

Voltage Regulator, Bias Rail CMOS, Very Low Dropout, 500 mA

NCP145

The NCP145 is a 500 mA VLDO equipped with NMOS pass transistor and a separate bias supply voltage (V_{BIAS}). The device provides very stable, accurate output voltage with low noise suitable for space constrained, noise sensitive applications. In order to optimize performance for battery operated portable applications, the NCP145 features low I_Q consumption. The XDFN4 1.2 mm x 1.2 mm package is optimized for use in space constrained applications.

Features

- Input Voltage Range: 1.0 V to 5.5 V
- Bias Voltage Range: 2.4 V to 5.5 V
- Fixed Voltage Versions Available
- Output Voltage Range: 1.0 V to 1.8 V (Fixed)
- $\pm 1.5\%$ Accuracy over Temperature, 0.5% V_{OUT} @ 25°C
- Ultra-Low Dropout: Typ. 140 mV at 500 mA
- Very Low Bias Input Current of Typ. $80\ \mu\text{A}$
- Very Low Bias Input Current in Disable Mode: Typ. $0.5\ \mu\text{A}$
- Logic Level Enable Input for ON/OFF Control
- Output Active Discharge Option Available
- Stable with a $2.2\ \mu\text{F}$ Ceramic Capacitor
- Available in XDFN4 – 1.2 mm x 1.2 mm x 0.4 mm Package
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

Typical Applications

- Battery-powered Equipment
- Smartphones, Tablets
- Cameras, DVRs, STB and Camcorders

NCP145

PIN FUNCTION DESCRIPTION

Pin No. XDFN4	Pin Name	Description
1	OUT	Regulated Output Voltage pin
2	BIAS	Bias voltage supply for internal control circuits. This pin is monitored by internal Under-Voltage Lockout Circuit.
3	EN	Enable pin. Driving this pin high enables the regulator. Driving this pin low puts the regulator into shutdown mode.
4	IN	Input Voltage Supply pin
5	GND	Ground

ABSOLUTE MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Input Voltage (Note 1)	V_{IN}	-0.3 to 6	V
Output Voltage	V_{OUT}	$-0.3 \text{ to } (V_{IN}+0.3) \leq 6$	V
Chip Enable, Bias Input	V_{EN}, V_{BIAS}	-0.3 to 6	V
Output Short Circuit Duration	t_{SC}	unlimited	s
Maximum Junction Temperature	T_J	150	°C
Storage Temperature	T_{STG}	-55 to 150	°C
ESD Capability, Human Body Model (Note 2)	ESD_{HBM}	2000	V
ESD Capability, Machine Model (Note 2)	ESD_{MM}	200	V

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Refer to ELECTRICAL CHARACTERISTICS and APPLICATION INFORMATION for Safe Operating Area.
2. This device series incorporates ESD protection (except OUT pin) and is tested by the following methods:
 ESD Human Body Model tested per EIA/JESD22-A114
 ESD Machine Model tested per EIA/JESD22-A115
 Latchup Current Maximum Rating tested per JEDEC standard: JESD78.

THERMAL CHARACTERISTICS

Rating	Symbol	Value	Unit
Thermal Characteristics, XDFN4 1.2 mm x 1.2 mm Thermal Resistance, Junction-to-Air (Note 3)	$R_{\theta JA}$	170	°C/W

3. This data was derived by thermal simulations for a single device mounted on the 40 mm x 40 mm x 1.6 mm FR4 PCB with 2-ounce 800 sq mm copper area on top and bottom.

NCP145

ELECTRICAL CHARACTERISTICS $-40^{\circ}\text{C} \leq T_J \leq 85^{\circ}\text{C}$; $V_{\text{BIAS}} = 2.7\text{ V}$ or $(V_{\text{OUT}} + 1.6\text{ V})$, whichever is greater, $V_{\text{IN}} = V_{\text{OUT(NOM)}} + 0.3\text{ V}$, $I_{\text{OUT}} = 1\text{ mA}$, $V_{\text{EN}} = 1\text{ V}$, unless otherwise noted. $C_{\text{IN}} = 1\text{ }\mu\text{F}$, $C_{\text{OUT}} = 2.2\text{ }\mu\text{F}$, $C_{\text{BIAS}} = 0.1\text{ }\mu\text{F}$. Typical values are at $T_J = +25^{\circ}\text{C}$. Min/Max values are for $-40^{\circ}\text{C} \leq T_J \leq 85^{\circ}\text{C}$ unless otherwise noted. (Note 4)

Parameter	Test Conditions	Symbol	Min	Typ	Max	Unit
Operating Input Voltage Range		V_{IN}	$V_{\text{OUT}} + V_{\text{DO}}$		5.5	V

APPLICATIONS INFORMATION

Figure 17. Typical Application: Low-Voltage DC/DC Post-Regulator with ON/OFF Functionality

The NCP145 dual-rail very low dropout voltage regulator is using NMOS pass transistor for output voltage regulation from V_{IN} voltage. All the low current internal control circuitry is powered from the V_{BIAS} voltage.

The use of an NMOS pass transistor offers several advantages in applications. Unlike PMOS topology devices, the output capacitor has reduced impact on loop stability. V_{in} to V_{out} operating voltage difference can be very low compared with standard PMOS regulators in very low V_{in} applications.

The NCP145 offers smooth monotonic start-up. The controlled voltage rising limits the inrush current.

The Enable (EN) input is equipped with internal hysteresis. NCP145 Voltage linear regulator Fixed version is available.

Dropout Voltage

Because of two power supply inputs V_{IN} and V_{BIAS} and one V_{OUT} regulator output, there are two Dropout voltages specified.

The first, the V_{IN} Dropout voltage is the voltage difference ($V_{IN} - V_{OUT}$) when V_{OUT} starts to decrease by percent specified in the Electrical Characteristics table. V_{BIAS} is high enough; specific value is published in the Electrical Characteristics table.

The second, V_{BIAS} dropout voltage is the voltage difference ($V_{BIAS} - V_{OUT}$) when V_{IN} and V_{BIAS} pins are joined together and V_{OUT} starts to decrease.

Input and Output Capacitors

The device is designed to be stable for ceramic output capacitors with Effective capacitance in the range from 2.2 μF to 10 μF . The device is also stable with multiple capacitors in parallel, having the total effective capacitance in the specified range.

In applications where no low input supplies impedance available (PCB inductance in V_{IN} and/or V_{BIAS} inputs as example), the recommended $C_{IN} = 1 \mu\text{F}$ and $C_{BIAS} = 0.1 \mu\text{F}$ or greater. Ceramic capacitors are recommended. For the best performance all the capacitors should be connected to

the NCP145 respective pins directly in the device PCB copper layer, not through vias having not negligible impedance.

When using small ceramic capacitor, their capacitance is not constant but varies with applied DC biasing voltage, temperature and tolerance. The effective capacitance can be much lower than their nominal capacitance value, most importantly in negative temperatures and higher LDO output voltages. That is why the recommended Output capacitor capacitance value is specified as Effective value in the specific application conditions.

Enable Operation

The enable pin will turn the regulator on or off. The threshold limits are covered in the electrical characteristics table in this data sheet. To get the full functionality of Soft Start, it is recommended to turn on the V_{IN} and V_{BIAS} supply voltages first and activate the Enable pin no sooner than V_{IN} and V_{BIAS} are on their nominal levels. If the enable function is not to be used then the pin should be connected to V_{IN} or V_{BIAS} .

If the EN pin voltage is $< 0.4 \text{ V}$ the device is guaranteed to be disabled. The pass transistor is turned-off. The active discharge transistor is active so that the output voltage V_{OUT} is pulled down to GND through a 150 Ω resistor. If the EN pin voltage $> 0.9 \text{ V}$ the device is guaranteed to be enabled. The NCP145 regulates the output voltage and the active discharge transistor is turned-off. The EN pin has internal pull-down current source which assures that the device is turned-off when the EN pin is not connected.

Current Limitation

The internal Current Limitation circuitry allows the device to supply the full nominal current and surges but protects the device against Current Overload or Short.

Thermal Protection

Internal thermal shutdown (TSD) circuitry is provided to protect the integrated circuit in the event that the maximum junction temperature is exceeded. When TSD activated, the

NCP145

regulator output turns off. When cooling down under the low temperature threshold, device output is activated again. This TSD feature is provided to prevent failures from accidental overheating.

Activation of the thermal protection circuit indicates excessive power dissipation or inadequate heatsinking. For reliable operation, junction temperature should be limited to +125°C maximum.
