Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 1A devices.

Absolute Maximum Ratings^{7,8}

Parameter	Absolute Maximum
Input Power	20 dBm
Drain Voltage	+6.5 V
Gate Voltage	-3 to 0 V
Junction Temperature ⁹	+175°C
Storage Temperature	-65°C to +125°C

7. Exceeding any one or combination of these limits may cause permanent damage to this device.

8. MACOM does not recommend sustained operation near these survivability limits.

9. Junction temperature directly effects device MTTF. Junction temperature should be kept as low as possible to maximize lifetime.

Recommended PCB Layout Detail:

RF input and output pre-matching circuit patterns are designed to compensate packaging effects. Transmission line dimensions apply to a PCB with 0.203 mm thick Rogers RO4003C laminate dielectric. Performance curves shown in this data sheet were measured with these circuit patterns.

Biasing Conditions

Recommended biasing conditions are $V_D = 6 V$, $I_{DQ} = 900 \text{ mA}$ (controlled with V_G). The drain bias voltage range is 3 to 6 V, and the quiescent drain current biasing range is 600 to 1200 mA.

 V_G pins 10 and 11 are connected internally; choose either pin for layout convenience. Muting can be accomplished by setting the V_G to the pinched off voltage (V_G = -2 V).

 V_D bias must be applied to $V_D1,\,V_D2,\,V_D3$, and V_D4 pins. V_D3 pins 27 and 28 are connected internally: choose either pin for layout convenience. Two V_D4 pins 15 and 26 (not connected internally) are required for current symmetry.

Operating the MAAP-011246

Turn-on

- 1. Apply V_G (-1.5 V).
- 2. Apply V_D (6.0 V typical).
- 3. Set I_{DQ} by adjusting V_G more positive
 - (typically -0.9 to -1.0 V for I_{DQ} = 900 mA).
- 4. Apply RF_{IN} signal.

Turn-off

- 1. Remove RF_{IN} signal.
- 2. Decrease V_G to -1.5 V.
- 3. Decrease V_D to 0 V.
