

MAX6325/MAX6341/MAX6350

1ppm/°C, Low-Noise, +2.5V/+4.096V/+5V Voltage References

General Description

The MAX6325/MAX6341/MAX6350 are low-noise, precision voltage references with extremely low, 0.5ppm/°C typical temperature coefficients and excellent, ±0.02% initial accuracy. These devices feature buried-zener technology for lowest noise performance. Load-regulation specifications are guaranteed for source and sink currents up to 15mA. Excellent line and load regulation and low output impedance at high frequencies make them ideal for high-resolution data-conversion systems up to 16 bits.

The MAX6325 is set for a 2.5V output, the MAX6341 is set for a 4.096V output, and the MAX6350 is set for a 5V output. All three provide for the option of external trimming and noise reduction.

19-1203; Rev 1; 1/01

Applications

- High-Resolution Analog-to-Digital and Digital-to-Analog Converters
- High-Accuracy Reference Standard
- High-Accuracy Industrial and Process Control
- Digital Voltmeters
- ATE Equipment
- Precision Current Sources

Features

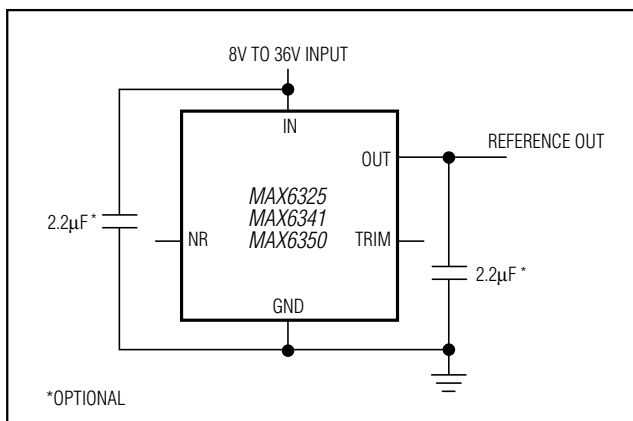

- ◆ Ultra Low, 1ppm/°C Max Tempco
- ◆ Very Low, 1.5µVp-p Noise (0.1Hz to 10Hz) (MAX6325)
- ◆ ±0.02% Initial Accuracy (MAX6350)
- ◆ ±15mA Output Source and Sink Current
- ◆ Low, 18mW Power Consumption (MAX6325)
- ◆ Industry-Standard Pinout
- ◆ Optional Noise Reduction and Voltage Trim
- ◆ Excellent Transient Response
- ◆ 8-Pin SO Package Available
- ◆ Low, 30ppm/1000hr Long-Term Stability
- ◆ Stable for All Capacitive Loads

MAX6325/MAX6341/MAX6350

1ppm/°C, Low-Noise, +2.5V/+4.096V/+5V Voltage References

ABSOLUTE MAXIMUM RATINGS

(Voltages Referenced to GND)

IN	-0.3V to 40V	8-Pin SO (derate 5.88mW/°C above +70°C)	471mW
OUT, TRIM	-0.3V to 12V	8-Pin CERDIP (derate 8.00mW/°C above +70°C)	640mW
NR	-0.3V to 6V	Operating Temperature Ranges	
OUT Short-Circuit to GND Duration ($V_{IN} \leq 12V$)	Continuous	MAX63_ _ C_ A	0°C to +70°C
OUT Short-Circuit to GND Duration ($V_{IN} \leq 40V$)	5s	MAX63_ _ E_ A	-40°C to +85°C
OUT Short-Circuit to IN Duration ($V_{IN} \leq 12V$)	Continuous	MAX63_ _ MJA	-55°C to +125°C
Continuous Power Dissipation ($T_A = +70^\circ\text{C}$)		Storage Temperature Range	-65°C to +150°C
8-Pin Plastic DIP (derate 9.09mW/°C above +70°C)	727mW	Lead Temperature (soldering, 10s)	+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS—MAX6325

($V_{IN} = +10V$, $I_{OUT} = 0mA$, $T_A = T_{MIN}$ to T_{MAX} , unless otherwise noted. Typical values are at $T_A = +25^\circ\text{C}$.)

PARAMETER	SYMBOL	CONDITIONS	T_A	MIN	TYP	MAX	UNITS

			E		1	7	
			M		2	9	
		Sinking: $-15mA \leq I_{OUT} \leq 0mA$	C		1	6	
			E		1	7	
			M		6	15	
Supply Current	I_{IN}		+25°C		2.0	3.0	mA
			C, E, M			3.3	
Trim-Adjustment Range	ΔV_{OUT}	(Figure 1)	C, E, M	±30	±50		mV
Turn-On Settling Time	t_{ON}	To ±0.01% of final value	+25°C		10		µs
Output Noise Voltage (Note 3)	e_n	$0.1Hz \leq f \leq 10Hz$	+25°C		3.0		µVp-p
		$10Hz \leq f \leq 1kHz$	+25°C		2.5	5.0	µVRMS
Temperature Hysteresis		(Note 4)	+25°C		20		ppm
Long-Term Stability	$\Delta V_{OUT}/t$		+25°C		30		ppm/1000hr

Note 1: Temperature coefficient is measured by the box method; i.e., the maximum ΔV_{OUT} is divided by $\Delta T \times V_{OUT}$.

Note 2: Line regulation ($\Delta V_{OUT} / (V_{OUT} \times \Delta V_{IN})$) and load regulation ($\Delta V_{OUT} / (V_{OUT} \times \Delta I_{OUT})$) are measured with pulses and do not include output voltage changes due to die-temperature changes.

Note 3: Noise specifications are guaranteed by design.

Note 4: Temperature hysteresis is specified at $T_A = +25°C$ by measuring V_{OUT} before and after changing temperature by +25°C, using the plastic DIP package.

Pin Description

PIN	NAME	FUNCTION
1, 7, 8	I.C.	Internally Connected. Do not use.
2	IN	Positive Power-Supply Input
3	NR	Noise Reduction. Optional capacitor connection for wideband noise reduction. Leave open if not used (Figure 2).
4	GND	Ground
5	TRIM	External Trim Input. Allows $\pm 1\%$ output adjustment (Figure 1). Leave open if not used.
6	OUT	Voltage Reference Output

Detailed Description

Temperature Stability

The MAX6325/MAX6341/MAX6350 are highly stable, low-noise voltage references that use a low-power temperature-compensation scheme to achieve laboratory-standard temperature stability. This produces a nearly flat temperature curve, yet does not require the power associated with heated references.

The output voltage can be trimmed a minimum of 0.6% by connecting a 10k Ω potentiometer between OUT and GND, and connecting its tap to the TRIM pin, as shown in Figure 1. The external trimming does not affect temperature stability.

Figure 1. Output Voltage Adjustment

Noise Reduction

To augment wideband noise reduction, add a 1 μ F capacitor to the NR pin (Figure 2). Larger values do not improve noise appreciably (see *Typical Operating Characteristics*).

Noise in the power-supply input can affect output noise, but can be reduced by adding an optional bypass capacitor to the IN pin and GND.

Bypassing

The MAX6325/MAX6341/MAX6350 are stable with capacitive load values from 0 μ F to 100 μ F, for all values of load current. Adding an output bypass capacitor can help reduce noise and output glitching caused by load transients.

Applications Information

Negative Regulator

Figure 3 shows how both a +5V and -5V precision reference can be obtained from a single, unregulated +5V supply. A MAX865 generates approximately ± 9 V to operate the MAX6350 reference and MAX400 inverting amplifier. The +5V is inverted by the ultra-low offset MAX400 op amp. Resistor R1 is optional, and may be used to trim the ± 5 V references. R2 and R4 should be matched, both in absolute resistance and temperature coefficient. R3 is optional, and is adjusted to set the -5V reference.
