LTC2979 utilizes a PMBus compliant interface and command set.

POWERING THE LTC2979

The LTC2979 is powered from a 3.13V to 3.47V supply connected to the V_{DD33} pins. Tie all the V_{DD33} pins on each half of the device together. See Figure 2. Separate 3.3V supplies can be used for $V_{DD33(A)}$ and $V_{DD33(B)}$.

Figure 2. Powering LTC2979 from a 3.3V Supply

APPLICATION CIRCUITS

V_{IN} Sense

Voltages other than V_{IN} can be monitored and supervised using the V_{IN_SNS} pins. Each V_{IN_SNS} pin has a calibrated internal divider allowing it to directly sense voltages up to 15V.

Unused ADC Sense Inputs

Connect all unused ADC sense inputs (V_{SENSEn} or $V_{SENSEMn}$) to GND. In a system where the inputs are connected to removable cards and may be left floating in certain situations, connect the inputs to GND using 100k resistors, as shown in Figure 3.

Figure 3. Undedicated Pull-Up Resistors

PCB ASSEMBLY AND LAYOUT SUGGESTIONS

Bypass Capacitor Placement

The LTC2979 requires 0.1 μ F bypass capacitors between the V_{DD33} pins and GND, the V_{DD25} pins and GND, and between the REFP and REFM pins. In order to be effective, these capacitors should be made of high quality ceramic dielectric such as X5R or X7R and be placed as close to the chip as possible. The PCB layout should adhere to good layout guidelines. A multilayer PCB that dedicates a layer to power and ground is recommended. Low resistance and low inductance power and ground connections are important to minimize power supply noise and ensure proper device operation.

DESIGN CHECKLIST

I²C

- Each half of the LTC2979 must be configured for a unique address. Unique hardware ASEL $_n$ values are recommended for simplest in-system programming.
- The address select pins (ASEL $_n$) are tri-level; Check Table 1 of the LTC2977 data sheet.
- Check addresses for collision with other devices on the bus and any global addresses.

APPLICATIONS INFORMATION

Output Enables

- Use appropriate pull-up resistors on all V_{OUT_ENn} pins.
- Verify that the absolute maximum ratings of the V_{OUT_ENn} pins are not exceeded.

V_{IN} Sense

- No external resistive divider is required to sense V_{IN} over the range of 0V to 15V; V_{IN_SNS} already has an internal calibrated divider.

Logic Signals

- Verify the absolute maximum ratings of the digital pins (SCL, SDA, ALERTB, FAULTB zn , CONTROL n , SHARE_CLK, WDI/RESETB, ASELn, PWRGD) are not exceeded.
- Connect all SHARE_CLK pins in the system together and pull up to 3.3V with a 5.49k resistor.
- Do not leave CONTROL n pins floating. Pull up to 3.3V with a 10k resistor.
- Tie WDI/RESETB to V_{DD33} with a 10k resistor. Do not connect a capacitor to the WDI/RESETB pin.
- Tie WP to either V_{DD33} or GND. Do not leave floating.

Unused Inputs

- Connect all unused V_{SENSEp_n} , V_{SENSEm_n} and DACM n pins to GND. Do not float unused inputs. Refer to Unused ADC Sense Inputs in the Applications Information section of the LTC2977 data sheet.

DAC Outputs

- Select appropriate resistor for desired margin range. Refer to the resistor selection tool in LTpowerPlay for assistance.

For a more complete list of design considerations and a schematic checklist, see the Design Checklist on the [LTC2979](#) product page.

PACKAGE DESCRIPTION

BGA Package
144-Lead (12mm × 12mm × 1.29mm)
 (Reference LTC DWG # 05-08-1967 Rev B)
 (Y144AH)

- NOTES:**
1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M-1994
 2. ALL DIMENSIONS ARE IN MILLIMETERS. DRAWING NOT TO SCALE
 3. BALL DESIGNATION PER JEDEC MS-028 AND JEP95
 4. DETAILS OF PIN #1 IDENTIFIER ARE OPTIONAL, BUT MUST BE LOCATED WITHIN THE ZONE INDICATED. THE PIN #1 IDENTIFIER MAY BE EITHER A MOLD OR MARKED FEATURE
 5. PRIMARY DATUM -Z- IS SEATING PLANE
 6. SOLDER BALL COMPOSITION CAN BE 96.5% Sn/3.0% Ag/0.5% Cu OR Sn Pb EUTECTIC
 7. PACKAGE ROW AND COLUMN LABELING MAY VARY AMONG μModule PRODUCTS. REVIEW EACH PACKAGE LAYOUT CAREFULLY

REVISION HISTORY

REV	DATE	DESCRIPTION	PAGE NUMBER
A	07/22	Update VDAC Full-Scale MIN Specification.	4
		Remove Temp Dot for DAC INL Specification.	4
		I _{VOUT_ENn} Output Sinking Current at condition Weak Pull-Down Enabled: minimum spec changed from 33 μ A to 28 μ A and typical spec changed from 50 μ A to 43 μ A.	5
		I _{VOUT_ENn} Output Sinking Current at condition Strong Pulldown Enabled, V _{OUT_ENn} = 0.1V: spec updated to typical value only at room temp.
