

MC74ACT564

Octal D-Type Flip-Flop with 3-State Outputs

The MC74ACT564 is a high-speed, low power octal flip-flop with a buffered common Clock (CP) and a buffered common Output Enable (\overline{OE}).

The information presented to the D inputs is stored in the flip-flops on the LOW-to-HIGH Clock (CP) transition.

The MC74ACT564 device is functionally identical to the MC74ACT574, but with inverted outputs.

Features

- Inputs and Outputs on the Opposite Sides of the Package Allowing Easy Interface with Microprocessors
- Useful as Input or Output Port for Microprocessor
- Functionally Identical to the MC74ACT574 but with Inverted Outputs
- 3-State Outputs for Bus-Oriented Applications
- Outputs Source/Sink 24 mA
- TTL Compatible Inputs
- These are Pb-Free Devices

FUNCTIONAL DESCRIPTION

The MC74ACT564 consists of eight edge-triggered flip-flops with individual D-type inputs and 3-state complementary outputs. The buffered clock and buffered Output Enable are common to all flip-flops. The eight flip-flops will store the state of their individual D inputs that

meet the setup and hold times requirements on the LOW-to-HIGH Clock (CP) transition. With the Output Enable (\overline{OE}) LOW, the contents of the eight flip-flops are available at the outputs. When \overline{OE} is HIGH, the outputs go to the high impedance state. Operation of the \overline{OE} input does not affect the state of the flip-flops.
