| 5. External I/O bus female pin header | |

4.1 Power Supply

The MM932LC development board is powered from a USB power supply source via the Micro-B USB **CN3** port. A power jumper **JP1** connects the USB power (VBUS_IN) to the input of an LDO regulator (VDD_5V).

A red LED (LED1) will illuminate after the +5V power supply is applied. This supply will also drive a fixed +3.3V LDO regulator which will provide power to all peripherals of the FT932 microcontroller.

Figure 4-2 – Power supply

4.2 Microcontroller

The FT932Q 48-pin QFN microcontroller (U1) provided on the board belongs to the 32-bit FT93x Microcontroller family from Bridgetek. For details of the FT932 Microcontroller, refer to the [FT93x datasheet](#).

Figure 4-3 – FT932 Microcontroller

There is one crystal used on the MM932LC development board. The 12MHz crystal (Y1) is the primary system clock frequency supplying the FT932Q IC.

The FT932Q IC on this board is operated from a single supply of +3.3V. The power output pins have decoupling capacitors as specified in the datasheet.

4.3 Flash Memory

The MM932LC module contains an on-board Winbond Serial Flash memory W25Q128FV (128M-bit/16Mbyte) with Dual/Quad SPI interface, which is ideal for code shadowing and storing voice, text and data.
