Description

The MASW-011041 is a high power PIN diode SP3T switch in a common anode configuration, operating from 50 MHz to 1 GHz. It features low insertion loss and excellent linearity. It includes two high-power ports capable of handling up to 200 Watts CW and one low-power port capable of handling up to 100 Watts CW of incident power at a base plate temperature of +85°C.

This high power switch is ideal for use on land mobile radio and MIL-COM applications that require higher CW and pulsed power operation. This device can operate with positive-only DC supplies, making it suitable for switch-filter and power amplifier control circuits.

The MASW-011041 is manufactured using MACOM’s hybrid manufacturing process featuring high voltage PIN diodes and passive devices integrated in a 9 mm HQFN 20-lead plastic package.

The MASW-011041 is compatible with MACOM’s MADR-010574 PIN Diode Driver.
