

Automotive LPDDR5/LPDDR5X SDRAM

MT62F768M32D2, MT62F1536M32D4, MT62F3G32D8

Features

- **Architecture**
 - 17.1 GB/s maximum bandwidth per channel
 - Frequency range: 1067–5 MHz (data rate range per pin: 8533–40 Mb/s with WCK:CK = 4:1)
 - Selectable CKR (WCK:CK = 2:1 or 4:1)
- **LPDDR5X data interface**
 - Single x16 channel/die
 - Double-data-rate command/address entry
 - Differential command clocks (CK_t/CK_c) for high-speed operation
 - Differential data clocks (WCK_t/WCK_c)
 - Differential read strobe (RDQS_t/RDQS_c)
 - 16n-bit or 32n-bit prefetch architecture
 - Command-selectable burst lengths (BL = 16 or 32) in bank group or 16-bank modes
 - Background ZQ calibration/command-based ZQ calibration
 - Link protection (link ECC) support
 - Partial-array self refresh (PASR) and partial-array auto refresh (PAAR) with segment mask
- **Ultra-low-voltage core and I/O power supplies**
 - $V_{DD1} = 1.70\text{--}1.95\text{V}$; 1.80V TYP
 - $V_{DD2H} = 1.01\text{--}1.12\text{V}$; 1.05V TYP
 - $V_{DD2L} = V_{DD2H}$ or $0.87\text{--}0.97\text{V}$; 0.90V TYP
 - $V_{DDQ} = 0.50\text{V}$ TYP or 0.30V TYP (ODT off only)
- **I/O characteristics**
 - Interface-LVSTL 0.5/0.3
 - I/O type: Low-swing single-ended, V_{SS} terminated
 - V_{OH} -compensated output drive
 - Programmable V_{SS} on-die termination (ODT)
 - Non target ODT support
 - DVFSQ support
- **Low-power features**
 - DVFSC: Dynamic voltage frequency scaling core
 - Single-ended CK, single-ended WCK, and single-ended RDQS
 - Data copy
 - Write X

Options

- **Operating Voltage**
 - $V_{DD1}/V_{DD2H}/V_{DD2L}/V_{DDQ}/V_{DDQ}$ (ODT off only): 1.8V/1.05V/0.9V/0.5V/0.3V
- **Array configuration**

– 768 Meg x 32 (768M16 x 2Ch x 1R)	768M32
– 1536 Meg x 32 (768M16 x 2Ch x 2R)	1536M32
– 3 Gig x 32 (1536M16 x 2Ch x 2R)	3G32
- **Device configuration**

– 2 die in package (768M16 x 2 die)	D2
– 4 die in package (768M16 x 4 die)	D4
– 8 die in package (1536M8 x 8 die)	D8
- **FBGA RoHS-compliant, "green" package**

– 315-ball TFBGA 12.4mm x 15.0mm (TYP) Seated height 1.1mm (MAX)	DS
– 315-ball LFBGA 12.4mm x 15.0mm (TYP) Seated height 1.3mm (MAX)	DV
- **Speed grade, cycle time (^tWCK)**

– 8533 Mb/s	-023
– 7500 Mb/s	-026
- **Functional safety features**

– Micron safety features enabled	F
– Suitable for meeting random HW metrics up to ASIL D	
- **Automotive and functional safety**

– AEC-Q100	A ¹
– PPAP	
– ISO 26262 ASIL D compliant development	
– FMEDA (ISO 26262-5:2018, cl. 8, 9)	
– Safety manual	
- **Operating temperature**

– $-40^{\circ}\text{C} \leq T_C \leq +95^{\circ}\text{C}$	IT
– $-40^{\circ}\text{C} \leq T_C \leq +105^{\circ}\text{C}$	AT
– $-40^{\circ}\text{C} \leq T_C \leq +125^{\circ}\text{C}$	UT ²
- **Revision**

	:B

FBGA Part Marking Decoder

Due to space limitations, FBGA-packaged components have an abbreviated part marking that is different from the part number. Micron's FBGA part marking decoder is available at www.micron.com/decoder.

315b: x32 Automotive LPDDR5/LPDDR5X SDRAM Important Notes and Warnings

Important Notes and Warnings

Micron Technology, Inc. ("Micron") reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions. This document supersedes and replaces all information supplied prior to the publication hereof. You may not rely on any information set forth in this document if you obtain the product described herein from any unauthorized distributor or other source not authorized by Micron.

Automotive Applications. Products are not designed or intended for use in automotive applications unless specifically designated by Micron as automotive-grade by their respective data sheets. Distributor and customer/distributor shall assume the sole risk and liability for and shall indemnify and hold Micron harmless against all claims, costs, damages, and expenses and reasonable attorneys' fees arising out of, directly or indirectly, any claim of product liability, personal injury, death, or property damage resulting directly or indirectly from any use of non-automotive-grade products in automotive applications. Customer/distributor shall ensure that the terms and conditions of sale between customer/distributor and any customer of distributor/customer (1) state that Micron products are not designed or intended for use in automotive applications unless specifically designated by Micron as automotive-grade by their respective data sheets and (2) require such customer of distributor/customer to indemnify and hold Micron harmless against all claims, costs, damages, and expenses and reasonable attorneys' fees arising out of, directly or indirectly, any claim of product liability, personal injury, death, or property damage resulting from any use of non-automotive-grade products in automotive applications.

Critical Applications. Products are not authorized for use in applications in which failure of the Micron component could result, directly or indirectly in death, personal injury, or severe property or environmental damage ("Critical Applications"). Customer must protect against death, personal injury, and severe property and environmental damage by incorporating safety design measures into customer's applications to ensure that failure of the Micron component will not result in such harms. Should customer or distributor purchase, use, or sell any Micron component for any critical application, customer and distributor shall indemnify and hold harmless Micron and its subsidiaries, subcontractors, and affiliates and the directors, officers, and employees of each against all claims, costs, damages, and expenses and reasonable attorneys' fees arising out of, directly or indirectly, any claim of product liability, personal injury, or death arising in any way out of such critical application, whether or not Micron or its subsidiaries, subcontractors, or affiliates were negligent in the design, manufacture, or warning of the Micron product.

Customer Responsibility. Customers are responsible for the design, manufacture, and operation of their systems, applications, and products using Micron products. ALL SEMICONDUCTOR PRODUCTS HAVE INHERENT FAILURE RATES AND LIMITED USEFUL LIVES. IT IS THE CUSTOMER'S SOLE RESPONSIBILITY TO DETERMINE WHETHER THE MICRON PRODUCT IS SUITABLE AND FIT FOR THE CUSTOMER'S SYSTEM, APPLICATION, OR PRODUCT. Customers must ensure that adequate design, manufacturing, and operating safeguards are included in customer's applications and products to eliminate the risk that personal injury, death, or severe property or environmental damages will result from failure of any semiconductor component.

Limited Warranty. In no event shall Micron be liable for any indirect, incidental, punitive, special or consequential damages (including without limitation lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort, warranty, breach of contract or other legal theory, unless explicitly stated in a written agreement executed by Micron's duly authorized representative.

General Notes

Throughout the data sheet, figures and text refer to DQs as DQ. DQ should be interpreted as any or all DQs collectively, unless specifically stated otherwise.

RDQS, CK, and WCK should be interpreted as RDQS_t, RDQS_c, CK_t, CK_c, and WCK_t, WCK_c respectively unless specifically stated otherwise. CA includes all CA pins used for a given density.

In timing diagrams, CMD is used as an indicator only. Actual signals occur on CA[6:0].

V_{REF} indicates $V_{REF(CA)}$ and $V_{REF(DQ)}$.

Complete functionality is described throughout the entire document. Any page or diagram may have been simplified to convey a topic and may not be inclusive of all requirements.

Any specific requirement takes precedence over a general statement.

Any functionality not specifically stated herein is considered undefined, illegal, is not supported, and will result in unknown operation.

315b: x32 Automotive LPDDR5/LPDDR5X SDRAM Functional Safety Notes

Functional Safety Notes

This automotive LPDDR5/LPDDR5X DRAM product family has been developed according to ISO 26262:2018 requirements to provide a level of systematic fault coverage that allows its use in systems targeting up to ASIL D compliance.

This LPDDR5/LPDDR5X DRAM contains several new functional safety features that operate within the JEDEC LPDDR5/LPDDR5X protocols (commands, timings, and so forth) and are made available to the integrator on “F” parts (see Part Number Ordering Information). The specification addendum governing these functional safety features is available under NDA. This LPDDR5/LPDDR5X DRAM may operate as a standard JEDEC LPDDR5/LPDDR5X DRAM only, or as a standard JEDEC LPDDR5/LPDDR5X DRAM specifically designed to include functional safety features to communicate fault detection (only available on “F” parts). Additional support may be available to customers who need to integrate Micron’s products in their functional safety-related applications. This support may include Safety Analysis Report, reporting FMEDA results and metrics, Safety Manual and Pin FMEA Report, providing guidelines and instructions for using Micron products in safety-related applications.

Contact a Micron sales representative to initiate the process required to obtain the functional safety documentation.

315b: x32 Automotive LPDDR5/LPDDR5X SDRAM Device Configuration

Device Configuration

Table 2: Die Organization in the Package

Die Organization	768M32 (24 Gb/package)	1536M32 (48 Gb/package)	3G32 (96 Gb/package)

315b Dual Channel, 1 Rank, 2 Rank

Table 5: 315-Ball/Pad Descriptions

Symbol	Type	Description
CK_t_[A:B], CK_c_[A:B]	Input	Clock: CK_t and CK_c are differential clock inputs. All double data rate (DDR) command/address inputs are sampled on both crossing points of CK_t and CK_c. The first crossing point is the rising (falling) edge of CK_t (CK_c) and second crossing point is falling (rising) edge of CK_t (CK_c). Single data rate (SDR) inputs, CS is sampled on the crossing point that is the rising (falling) edge of CK_t (CK_c).
CS0_[A:B], CS1_[A:B]	Input	Chip select: CS is part of the command code, and is sampled on the rising (falling) edge of CK_t (CK_c) unless the device is in power-down or deep sleep mode where it becomes an asynchronous signal. Each rank (0, 1) has its own CS signals. CS1_[A:B] become NC pins in a single-rank package.
CA[6:0]_[A:B]	Input	Command/address inputs: Provide the command and address inputs according to the command truth table.
WCK[1:0]_t_[A:B], WCK[1:0]_c_[A:B]	Input	Data clock: WCK_t and WCK_c are differential clock inputs used for write data capture and read data output.
DQ[15:0]_[A:B]	I/O	Data input/output: Bidirectional data bus.
RDQS[1:0]_t_[A:B], RDQS[1:0]_c_[A:B]	I/O Output	Read data strobe: RDQS_t and RDQS_c are differential output clock signals used to strobe data during a READ operation. RDQS_t is also used as a parity pin during write link protection enabled. Each byte of data has RDQS_t and RDQS_c signals.
DMI[1:0]_[A:B]	I/O	Data mask inversion: DMI serves multiple functions such as data mask (DM), data bus inversion (DBI), and parity at READ with ECC operation by setting the mode register. DMI is a bidirectional signal and each byte of data has a DMI signal.
ZQ_A	Reference	ZQ calibration reference: Used to calibrate the output drive strength and the termination resistance. The ZQ pin should be connected to V _{DDQ} through a 240Ω ±1% resistor.
V _{DDQ} , V _{DD1} , V _{DD2H} , V _{DD2L}	Supply	Power supplies: Isolated on the die for improved noise immunity.
V _{SS}	Supply	Ground reference: Power supply ground reference.
RESET_n	Input	Reset: When asserted LOW, the RESET pin resets the die. Reset is an asynchronous signal.
NC	–	No connect: Not internally connected.
RFU	–	Reserved Future Use: Not internally connected.

- Notes: 1. Published I_{DD} values except I_{DD4RQ} are the maximum I_{DD} values considering the worst-case conditions of process, temperature, and voltage.
 2. BG mode. DVFS and DVFSQ disabled.
 3. BL = 16, DBI disabled.
 4. I_{DD4RQ} value is reference only. Typical value. Output load = 5pF; R_{ON} = 40 ohms; T_C = 25°C
 5. V_{DD1} = 1.70–1.95V; V_{DD2H} = 1.01–1.12V; V_{DD2L} = 0.87–0.97V; V_{DDQ} = 0.47–0.57V
 6. Notes 1 and 2 apply to entire table.

315b: x32 Automotive LPDDR5/LPDDR5X SDRAM I_{DD} Parameters

- Notes:
1. $I_{DD6}^{25^{\circ}\text{C}}$ is the typical value in the distribution with nominal V_{DD} and a reference-only value. $I_{DD6}^{95/105/125^{\circ}\text{C}}$ is the maximum I_{DD} guaranteed value considering the worst-case conditions of process, temperature, and voltage.
 2. DVFS and DVFSQ disabled.
 3. $V_{DD1} = 1.70\text{--}1.95\text{V}$; $V_{DD2H} = 1.01\text{--}1.12\text{V}$; $V_{DD2L} = 0.87\text{--}0.97\text{V}$; $V_{DDQ} = 0.47\text{--}0.57\text{V}$
 4. V_{DD2L} and V_{DDQ} power rails are not used during power-down self refresh.
