

SP5T High Isolation Terminated Switch 0.01 - 4.0 GHz

Rev. V1

Features

- Isolation: 51 dB @ 2.1 GHz
- Insertion Loss: 1.0 dB @ 2.1 GHz
- Input IP3: 50 dBm Typical @ 2.1 GHz
- Integral CMOS 3:5 Decoder, Only 3 Control Pins
- Low Gate Lag for timing sensitive applications
- 6 States: 5 ON paths and All-Off State
- 50 Ω Terminated Outputs (Off-State)
- Lead-Free 4 mm 24-Lead PQFN package
- RoHS* Compliant and 260°C Reflow Compatible

Description

The MASW-010351 is an industry leading high isolation single pole five throw (SP5T) switch. This device design is optimized to take advantage of separate GaAs pHEMT switch die and CMOS driver die. The switch circuit design is symmetric and combined with the separate CMOS decoder allows it to maintain an excellent combination of insertion loss and isolation for all states. This makes the device ideal for band switching in multi-channel and multi-mode base-station applications as well as other applications where a compact, high isolation, SP4T switch is required.

The MASW-010351 switch die is fabricated using a mature 0.5 micron gate length GaAs pHEMT process and features full passivation for enhanced performance and reliability.

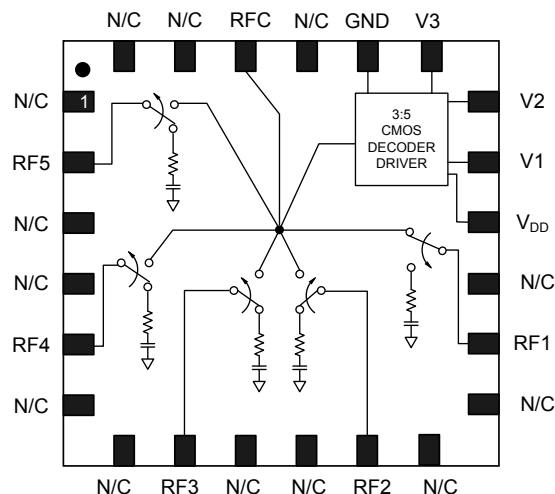

The MASW-010351 is offered in an industry standard lead-free 4mm 24-Lead PQFN RoHS compliant plastic package, which is ideal for high volume surface mount reflow assembly.

Ordering Information ^{1,2}

Part Number	Package
MASW-010351-TR3000	3000 piece reel
MASW-010351-001SMB	Sample Test Board

1. Reference Application Note M513 for reel size information.
2. All sample boards include 5 loose parts.

5. External DC blocking capacitors are required on all RF ports. Typical performance specifications are with 1000 pF blocking and decoupling capacitors, as shown on the application schematic.

Absolute Maximum Ratings ^{6,7}

Parameter	Absolute Maximum
Input Power (RFC Port, ON state)	+20 dBm (0.05 - 0.5 GHz) +30 dBm (0.5 - 4.0 GHz)
V_{DD} Supply	-0.5 V to +7.0 V
Control Voltage	-0.5 V < V_C < $V_{DD} + 0.5$ V (V_C not to exceed 7.0 V)
Operating Temperature	-40°C to +85°C
Storage Temperature	-65°C to +150°C

6. Exceeding any one or combination of these limits may cause permanent damage to this device.
7. M/A-COM Technology Solutions does not recommend sustained operation near these survivability limits.

Application Schematic^{9,10,11}

9. The exposed pad centered on the package bottom must be connected to ground for RF, DC and thermal considerations.
10. All blocking capacitors and decoupling capacitors = 1000 pF
11. M/A-COM Technology Solutions recommends connecting all N/C pins to RF and DC ground in the PCB layout as shown.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices. An external protection circuit using ESD/Transient protection devices on the RF ports can be used to protect the IC if required in application.
