

Wireless Water Temperature Sensors

General Description

The ALTA Wireless Water Temperature Sensor uses a sealed, type NTC thermistor with 3 ft lead wires to measure water temperature.

- Accurate to $\pm 1^{\circ}\text{C}$ ($\pm 1.8^{\circ}\text{F}$)
- Increased accuracy by user calibration to $\pm 0.25^{\circ}\text{C}$ ($\pm 0.45^{\circ}\text{F}$)
- Probe temperature range of -40°C to $+100^{\circ}\text{C}$ (-40°F to $+212^{\circ}\text{F}$)
- Sealed, 3 ft lead wires

Principle of Operation

The ALTA Wireless Water Temperature Sensor can collect temperature data of water or other non-combustible liquids using a sealed NTC thermistor with 3 foot lead wires. The sensor is programmed to sleep for a user defined time interval (heartbeat) and then wakeup, send power to the NTC Thermistor and wait for it to stabilize, and convert the analog data, mathematically compute the temperature and transmit the data to the gateway. To stay within the abilities of the processor, the temperature is computed off a data table provided by the manufacturer. To reduce error, a variable resistor configuration is implemented over specified temperature ranges. Temperature data can be displayed in degrees Fahrenheit or Celsius.

Industry leading 25 month NIST certified product included on leaded temperature sensors.

Power Options

The standard version of this sensor is powered by two replaceable 1.5 V AA sized batteries (included with purchase).

This sensor is also available with a line power option. The line powered version of this sensor has a barrel power connector allowing it to be powered by a standard 3.0–3.6 V power supply. The line powered version also uses two standard 1.5 V AA batteries as backup for uninterrupted operation in the event of line power outage.

Power options must be selected at time of purchase, as the internal hardware of the sensor must be changed to support the selected power requirements.
