1. Introduction

The Taoglas Genesis MA.240 is high performance 3-in1 GNSS and 4G MIMO, low profile, adhesive mount antenna. It is an omni-directional and fully IP65 waterproof for use in external M2M applications in telematics, transportation and remote monitoring applications worldwide. It is designed to be mounted directly on glass or plastic in the interior of vehicles.

Typical applications include:

- HD Video over LTE
- First Responder and Emergency Services
- Automotive Vehicle Tracking and Telematics

The unique MA240 antenna delivers powerful dual antenna technology for worldwide 4G bands at 700MHz / 800MHz / 1700MHz / 1800MHz / 2600MHz, plus GPS/GLONASS/GALILEO for next generation location accuracy. 4G wireless applications demand high speed data uplink and downlink. High efficiency and high gain antennas are necessary to achieve the required signal to noise ratio and throughput required to solve these challenges.

Taoglas also takes care to have high isolation between the two 4G antennas to prevent self-interference. Low loss cables are used to keep efficiency high over long cable lengths. In contrast, smaller LTE antennas with poorer quality thinner cables will have much reduced efficiency and isolation, which would lead to a large drop in system throughput or drops, and may indeed not make a system connection at all. The GPS/GLONASS/GALILEO antenna has been carefully designed to work equally well on both GPS and GLONASS bands, leading to higher location accuracy and stability of tracking in urban environments.

Finally, if your device requires USA LTE certification with an external antenna then the MA240 is the ideal solution to pass approvals. Cable length and connector types are customizable. Contact your regional Taoglas sales office for support.
