

General Description

The MAX20010 evaluation kit (EV kit) demonstrates the MAX20010 automotive single 6A step-down converter. The EV kit operates over an input range of 3V to 5.5V, with the output set for 1V and up to 6A load.

Features

- Differential Remote-Voltage Sensing
- 3V to 5.5V Input Supply Range
- I²C-Controlled 0.5V to 1.5875V Output Voltage Range
- 2.2MHz Operation
- ±2% Output-Voltage Accuracy
- Power-Good Output
- Current-Mode, Forced-PWM, and Skip Operation
- Proven PCB Layout
- Fully Assembled and Tested

Quick Start

Recommended Equipment

- MAX20010 EV kit
- 6V, 3A DC power supply
- Electronic load capable of 6A
- Digital voltmeter (DVM)

[Ordering Information](#) appears at end of data sheet.

Procedure

The EV kit is fully assembled and tested. Follow the steps below to verify board operation. **Caution: Do not turn on supplies until all connections are completed.**

- 1) Set the power supply to 5V. Disable the power supply.
- 2) Verify that jumper JU2 has a shunt across pins 1-2 and jumpers JU1 and JU3 are open.
- 3) Connect the power supply between the PVDD and nearest PGND test points.
- 4) Connect the electronic load between the SDO and nearest PGND test points.
- 5) Connect the DVM between the SDO and nearest PGND test points.
- 6) Turn on the power supply.
- 7) Enable the electronic load.
- 8) Verify that the voltage at the SDO output pad is approximately 1V. Disable the power supply.

Detailed Description of Hardware

Enable (EN)

Place a shunt across pins 1-2 on jumper JU2 for normal operation. To place the device into shutdown mode, place the shunt across pins 2-3 on JU2. See [Table 1](#) for jumper settings.

Table 1. EN Configuration (JU1)

SHUNT POSITION	DESCRIPTION
Pins 1-2*	Connects the EN pin to the voltage at PVDD for normal operation
Pins 2-3	Connects the EN pin to ground to enter shutdown mode

*Default position.

Synchronization Input/Output (SYNC)

The EV kit features a SYNC connection that allows for synchronization input or output. The function is set by the SO[1:0] bit, as defined in the MAX20010C/MAX20010D IC data sheet. Jumper JU3 connects a pullup resistor to PVDD. See [Table 2](#) for bit description.

I²C Slave Address (ADDR)

The EV kit provides jumper JU1 to set the ADDR register. Pulldown resistor R4 is used to set ADDR = 0. If ADDR = 1 is desired, then set a shunt across pins 1-2 on jumper JU1. Refer to Table 1 in the MAX20010C/MAX20010D IC data sheet for more details on I²C slave address.

Power-Good Output (PGOOD)

The EV kit provides a PGOOD test point to monitor the status of the device output. PGOOD asserts low when V_{SDO} exceeds the PG_OV and PG_UV thresholds. PG_is deasserted after a UV/OV propagation delay if the output voltage is outside the PG_UV/OV thresholds.

Component List

DESIGNATION	QTY	DESCRIPTION
C1–C3	3	47µF ±10%, 6.3V X7R ceramic capacitors (1210) Murata GCM32ER70J476K
C4	0	Not installed, ceramic capacitors
C5	1	10µF ±10%, 16V X7R ceramic capacitor (1206) TDK C3216X7R1C106K
C6	1	4.7µF ±10%, 16V X7R ceramic capacitor (0805) Murata GCM21BR71C475K
C7	1	68µF ±20%, 10V, aluminum electrolytic capacitor Murata ECASD61A686M015K00
C8	1	1µF ±10%, 50V X7R ceramic capacitor (0805) TDK C2012X7R1H105K
J1	1	20-pin (2 x 10) right-angle receptacle, 0.1in
JU1, JU2	2	3-pin headers, 2.54mm
JU3	1	2-pin header, 2.54mm

Table 2. SYNC Settings

BIT	BIT DESCRIPTION
SO[1:0]	SYNC I/O Select 00 – Master: Input, rising edge starts cycle 01 – Master: Input, falling edge starts cycle 10 – Master: Output, falling edge starts cycle 11 – Unused

Output Voltage

Output voltage is adjustable by changing the VID registers. Refer to Table 9 in the MAX20010C/MAX20010D IC data sheet. When increasing the output voltage, be aware of the preset maximum allowed voltage. The maximum can be adjusted with the VIDMAX register. Refer to Table 4 in the MAX20010C/MAX20010D IC data sheet.

PCB Layout Recommendations

Careful PCB layout is critical to performance. Place the input capacitor (C5) next to the IC (see [Figure 2](#)). Route the sensing signals (RS_) away from the high-speed switching nodes.

DESIGNATION	QTY	DESCRIPTION
L1	1	0.22µH inductor Coilcraft XAL4020-221ME
R1	1	0Ω ±1% resistor (0402)
R2	1	100Ω ±1% resistor (0402)
R3, R6–R9	5	1kΩ ±1% resistors (0402)
R4	1	100kΩ ±1% resistor (0402)
R5	1	10kΩ ±5% resistor (0402)
R10	1	100Ω ±5% resistor (0402)
U1	1	Automotive step-down converter (20 TQFN-EP*) Maxim MAX20010DATPN/V+
