

## **Features**

- 72 V rated
- Cured, flame retardant epoxy polymer insulating material meets UL 94 V-0 requirements
- RoHS compliant\* and halogen free\*\*

## **Applications**

Almost anywhere there is a low voltage power supply, up to 72 V and a load to be protected, including:

- Security and fire alarm systems
- Loudspeakers
- Power transformers

### **Environmental Characteristics**

Item	Condition	Criteria		
Operating Temperature	-40 °C to +85 °C			
Recommended Storage	+40 °C max. / 70 % R.H. max.			
Passive Aging	+85 °C, 1000 hours	±5 % typical resistance change		
Humidity Aging	+85 °C, 85 % R.H. 1000 hours	±5 % typical resistance change		
Thermal Shock	-40 °C to +85 °C, 10 times	±10 % typical resistance change		
Solvent Resistance	MIL-STD-202, Method 215	No change (marking still legible)		
Vibration	MIL-STD-883C, Method 2007.1 Condition A	No change (R <sub>min</sub> < R < R <sub>1max</sub> )		
Moisture Sensitivity Level (MSL)	See Note			
ESD Classification	Class 6 (per AEC-Q200-2, HBM)			

### **Test Procedures and Requirements**

Item	Test Condition	Accept/Reject Criteria
Visual/Mechanical	Verify dimensions and materials	Per MF physical description
Resistance	In still air @ 23 °C	$R_{min} \le R \le R_{max}$
Time to Trip	5 times I <sub>hold</sub> , V <sub>max</sub> , 23 °C	T ≤ max. time to trip (seconds)
Hold Current	30 min. at I <sub>hold</sub>	No trip
Trip Cycle Life	V <sub>max</sub> , I <sub>max</sub> , 100 cycles	No arcing or burning
Trip Endurance	V <sub>max</sub> , 48 hours	No arcing or burning
Solderability	245 °C ±5 °C, 5 seconds	95 % min. coverage

## $\textbf{WARNING} \ \ \textbf{Cancer and Reproductive Harm -} \underline{www.P65Warnings.ca.gov}$

\* RoHS Directive 2015/863, Mar 31, 2015 and Annex.

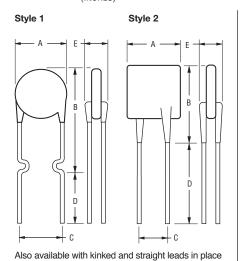

<sup>\*</sup> Bourns follows the prevailing definition of "halogen free" in the industry. Bourns considers a product to be "halogen free" if (a) the Bromine (Br) content is 900 ppm or less; (b) the Chlorine (Cl) content is 900 ppm or less; and (c) the total Bromine (Br) and Chlorine (Cl) content is 1500 ppm or less.

**BOURNS** 

### **Application Notice**

- Users are responsible for independent and adequate evaluation of Bourns® Multifuse® Polymer PTC devices in the user's
  application, including the PPTC device characteristics stated in the applicable data sheet.
- Polymer PTC devices must not be allowed to operate beyond their stated maximum ratings. Operation in excess of such
  maximum ratings could result in damage to the PTC device and possibly lead to electrical arcing and/or fire. Circuits with
  inductance may generate a voltage above the rated voltage of the polymer PTC device and should be thoroughly evaluated
  within the user's application during the PTC selection and qualification process.
- Polymer PTC devices are intended to protect against adverse effects of temporary overcurrent or overtemperature
  conditions up to rated limits and are not intended to serve as protective devices where overcurrent or overvoltage conditions
  are expected to be repetitive or prolonged.
- In normal operation, polymer PTC devices experience thermal expansion under fault conditions. Thus, a polymer PTC
  device must be protected against mechanical stress, and must be given adequate clearance within the user's application to
  accommodate such thermal expansion. Rigid potting materials or fixed housings or coverings that do not provide adequate
  clearance should be thoroughly examined and tested by the user, as they may result in the malfunction of polymer PTC
  devices if the thermal expansion is inhibited.
- Exposure to lubricants, silicon-based oils, solvents, gels, electrolytes, acids, and other related or similar materials may adversely affect the performance of polymer PTC devices.
- Aggressive solvents may adversely affect the performance of polymer PTC devices. Conformal coating, encapsulating, potting, molding, and sealing materials may contain aggressive solvents including but not limited to xylene and toluene, which are known to cause adverse effects on the performance of polymer PTCs. Such aggressive solvents must be thoroughly cured or baked to ensure their complete removal from polymer PTCs to minimize the possible adverse effect on the device.
- Recommended storage conditions should be followed at all times. Such conditions can be found on the applicable data sheet and on the Multifuse® Polymer PTC Moisture/Reflow Sensitivity Classification (MSL) note: <a href="https://www.bourns.com/docs/RoHS-MSL/msl">https://www.bourns.com/docs/RoHS-MSL/msl</a> mf.pdf
