

Precision, Dual, High-Speed Analog Switches

General Description

The MAX301/MAX303/MAX305 are precision, dual, high-speed analog switches. The single-pole single-throw (SPST) MAX301 and double-pole single-throw (DPST) MAX305 dualswitches are normally open (NO). The single-pole double-throw (SPDT) MAX303 has two NO and two normally closed (NC) poles. All three parts offer low on resistance (less than 35Ω), guaranteed to match to within 2Ω between channels and to remain flat over the full analog signal range ($\Delta 3\text{max}$). They also offer low leakage (less than 250pA at $+25^\circ\text{C}$ and less than 6nA at $+85^\circ\text{C}$) and fast switching (turn-on time less than 150ns and turn-off time less than 100ns).

The MAX301/MAX303/MAX305 are fabricated with Maxim's new improved silicon-gate process for high system accuracy. Design improvements guarantee extremely low charge injection (15pC) and low power consumption ($35\mu\text{W}$). A 44V maximum breakdown voltage allows rail-to-rail analog signal capability.

These monolithic switches operate with a single positive supply ($+10\text{V}$ to $+30\text{V}$) or with split supplies ($\pm 4.5\text{V}$ to $\pm 20\text{V}$) while retaining CMOS-logic input compatibility and fast switching. CMOS inputs provide reduced input loading.

Applications

Sample-and-Hold Circuits	Military Radios
Test Equipment	Communication Systems
Heads-Up Displays	Battery-Operated Systems
Guidance and Control Systems	PBX, PABX

Features

- ◆ Low On-Resistance $< 22\Omega$ Typical (35Ω Max)
- ◆ Guaranteed Matched On-Resistance Between Channels $< 2\Omega$
- ◆ Guaranteed Flat On-Resistance over Full Analog Signal Range $\Delta 3\Omega$ Max
- ◆ Guaranteed Charge Injection $< 15\text{pC}$
- ◆ Guaranteed Off-Channel Leakage $< 6\text{nA}$ at $+85^\circ\text{C}$
- ◆ Single-Supply Operation ($+10\text{V}$ to $+30\text{V}$)
Bipolar-Supply Operation ($\pm 4.5\text{V}$ to $\pm 20\text{V}$)
- ◆ TTL-/CMOS-Logic Compatible
- ◆ Rail-to-Rail Analog Signal Handling Capability

MAX301/MAX303/MAX305

Precision, Dual, High-Speed Analog Switches

ABSOLUTE MAXIMUM RATINGS

Voltage Referenced to V-

V+	44V
GND	25V
V _L	(GND-0.3V) to (V+) +0.3V
NO ₋ , NC ₋ , IN ₋ , COM ₋	(V- - 2V) to (V+ + 2V) or 30mA,whichever occurs first
Continuous Current, COM ₋ , NO ₋ , NC ₋	30mA
Peak Current, COM ₋ , NO ₋ , NC ₋ (pulsed at 1ms, 10% duty cycle max)	100mA

Continuous Power Dissipation (T_A = +70°C) (Note 2)

16-Pin Plastic DIP (derate 10.53mW/°C above +70°C)	842mW
16-Pin Narrow SO (derate 8.70mW/°C above +70°C)	696mW
16-Pin CERDIP (derate 10.00mW/°C above +70°C)	800mW
20-Pin LCC (derate 9.09mW/°C above +70°C)	727mW

Operating Temperature Ranges:

MAX30_C_	0°C to +70°C
MAX30_E_	-40°C to +85°C
MAX30_M_	-55°C to +125°C

Storage Temperature Range

Lead Temperature (soldering, 10s)	+300°C
---	--------

Note 1: Signals on NO₋, NC₋, or COM₋ beyond V+ or V- are clamped by internal diodes. Limit forward current to maximum current rating. Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

(V+ = 15V, V- = -15V, V_L = +5V, GND = 0V, V_{INH} = +2.4V, V_{INL} = +0.8V, T_A = T_{MIN} to T_{MAX}, unless otherwise noted.)

Applications Information

Operation with Supply Voltages Other than ±15V

The MAX301/MAX303/MAX305 switches operate with ±4.5V to ±20V bipolar supplies and a +10V to +30V single supply. In either case, analog signals ranging from V+ to V- can be switched. The *Typical Operating Characteristics* graphs show the typical on-resistance variation with analog signal and supply voltage. The usual on-resistance temperature coefficient is 0.5%/°C (typ).

Logic Inputs

The MAX301/MAX303/MAX305 operate with a single positive supply or with bipolar supplies. The devices maintain TTL compatibility with supplies anywhere in the ±4.5V to ±20V range as long as V_L = +5V. If V_L is connected to V+ or another supply at voltages other than +5V, the devices will operate at CMOS-logic level inputs.

Overvoltage Protection

Proper power-supply sequencing is recommended for all CMOS devices. It is important not to exceed the absolute maximum ratings because stresses beyond the listed ratings may cause permanent damage to the devices. Always sequence V+ on first, followed by V_L, V-, and logic inputs. If power-supply sequencing is not possible, add two small signal diodes in series with the supply pins for overvoltage protection (Figure 1). Adding diodes reduces the analog signal range to 1V below V+ and 1V below V-, but low switch resistance and low leakage characteristics are unaffected. Device operation is unchanged, and the difference between V+ to V- should not exceed +44V.
