5. Exceeding any one or combination of these limits may cause permanent damage to this device.

6. MACOM does not recommend sustained operation near these survivability limits.

 Junction temperature directly effects device MTTF. Junction temperature should be kept as low as possible to maximize lifetime.

#### Handling Procedures

Please observe the following precautions to avoid damage:

#### **Static Sensitivity**

#### **Bias Sequence**

All gate voltages must be applied prior to applying drain voltages.

- 1. Apply  $V_{GG}$  (about -1.5 V) to pin 23.
- 2. Apply  $V_{DD}$  (+5.5 V) to pin 20.
- 3. Adjust  $V_{GG}$  to set  $I_{DQ}$  to 450 mA.

Shut down by setting  $V_{DD} = 0 V$  first.

### **Recommended PCB Information**

RF input and output are 50  $\Omega$  transmission lines on single layer 7.3 mil Rogers RO4350B LoPro with 1.5 oz. Cu. For best thermal management, use as many copper filled vias under the device as physically possible. The filled vias should be plated over. 8 mil diameter vias in a 5 x 5 array are used on this sample board.
