## Temperature Compensated Directional Power Detector 6 - 18 GHz

### Features

- Integrated Directional Coupler
- Low Insertion Loss: 0.27 dB @ 12 GHz
- Minimum Detectable Power: -16 dBm @ 12 GHz
- Built-In Temperature Compensation
- Lead-Free 1.5 x 1.2 mm 6-Lead TDFN Plastic Package
- Halogen-Free "Green" Mold Compound
- RoHS\* Compliant and 260°C Reflow Compatible

### Description

The MACP-010572 belongs to a series of small, easy-to-use, broadband, directional detectors. With integrated low loss directional couplers and built-in temperature compensation circuits, these detectors provide an easy way to monitor the power of a signal travelling in a specific direction along a transmission line. Detectors are housed in a miniature, surface mount, lead less plastic package. They require a small amount of bias for proper performance. The total bias current is less than 0.5 mA.

Typical applications include power monitoring and leveling in Point-to-Point radios, IMS, Radar, VSAT, EW, and Aerospace & Defense systems.

The surface mount package is small yet can be handled and placed with standard pick and place assembly equipment. Detectors are fabricated on a well established GaAs process featuring full passivation for performance and reliability.

# Ordering Information<sup>1,2</sup>

| Part #             | Package        |
|--------------------|----------------|
| MACP-010572-TR1000 | 1000 part reel |
| MACP-010572-001SMB | Sample Board   |

1. Reference Application Note M513 for reel size information.

2. All sample boards include 5 loose parts.

### **Functional Schematic**

## **Pin Configuration<sup>3</sup>**

| Pin # | Pin Name                       | Description                |  |  |
|-------|--------------------------------|----------------------------|--|--|
| 1     | RF <sub>OUT</sub>              | RF Output                  |  |  |
| 2     | N/C No Connection              |                            |  |  |
| 3     | RF <sub>IN</sub> RF Input      |                            |  |  |
| 4     | V <sub>BIAS</sub> Bias Voltage |                            |  |  |
| 5     | N/C                            | No Connection <sup>3</sup> |  |  |
| 6     | V <sub>DET</sub>               | Detector Voltage           |  |  |
| 7     | GND Ground                     |                            |  |  |

3. Pins 2 and 5 are not connected internally and should not be used for grounding. Package has exposed bottom metal paddle (Pin 7) which should be connected to the circuit ground. The parasitic inductance introduced by this connection should be as small as possible.

# Absolute Maximum Ratings<sup>4,5</sup>

| Parameter             | Absolute Maximum |  |  |
|-----------------------|------------------|--|--|
| Input Power           | +40 dBm          |  |  |
| Operating Voltage     | 8 V              |  |  |
| Operating Temperature | -40°C to +85°C   |  |  |
| Storage Temperature   | -65°C to +150°C  |  |  |

4. Exceeding any one or combination of these limits may cause permanent damage to this device.

5. MACOM does not recommend sustained operation near these survivability limits.

### **Handling Procedures**

Please observe the following precautions to avoid damage:

### **Static Sensitivity**

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 0A devices.

### Temperature Compensated Directional Power Detector 6 - 18 GHz

#### **Application Information**

The MACP-010572 is designed to deliver high performance and to be easy to use.

No external components are needed. The RF connections required by the MACP-010572 are shown in a schematic below.

Pin 3 should be connected to the RF line bringing the input signal. Pin 1 is the RF output. The third required connection is that to the RF ground. The exposed metal paddle on the back of the package must be connected to the RF ground of the board housing the detector. This can be accomplished by using conductive via holes. It is important to ensure that the parasitic inductance associated with the connection between the detector and the RF ground is as small as possible. The RF ground also provides the return path for the DC bias current.

#### **DC Bias**

The MACP-010572 operates with a positive 3.2 V bias applied to pin 4. The output voltage is available on pin 6.

#### **Recommended PCB Configuration**

#### **Evaluation Board**

MACOM will supply an evaluation board and loose samples upon qualified request. The kit consists of a PCB and SMA connectors. MACOM suggests a Rogers 4350 dielectric of 0.008" (0.20 mm) with ½ ounce copper. Proper grounding is always important, we suggest 8 mil (0.20 mm) vias placed generously underneath the part.
