3V/5V, 4Ω, Wideband Quad 2:1 Analog Multiplexer

General Description

The MAX4674 is a low-voltage CMOS analog switch containing four 2:1 multiplexers/demultiplexer. When powered from a single +5V supply, it features a low 4Ω max on-resistance (R_{ON}), 0.4Ω max R_{ON} matching between channels, and 0.8Ω RON flatness over the entire signal range. Off-leakage current is only 0.5nA max at +25°C.

The MAX4674 features fast turn-on (t_{ON}) and turn-off (t_{OFF}) times of 18ns and 6ns, respectively, and is available in QFN, QSOP, TSSOP, and SO packages.

This low-voltage multiplexer operates with a +1.8V to +5.5V single supply. All digital inputs have +0.8V and +2.4V logic thresholds, ensuring TTL/CMOS-logic compatibility with +5V operation.

Applications

10/100 Base-T

ATM Switching

Audio and Video Signal Routing

Low-Voltage Data-Acquisition Systems

Communications Circuits

Relay Replacement

Features

- **Guaranteed On-Resistance**
  4Ω max (+5V Supply)
  6Ω max (+3V Supply)
- **Guaranteed Match Between Channels**
  0.4Ω max
- **Guaranteed Flatness Over Signal Range**
  0.8Ω max
- **1.8V Operation**
  R_{ON} = 100Ω typ Over Temperature
  t_{ON} = 51ns typ
  t_{OFF} = 13ns typ
- **Guaranteed Low Leakage Currents**
  0.5nA max at +25°C
- **Single-Supply Operation from +1.8V to +5.5V**
- **Rail-to-Rail Signal Handling**
- **TTL/CMOS-Logic Compatible**
- **Crosstalk: -114dB (1MHz)**
- **Off-Isolation: -67dB (1MHz)**
- **4mm × 4mm QFN Package**

Note 1: Signals on NO_, NC_, and COM_ exceeding V+ or GND are clamped by internal diodes. Limit forward-diode current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Note 2: The algebraic convention, where the most negative value is a minimum and the most positive value a maximum, is used in this data sheet.

Note 3: Parts are tested at the maximum hot-rated temperature. Limits across the entire temperature range are guaranteed by design and correlation.

Note 4: $\Delta R_{ON} = R_{ON(MAX)} - R_{ON(MIN)}$.

Note 5: ΔR_{ON} matching specifications for QFN packaged parts are guaranteed by design.

Note 6: Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal range.

Note 7: Guaranteed by design.

Note 8: Off-Isolation = $20\log_{10}(V_{COM}/V_{NO})$, V_{COM} = output, V_{NO} = input to off switch.

Note 9: Between any two switches.

Detailed Description

The MAX4674 is a low on-resistance (R_{ON}), low-voltage, quad 2:1 analog multiplexer/demultiplexer that operates from a +1.8V to +5.5V single supply. The MAX4674 features very fast switching speed (t_{ON} = 18ns max, t_{OFF} = 6ns max) and guaranteed break-before-make switching. Its low R_{ON} allows high continuous currents to be switched in a variety of applications.

Digital Interface

A0 and $\overline{EN}$ are CMOS digital inputs that meet TTL logic levels when V+ = 5V. Note that A0 and $\overline{EN}$ can exceed the voltage at V+ to a maximum of +5.5V. This feature allows operation of the MAX4674 from a +3.3V supply while controlling it with 5V CMOS logic signals.

The *Pin Configuration/Functional Diagram/Truth Table* located on the first page of this data sheet details the operation of the MAX4674.

Applications Information

Power-Supply Considerations

Overview

The MAX4674 construction is typical of most CMOS analog switches. It has two supply pins, V+ and GND, used to drive the internal CMOS switches and set the limits of the analog voltage on any switches. Reverse ESD-protection diodes are internally connected between each analog-signal pin and both V+ and GND. If any analog signal exceeds V+ and GND, one of these diodes conducts. During normal operation, these and other reverse-biased ESD diodes leak, forming the only current drawn from V_{CC} or GND.

Virtually all the analog leakage current comes from the ESD diodes. Although the ESD diodes on a given signal pin are identical and therefore fairly well balanced, they are reverse biased differently. Each is biased by either V+ or GND and the analog signal. This means

their leakages will vary as the signal varies. The difference in the two-diode leakages to the V+ and GND pins constitutes the analog-signal-path leakage current. All analog leakage current flows between each pin and one of the supply terminals, not to the other switch terminal, which is why both sides of a given switch can show leakage currents of either the same or opposite polarity.

V+ and GND power the internal logic and set the input logic limits. Logic inputs have ESD-protection diodes to ground.

The logic-level thresholds are TTL/CMOS compatible when V+ is +5V. As V+ rises, the threshold increases; as V+ falls, the threshold decreases. For example, when V+ = +3V, the guaranteed minimum logic-high threshold decreases to 2.0V.

Low-Voltage Operation

The MAX4674 operates from a single supply between +1.8V and +5.5V. At room temperature, it actually "works" with a single supply near or below +1.7V; as supply voltage decreases, however, switch on-resistance becomes very high.

Overvoltage Protection

Proper power-supply sequencing is recommended for all CMOS devices. Do not exceed the absolute maximum ratings because stresses beyond the listed ratings can cause permanent damage to the device. Always sequence V+ on first, followed by the logic inputs and analog signals. If power-supply sequencing is not possible, add two small signal diodes (D1, D2) in series with the supply pins for overvoltage protection (Figure 1).

Adding diodes reduces the analog-signal range to one diode drop below V+ and one diode drop above GND, but does not affect the device's low switch resistance and low leakage characteristics. Device operation is unchanged, and the difference between V+ and GND should not exceed 6V. These protection diodes are not recommended if signal levels must extend to ground.

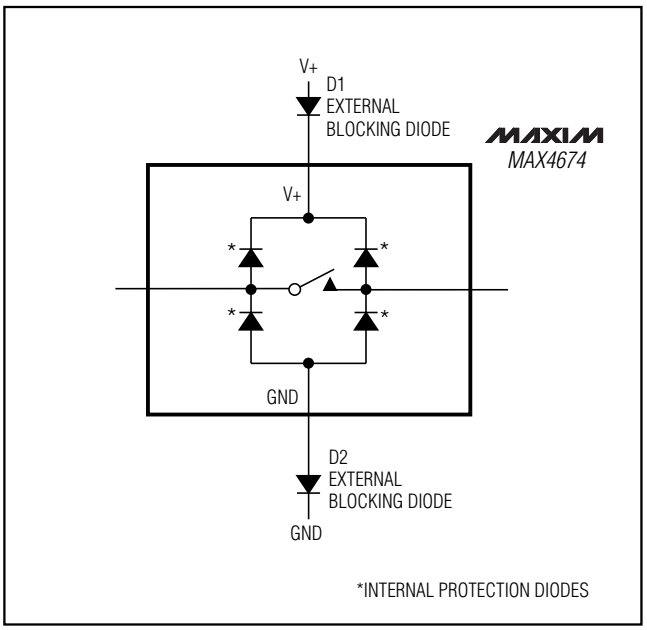

Figure 1. Overvoltage Protection Using External Blocking Diodes

High-Frequency Performance

In 50Ω systems, signal response is reasonably flat up to 50MHz (see the *Typical Operating Characteristics*). Above 20MHz, the on response has several minor peaks that are highly layout dependent. The problem is not turning the switch on, but turning it off. The off-state switch acts like a capacitor and passes higher frequencies with less attenuation. At 10MHz, off-isolation is about -50dB in 50Ω systems, becoming worse (approximately 20dB per decade) as frequency increases. Higher circuit impedances also degrade off-isolation. Adjacent channel attenuation is about 3dB above that of a bare IC socket and is entirely due to capacitive coupling.

NOTES:
1. D&E DO NOT INCLUDE MOLD FLASH.
2. MOLD FLASH OR PROTRUSIONS NOT TO EXCEED 0.15mm (.006").
3. LEADS TO BE COPLANAR WITHIN 0.10mm (.004").
4. CONTROLLING DIMENSION: MILLIMETERS.
5. MEETS JEDEC MS012.
6. N = NUMBER OF PINS.

DALLAS SEMICONDUCTOR MAXIM

DALLAS SEMICONDUCTOR MAXIM
PROPRIETARY INFORMATION

TITLE: PACKAGE OUTLINE 12,16,20,24L QFN, 4x4x0.90 MM

APPROVAL | DOCUMENT CONTROL NO. 21-0106 | REV. E | 1/2

NOTES:

1. DIE THICKNESS ALLOWABLE IS 0.305mm MAXIMUM (.012 INCHES MAXIMUM).
2. DIMENSIONING & TOLERANCES CONFORM MUST TO ASME Y14.5M. – 1994.
3. N IS THE NUMBER OF TERMINALS.
   Nd IS THE NUMBER OF TERMINALS IN X-DIRECTION &
   Ne IS THE NUMBER OF TERMINALS IN Y-DIRECTION.
4. DIMENSION b APPLIES TO PLATED TERMINAL AND IS MEASURED BETWEEN 0.20 AND 0.25mm FROM TERMINAL TIP.
5. THE PIN #1 IDENTIFIER MUST BE EXISTED ON THE TOP SURFACE OF THE PACKAGE BY USING INDENTATION MARK OR INK/LASER MARKED. DETAILS OF PIN #1 IDENTIFIER IS OPTIONAL, BUT MUST BE LOCATED WITHIN ZONE INDICATED.
6. EXACT SHAPE AND SIZE OF THIS FEATURE IS OPTIONAL.
7. ALL DIMENSIONS ARE IN MILLIMETERS.
8. PACKAGE WARPAGE MAX 0.05mm.
9. APPLIED FOR EXPOSED PAD AND TERMINALS.
   EXCLUDE EMBEDDING PART OF EXPOSED PAD FROM MEASURING.
10. MEETS JEDEC MO220; EXCEPT DIMENSION "b".
11. THIS PACKAGE OUTLINE APPLIES TO PUNCHED QFN (STEPPED SIDES).
