## 3.3 V 1:2 Fanout Differential LVPECL/LVDS to LVTTTL Translator

### Description

The MC100EPT26 is a 1:2 Fanout Differential LVPECL/LVDS to LVTTTL translator. Because LVPECL (Positive ECL) or LVDS levels are used only +3.3 V and ground are required. The small outline 8-lead package and the 1:2 fanout design of the EPT26 makes it ideal for applications which require the low skew duplication of a signal in a tightly packed PC board.

The  $V_{BB}$  output allows the EPT26 to be used in a Single-Ended input mode. In this mode the  $V_{BB}$  output is tied to the  $\overline{D0}$  input for a non-inverting buffer or the D0 input for an inverting buffer. If used, the  $V_{BB}$  pin should be bypassed to ground with  $> 0.01 \mu\text{F}$  capacitor. For a Single-Ended direct connection, use an external voltage reference source such as a resistor divider. Do not use  $V_{BB}$  for a Single-Ended direct connection or port to another device.

### Features
