### Description

MADT-011000 is a single-ended, internally-matched power detector with wide input bandwidth and high dynamic range. The circuit consumes 70  $\mu$ A from a 4.5 V supply, while matched detector and reference diodes provide temperature compensation in differential operation.

The power detector is housed in a 3 mm 16-lead QFN package and is ESD protected for reliability and ease of handling.

MADT-011000 is well suited for power control in microwave radios, test and measurement equipment, and radar applications.

MADT-011000 is also available in bare die format. Refer to datasheet MADT-011000-DIE.
