

MODM7AE70

Ethernet Core Module

100 Version with RJ-45 | 200 Version with 10-pin header

DATASHEET

Key Points

- Use as a high-performance single board computer or add Ethernet connectivity to a new or existing design
- Customize with a development kit and begin writing application code immediately!
- Industrial temperature range (-40°C to 85°C)

Device Connectivity

- 10/100Mbps Ethernet with IEEE1588 PTP frames and 802.3az Energy-efficient support
- Up to 2 USARTs, 5 UARTs, 3 I²C, and 4 SPI
- 11 Analog to Digital (ADC) Inputs

- 1 Digital to Analog (DAC) Output
- 53 digital I/Os
- 16-bit External Bus Interface

Performance and memory

- 32-bit 300 MHz Processor
- 8MB SDRAM and 2MB Flash

Companion development kit

The following is available with the development kit:

- Customize any aspect of operation including web pages, data filtering, or custom network applications
- Development software: NB Eclipse IDE, Graphical debugger, deployment tools, and examples
- Communication software: TCP/IP stack, SSL/TLS 1.3, HTTPS web server, FTP, E-mail, and flash file system
- System software: NBRRTOS, ANSI C/C++ compiler and linker

Specifications

Processor and Memory

Microchip® SAM E70 32-bit ARM® Cortex®-M7 processor running at 300 MHz clock speed with 8MB SDRAM, 2MB embedded flash, 384Kb embedded multi-port SRAM, and 1KB embedded low-power backup RAM¹.

Single and double precision hardware Floating Point Unit (FPU), DSP Instructions, Thumb®-2 Instruction Set.

1. While the RAM is usable, it is unsuitable for low-power backup due to the power consumption of the module's components.

Network Interface

10/100 BaseT with RJ-45 connector (100 Version)

10-pin header (200 Version)

Data I/O Interface (P1 and P2)

- Up to 7 Asynchronous Serial Ports: 2 USARTs, 5 Two-wire UARTs
- Up to 53 digital I/O
- Up to 3 Two-Wire Interfaces (TWIHS)(I2C-compatible)
- Up to 4 SPI interface
- SD/MMC flash card ready
- 16-bit external bus interface
- Image Sensor Interface (ISI)
- Quad SPI Interface
- 11 Analog to Digital (ADC) Inputs
- 1 Digital to Analog (DAC) Output

SPI Configurations

The SPI interfaces are available from the following:

- 1 dedicated SPI
- 1 Quad SPI that can be configured to run as a native SPI or QSPI
- 2 from USART0 and USART1 that can be configured as SPI

Serial Configurations

The USARTs can be configured in the following ways:

- USART0/1
- ISO7816
- IrDA®
- RS-422/485
- Manchester

Note: USART0/1 supports SPI. USART1 supports Modem and LON mode.

Additional Peripherals

- Ethernet AVB support with IEEE802.1AS Time-stamping and IEEE802.1Qav credit-based traffic-shaping hardware support.
- Two master Controller Area Networks (MCAN) with Flexible Data Rate (CAN-FD) with SRAM-based mailboxes, time- and event-triggered transmission.
- Serial Synchronous Controller (SSC) with I2S and TDM support.
- High-speed Multimedia Card Interface (HSMCI) (SDIO/SD Card/e.MMC)
- Nine 16-bit Timer/Counters, can be chained to create 32 bit and 48 bit timer/counters. Functions include capture, compare, interrupt generation, frequency measurement, event counting, interval measurement, quadrature decoder, pulse generation, waveform generation, synchronization with PWM peripheral, delay timing pulse width modulation, 2-bit Gray Up/Down Counter for stepper motor control. Each channel has

three external clock inputs, five internal clock inputs and two multi-purpose input/output signals.¹

- 12-bit 1Msps-per-channel Digital-to-Analog Controller (DAC) with differential and oversampling modes.
- One Analog Comparator (ACC) with flexible input selection, selectable input hysteresis.
- Watchdog Timer
- Three Two-Wire Interfaces (TWIHS) (I2C-compatible). Two-wire bus, made up of one clock line and one data line with speeds of up to 400 kbps in Fast mode, and up to 3.4 Mbps in High-speed slave mode. Easily interface to EEPROM and I²C-compatible devices, such as a Real-Time Clock (RTC), Dot Matrix/Graphic LCD Controller
- Dedicated SPI. Note that USARTs 0 and 1 can also be used as SPI interfaces, as can the Quad SPI when in single bit mode.
- Seventeen 16-bit PWMs with complementary outputs, Dead Time Generator, fault inputs motor control and an external trigger.
- Two Analog Front-End Controllers (AFEC). The AFEC is based on an Analog Front-End cell (AFE) integrating a 12-bit Analog-to-Digital Converter (ADC), a Programmable Gain Amplifier (PGA), a Digital-to-Analog Converter (DAC) and two 6-to-1 analog multiplexers, making possible the conversions of 12 analog lines or two simultaneous conversions of 6 analog lines. The AFEC supports a 12-bit resolution mode which can be extended up to a 16-bit resolution by digital averaging. Up to 2Msps conversion rate. Automatic correction of gain and offset errors.
- Parallel Capture Interface consisting of clock, data and enable signals to continuously read data from peripherals such as a CMOS digital image sensor, a high-speed parallel ADC, a DSP synchronous port in synchronous mode, etc.
- Up to 53 GPIO lines. Each has several input or output modes such as pull-up or pull-down, input Schmitt triggers, multi-drive (open-drain), glitch filters, debouncing or input change interrupt. Each GPIO line also has an on-die serial resistor for impedance matching, reducing overshoot, undershoot and EMI.
- Temperature sensor internal to processor.

LEDs

Link and Speed (100 Version only, on RJ-45)

Physical Characteristics

Dimensions (inches): 2.60" x 2.00"

Weight: 1 oz.

Mounting Holes: 2 x 0.125" dia.

Power

DC Input Voltage: 3.3V @ 100mA typical, 250mA max

Low power modes are able to reduce power draw, with consumption dependant on enabled peripherals.

Environmental Operating Temperature

-40° to 85° C

RoHS Compliance

The Restriction of Hazardous Substances guidelines ensure that electronics are manufactured with fewer environment harming materials.

¹ Some timer I/O is unavailable due to SDRAM and Ethernet interfaces. Please consult the pinout for further details.

Part Numbers

MODM7AE70 Ethernet Core Module (100 Version, with RJ-45)

Part Number: MODM7AE70-100IR

MODM7AE70 Ethernet Core Module (200 Version, with 10-pin header)

Part Number: MODM7AE70-200IR

MOD7AE70 LC Development Kit

Part Number: NNDK-MODM7AE70LC-KIT

Kit includes all the hardware and software you need to customize the included platform hardware. See NetBurner Store product page for package contents. Note: Includes the MOD-DEV-70 development board.

Ordering Information

E-mail: sales@netburner.com

Online Store: www.NetBurner.com

Telephone: 1-800-695-6828

Pinout and Signal Description

The 200 version board has a 10-pin header instead of an RJ-45 jack. This header enables you to relocate the jack to another location or to add a different jack with power over ethernet (PoE) capabilities to your module. Table 1 provides descriptions of the pin functions of the 10-pin header.

Refer to the application note, “Adding an External Ethernet RJ-45 Connector and PCB Layout Guidelines for NetBurner -200 Version Modules”, for details and examples.

Table 1: Pinout and Signal Descriptions for Ethernet Connector ⁽¹⁾

Pin	Signal	Description
1	TX-	Transmit -
2	TX+	Transmit +
3	TXCT ¹	Transmit Data Center Tap
4	RX+	Receive +
5	RX-	Receive -
6	RXCT ¹	Receive Data Center Tap
7	GND	Ground
8	N/C	Not Connected
9	LED	LED control sink, link/activity
10	LED	LED control sink, speed

Note:

- Ethernet magnetics center tap voltage provided by NetBurner device.

MODM7AE70

The module has two dual in-line 50 pin headers which enable you to connect to one of our standard NetBurner Carrier Boards, or a board you create on your own. Table 2-3 provides descriptions of pin function of the module header. Most pins have a Primary and Alternate function. In the Primary function mode you can select one of up to four peripheral functions, A through D.

Table 2: Pinout and Signal Descriptions for P1 Connector⁽¹⁾

Pin	Port	GPIO	P1 Connector			
			Peripheral A		Peripheral B	Peripheral D
			Peripheral C	Alternate	Alternate	
1		GND				
2		GND				
3		VCC_3V				
4	PC8	X	Lower Byte Write Access (NWR0) / Write Enable (NWE)		Timer 7 Line A (TIOA7)	
5 ¹	PA22	X	SSC Receive Clock (100K pull-up at reset)(RK) Bus Chip Select 2 (NCS2)	PWM 0 External Trigger (PWMCO_PWMEXTRG1)		Parallel Capture Clock Input (PIODCCLK) ¹
6 ¹	PC14	X	Bus Chip Select 0 (NCS0) CAN 1 Transmit (CANTX1)		Timer 8 Clock (TCLK8)	
7 ¹	PD19	X	Bus Chip Select 3 (NCS3) Serial Port 6 TX (UTXD4) ⁵			
8 ¹	PC11	X	Read Signal (NRD)	Timer 8 Line A (TIOA8)		
9	PD15		NWR1/NBS1			
10	PA20		A16/BA0			
11			D0		Transfer in Progress (TIP) footnote ²	
12	PC0			PWM 0 Channel 3 Output High (PWMC0_PWMH3)		
13	PC13	X	External Wait Signal (NWAIT)			AFE 1 ADC Input 1 (AFE1_ADI) ³
14	PC2			D2		
15	PC1			D1		
16	PC4			D4		

Note:

- When the External Bus Interface (EBI) peripheral is enabled, this signal is locked to EBI functionality. Trying to use this signal while it is in use by the EBI peripheral can damage the module.

47	PA19	X	A15		PWM 0 Channel 0 Output Low (PWM0_PWM0_L)	AFE 0 ADC Input 8 (AFE0_ADC8)
48	VCC_V3				Sound Controller 1 Master Clock (I2SC1_MCK)	Wakeup Pin 9 (WKUP9) ⁴
49	GND					
50	GND					

Note:

- To select this extra function, refer to Section 32.5.14 “Parallel Capture Mode”.
- Logical AND of PA.22, PC.14, PD.19. Typically used to control the enable of an external data bus buffer.
- To select this extra function, refer to Section 50.5.1 “I/O Lines”.
- Analog input has priority over WKUPx pin. To select the analog input, refer to Section 50.5.1 “I/O Lines”. WKUPx can be used if the PIO controller defines the I/O line as “input”.
- See Table 5 for Serial Port to USART/JUART mapping.

50	VCC_3V					

Note:

1. WKUPx can be used if the PIO Controller defines the I/O line as "input".
2. To select this extra function, refer to Section 32.5.14 "Parallel Capture Mode".
3. PIODCEN1/PIODCx has priority over WKUPx. Refer to Section 32.5.14 "Parallel Capture Mode".
4. Refer to Section 22.4.2 "Slow Clock Generator".
5. To select this extra function, refer to Section 50.5.1 "I/O Lines".
6. Analog input has priority over WKUPx pin. To select the analog input, refer to Section 50.5.1 "I/O Lines". WKUPx can be used if the PIO controller defines the I/O line as "input".

MODM7AE70

7. DAC0 is selected when DACC_CHER.CH0 is set. DAC1 is selected when DACC_CHER.CH1 is set. Refer to Section 51.7.4 "DACC Channel Enable Register".
8. Analog input has priority over WKUPx pin. To select the analog input, refer to Section 50.5.1 "I/O Lines". To select PIODCEN2, refer to Section 32.5.14 "Parallel Capture Mode".
9. Refer to the System I/O Configuration Register in Section 18. "Bus Matrix (MATRIX)".
10. See Table 5 for Serial Port to USART/UART mapping.
