MM930Mini Module

High Speed USB-Serial

MCU Development Module

1 Introduction

The MM930Mini Module is a USB microcontroller development module in the Bridgetek product range. It utilizes the FT930Q bridge chip which can handle all USB signalling and protocols. It is ideal for development purposes to quickly prove functionality of adding USB to a target design. Refer to [DS_FT930_1_2_3](#) datasheet for details.

1.1 Features

- USB 2.0 Hi-Speed compatible
- Reduced development time
- Rapid integration into existing systems
- USB powered – no external power supply needed
- Based on the USB Hi-Speed FT930Q device
- Entire USB protocol handled by D2xx hardware engine
- USB micro-B connector common on many commercial devices
- On-board 500mA 3.3V LDO regulator, 12MHz crystal, 32kHz crystal.
- Asynchronous Serial data transfer rates from 300 baud to 12 Mbaud at TTL levels
- One SPI master supports single / dual / quad modes of data transfer. Clock rate is up to 25 MHz
- One SPI slave support single data transfer with 25MHz clock
- I2C bus interface can be configured as master or slave, with data transfers up to 3.4Mbps
- Support for USB suspend and resume
- UHCI / OHCI / EHCI host controller compatible
- -40°C to +85°C operating temperature range

Neither the whole nor any part of the information contained in, or the product described in this manual, may be adapted or reproduced in any material or electronic form without the prior written consent of the copyright holder. This product and its documentation are supplied on an as-is basis and no warranty as to their suitability for any particular purpose is either made or implied. Bridgetek Pte Ltd will not accept any claim for damages howsoever arising as a result of use or failure of this product. Your statutory rights are not affected. This product or any variant of it is not intended for use in any medical appliance, device or system in which the failure of the product might reasonably be expected to result in personal injury. This document provides preliminary information that may be subject to change without notice. No freedom to use patents or other intellectual property rights is implied by the publication of this document. Bridgetek Pte Ltd, 178 Paya Lebar Road, #07-03, Singapore 409030. Singapore Registered Company Number: 201542387H

1.2 USB Compliant

The MM930Mini Modules are fully compliant with the USB 2.0 specifications.

2 Module Description

The FT930 on the Mini Module is a Bridgetek RISC microcontroller device with a D2XX¹ hardware engine. The D2XX hardware engine makes it easy to create bridge applications to a variety of FT930 peripherals such as UART, SPI, I²C, SD-Host, and PWM etc. The FTD2XX library simplifies software application development.

The FT930 device features two full UARTs or four simple UARTs, Quad SPI master, SPI slave, SD-Host controller, I²C, four 16-bit timers, one 32-bit watchdog timer, 8 PWMs, two 10-bit DACs, 3-channel 8-bit ADC, and a high speed USB 2.0 peripheral controller. All components used, including the MM930Mini are Pb-free (RoHS compliant).

The MM930Mini Module connects the pins from the FT930 IC to two 30-way dual-row pin headers. Each header is grouped in sets of 10-pins by the top silkscreen for easy pin counting. The 30-way pin header allows easy connection to PCB header sockets and ribbon cables.

The MM0930Mini Module is preloaded with a sample program. The sample program demonstrates the use of the D2XX hardware engine. The D2XX hardware engine is configured to operate four D2XX interfaces. The sample program bridges each of the D2XX interfaces to a UART.

When the module is first attached to a Windows PC, D2XX device drivers are automatically installed from Windows Update. At the end of the installation, four FT930 Serial Ports will be installed in the system. For other OS, driver and library support is available from [FTDI Drivers](#).

Figure 1-2 illustrates a way to access the D2XX UART bridge.

Figure 2-1 Using the MM930Mini Module VCOM

Additionally, the user can communicate via Standard USB Class Drivers with the FT930 in non-D2XX mode, with the MM930Mini Module working as a BOMS/HID/CDC device as shown in Figure 2-2. Example programs that implement these device classes are available from FT9XX Toolchain V2.3.0 and later versions.

¹ Used under agreement between BRT and FTDI, D2XX is the popular FTDI USB driver used on its FT2XX USB UART/FIFO Bridge platforms. It can be accessed directly or through a virtual COM port.

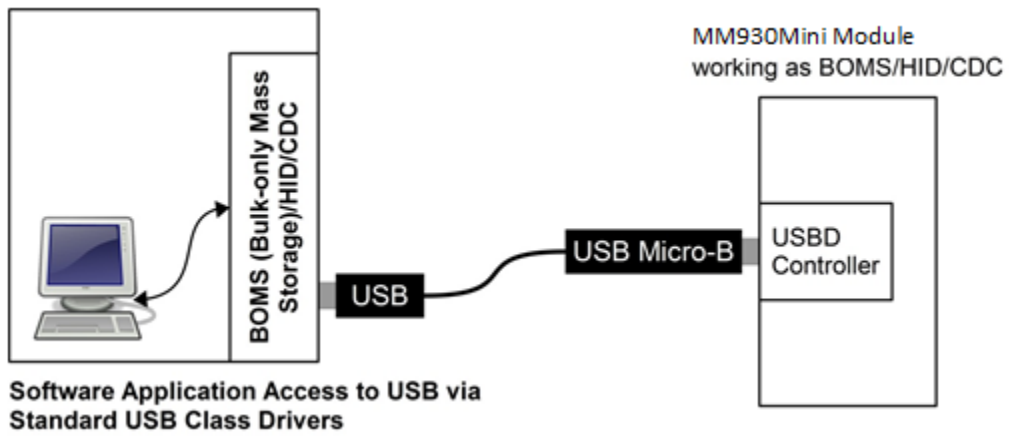

Figure 2-2 Using the MM930Mini Module as BOMS/HID/CDC

Device Drivers for the MM930Mini Module are available free from <http://brtchip.com/firmware/>.

3 Typical Applications

- Rapid USB integration into existing electronic systems.
- Prototyping platform for USB interface on new systems.
- USB to SPI, I²C, SD-Card, PWM Audio, ADC, and DAC interfaces.
- USB to multi-port asynchronous serial interfaces (up to 4 ports available).
- GPIOs may be used freely to implement any bridging protocol.

3.1 Driver Support

Refer to [FTDI Drivers](#) for up-to-date driver support information.

4 Electrical Details

The electrical details and connections to the MM930Mini Module are shown in Figure 3.1 and Table 3.1 to Table 4-3.

Figure 4-1 MM930Mini Module Electrical Connections (Top View)

Connector	Name	Description
JP1	VBUS to 5V jumper	Connects VBUS to input of regulator.
JP2	Regulator 3.3V to FT930 3.3V jumper	Connects output of regulator to 3.3V rail.
CN1	30-way I/O pin header	Power & I/O signals. See Table 4-2.
CN2	30-way I/O pin header	Power & I/O signals. See Table 4-3.
CN3	Programming Interface	Interface to UMFTPD2A module. To program and debug firmware running on the FT93x series.
CN4	USB micro-B connector	Hi-Speed USB port to FT930.

Table 4-1 MM930Mini Module Connectors

Connector Pin	Name	Description
CN1-1	DTR_UART0	FT930Q UART0_DTR/UART1_RXD/GPIO26

CN2-16	I2C_SDA	FT930Q I2CM_SDA/I2CS_SDA/GPIO13
CN2-17	DAC0	FT930Q DAC0 output pin
CN2-18	GND	0V
CN2-19	DAC_REFP_2	Alternative DAC voltage reference
CN2-20	DAC1	FT930Q DAC1 output pin
CN2-21	GND	0V
CN2-22	GND	0V
CN2-23	ADC_REFP_2	Alternative ADC voltage reference
CN2-24	ADC1	ADC1 input pin
CN2-25	ADC2	ADC2 input pin
CN2-26	ADC3	ADC3 input pin
CN2-27	VCCIO_3V3	VCCIO3V3
CN2-28	VCCIO_3V3	VCCIO3V3
CN2-29	VDD_5V0	5VDC input to the 3.3V IC regulator (U2)
CN2-30	VCCIO_3V3	VCCIO3V3

Table 4-3 MM930Mini Module Connection – CN2

4.1 Power Supply Configuration

The MM930Mini Module allows configuration with both USB Bus-Powered designs and USB Self-Powered designs:

USB Bus-Powered:

- 1) Connect VBUS to VDD_5V0 (JP1, connect pin 1 to pin 2). This connection takes the power from the USB bus (VBUS) and connects it to the input of the voltage regulator on the MM930Mini Module. The voltage regulator, in turn, provides power to VCCIO_3V3, VUSB_3V3, and VCC_3V3A pins on the FT930Q chip.
- 2) Connect VREG_3V3 to VCCIO_3V3 (JP2, connect pin 1 to pin 2). This connection provides 3.3V power to VCCIO_3V3 on the FT930Q chip.

USB Self-Powered:

- 1) Leave VBUS to VDD_5V0 (JP1) unconnected.
- 2) Connect an external 5.0VDC power supply to VDD_5V0 (5.0VDC to CN2, pin 29). This connection provides power from an external power supply and connects it to the input of the voltage regulator on the MM930Mini Module.
- 3) Connect VREG_3V3 to VCCIO_3V3 (JP2, connect pin 1 to pin2). This connection provides 3.3V power to VCCIO_3V3 on the FT930Q chip.

On-Board Regulator

The MM930Mini Module includes an on-board SPX3819 500mA low-noise LDO voltage regulator (U2), see Figure 4-2. This regulator provides power to internal and external circuits up to 500mA. The 10nF capacitor (C22) lowers the output noise of the regulator.

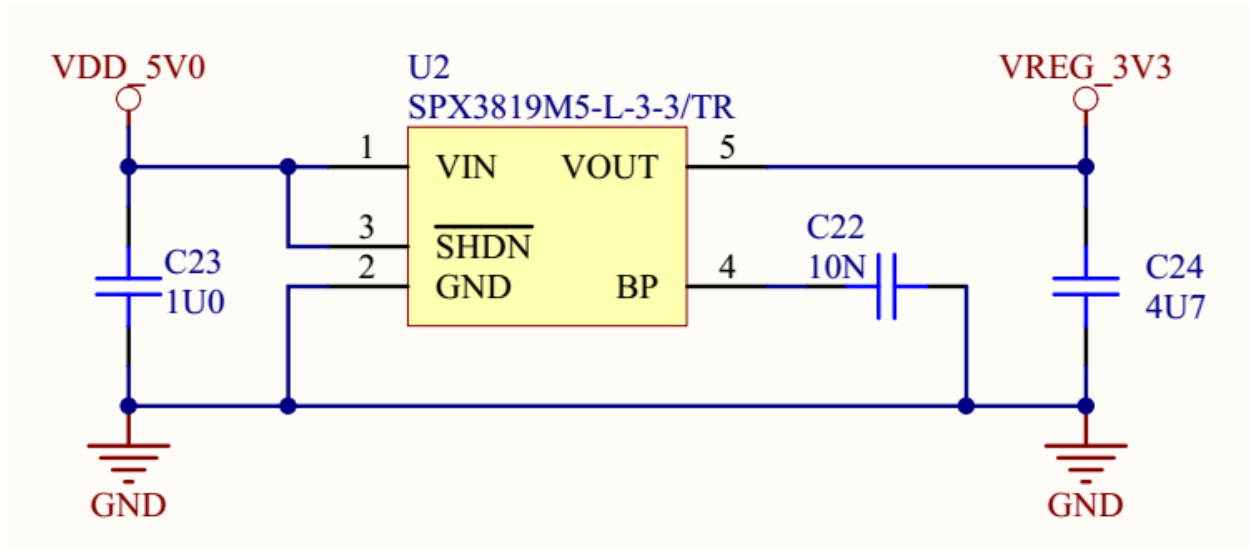

Figure 4-2 Power Supply

5 Mechanical Details

The mechanical details of the MM930Mini Module are shown in Figure 5-1:

Figure 5-1 MM930Mini Module Dimensions

All dimensions are in millimetres.

The headers CN1 and CN2 are mounted to the bottom of the PCB. The overall height below the PCB is 8.38mm, with a body which exposes 5.84mm of the pins. The pins are 0.64mm (0.025-inch) square.

The micro-B USB connector has a height of 2.45mm.
