Spec No. JENF243J-9102A-01

P2/8

## 4. Testing Conditions

《Unless otherwise specified》

Temperature : Ordinary Temperature (15 to 35°C)  
 Humidity : Ordinary Humidity (25 to 85 %(RH))

《In case of doubt》

Temperature : 20 ± 2°C  
 Humidity : 60 to 70 %(RH)  
 Atmospheric Pressure : 86 to 106 kPa

## 5. Appearance and Dimensions

■ Unit Mass (Typical value)  
0.044 g

## 6. Electrical Performance

No.	Item	Specification	Test Method
6.1	Impedance	Impedance shall meet item 3.	Measuring Equipment : KEYSIGHT 4192A or equivalent Measuring Frequency: 1MHz
6.2	DC Resistance	DC Resistance shall meet item 3.	Measuring Equipment: Digital multi meter

## 7. AEC-Q200 Requirement

### 7.1 Performance (based on Table 5 for Magnetics(Inductors / Transformer) AEC-Q200 Rev.D issued June. 1 2010

AEC-Q200			Murata Specification / Deviation						
No.	Stress	Test Method							
3	High Temperature Exposure	1000hours at 125 deg C Set for 24hours at room temperature, then measured.	Meet Table A after testing. Table A <table border="1" style="margin-left: 20px;"> <tr> <td>Appearance</td> <td>No damage</td> </tr> <tr> <td>Impedance(at 1MHz)</td> <td>Within ±10%</td> </tr> <tr> <td>DC Resistance Change</td> <td>Within ±10%</td> </tr> </table>	Appearance	No damage	Impedance(at 1MHz)	Within ±10%	DC Resistance Change	Within ±10%
Appearance	No damage								
Impedance(at 1MHz)	Within ±10%								
DC Resistance Change	Within ±10%								
4	Temperature Cycling	1000cycles -40 deg C to + 105deg C Set for 24hours at room temperature, then measured.	Meet Table A after testing.						
7	Biased Humidity	1000hours at 85 deg C, 85%RH unpowered.	Meet Table A after testing.						
8	Operational Life	Apply Rated Current 85 deg C 1000 hours Set for 24hours at room temperature, then measured	Meet Table A after testing.						
9	External Visual	Visual inspection	No abnormalities						
10	Physical Dimension	Meet ITEM 5 (Style and Dimensions)	No defects						
12	Resistance to Solvents	Per MIL-STD-202 Method 215	Not Applicable						

# Reference Only

AEC-Q200			Murata Specification / Deviation
No	Stress	Test Method	
13	Mechanical Shock	Per MIL-STD-202 Method 213 Condition C 100g's/6ms/Half sine	Meet Table A after testing.
14	Vibration	5g's for 20 minutes, 12cycles eah of 3 orientations Test from 10-2000Hz.	Meet Table A after testing.
15	Resistance to Soldering Heat	No-heating Solder temperature 260C+/-5 deg C Immersion time 10s	Pre-heating: 150 to 180C /90±30s Meet Table A after testing.
17	ESD	Per AEC-Q200-002	ESD Rank: Refer to Item 3. Rating No defects
18	Solderability	Per J-STD-002	Method b : Not Applicable 95% of the terminations is to be soldered. (Except exposed wire)
19	Electrical Characterization	Measured : Inductance	No defects
20	Flammability	Per UL-94	Not Applicable
21	Board Flex	Epoxy-PCB(1.6mm) Deflection 2mm(min) 60s minimum holding time	Holding time: 5s Meet Table A after testing.
22	Terminal Strength	Per AEC-Q200-006 A force of 17.7N for 60s	No defect

## 8. Specification of Packaging

### 8.1 Appearance and Dimensions of plastic tape

Dimension of the Cavity is measured at the bottom side.

(in mm)

### 8.2 Specification of Taping

- (1) Packing quantity (standard quantity)  
2,000 pcs / reel
- (2) Packing Method  
Products shall be packed in the each embossed cavity of plastic tape and sealed by cover tape.
- (3) Sprocket hole  
The sprocket holes are to the right as the tape is pulled toward the user.
- (4) Spliced point  
Plastic tape and Cover tape has no spliced point.
- (5) Missing components number  
Missing components number within 0.1 % of the number per reel or 1 pc., whichever is greater, and are not continuous. The specified quantity per reel is kept.

# Reference Only

Spec No. JENF243J-9102A-01

P4/8

### 8.3 Pull Strength

Embossed carrier tape	10N min.
Cover tape	5N min.

### 8.4 Peeling off force of cover tape

Speed of Peeling off	300mm/min
Peeling off force	0.2 to 0.7N (minimum value is typical)

### 8.5 Dimensions of Leader-tape, Trailer and Reel

There shall be leader-tape (cover tape) and trailer-tape (empty tape) as follows.

### 8.6 Marking for reel

Customer part number, MURATA part number, Inspection number(\*1), RoHS marking (\*2), Quantity etc ...

\*1) « Expression of Inspection No. »

□□    0000    xxx  
 (1)            (2)            (3)

- (1) Factory Code
- (2) Date

First digit : Year / Last digit of year  
 Second digit : Month / Jan. to Sep. → 1 to 9, Oct. to Dec. → O, N, D  
 Third, Fourth digit : Day

- (3) Serial No.

\*2) « Expression of RoHS marking »

ROHS - Y (△)  
 (1) (2)

- (1) RoHS regulation conformity parts.
- (2) MURATA classification number

### 8.7 Marking for Outside package (corrugated paper box)

Customer name, Purchasing order number, Customer part number, MURATA part number, RoHS marking (\*2), Quantity, etc ...

### 8.8. Specification of Outer Case

Outer Case Dimensions (mm)			Standard Reel Quantity in Outer Case (Reel)
W	D	H	
186	186	93	5

\* Above Outer Case size is typical. It depends on a quantity of an order.

# Reference Only

## 9. Caution

### 9.1 Limitation of Applications

Please contact us before using our products for the applications listed below which require especially high reliability for the prevention of defects which might directly cause damage to the third party's life, body or property.

- |                                   |  |
|-----------------------------------|--|
| (1) Aircraft equipment            | (6) Transportation equipment (trains, ships, etc.)   |
| (2) Aerospace equipment           | (7) Traffic signal equipment   |
| (3) Undersea equipment            | (8) Disaster prevention / crime prevention equipment   |
| (4) Power plant control equipment | (9) Data-processing equipment  |
| (5) Medical equipment             | (10) Applications of similar complexity and /or reliability requirements to the applications listed in the above |

### 9.2 Caution(Rating)

Do not exceed maximum rated current of the product. Thermal stress may be transmitted to the product and short/open circuit of the product or falling off the product may be occurred.

### 9.3 Fail-safe

Be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure of our product.

## 10. Notice

This product is designed for solder mounting. (Reflow soldering only)

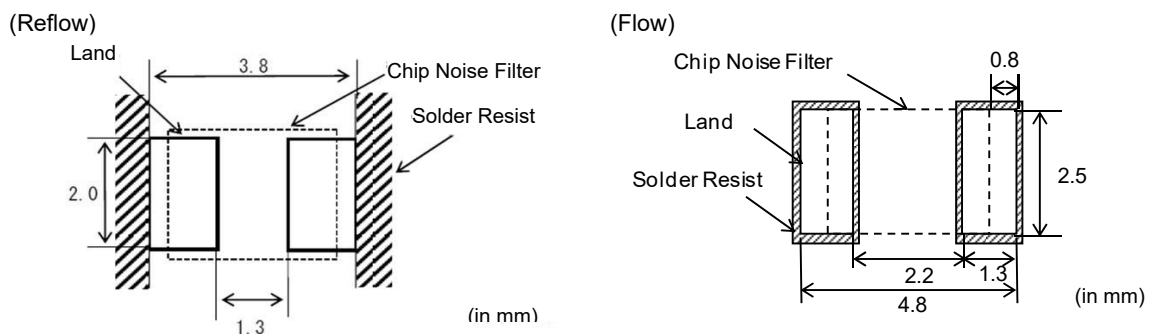

Please consult us in advance for applying other mounting method such as conductive adhesive.

### 10.1 Land pattern designing

Recommended land pattern for flow and reflow soldering is as follows:

It has been designed for Electric characteristics and solderability.

Please follow the recommended patterns. Otherwise, their performance which includes electrical performance or solderability may be affected, or result to "position shift" in soldering process.

### 10.2 Flux, Solder

Flux	<ul style="list-style-type: none"> <li>• Use rosin-based flux.</li> <li>• Don't use highly acidic flux with halide content exceeding 0.2(wt)% (chlorine conversion value).</li> <li>• Don't use water-soluble flux.</li> </ul>
Solder	<ul style="list-style-type: none"> <li>• Use Sn-3.0Ag-0.5Cu solder</li> <li>• Standard thickness of solder paste : 100 μm to 150 μm</li> </ul>

Other flux (except above) Please contact us for details, then use.

# Reference Only

### 10.3 Flow soldering conditions / Reflow soldering conditions

- Pre-heating should be in such a way that the temperature difference between solder and product surface is limited to 100°C max. Cooling into solvent after soldering also should be in such a way that the temperature difference is limited to 100°C max.  
Insufficient pre-heating may cause cracks on the product, resulting in the deterioration of product quality.
- Standard soldering profile and the limit soldering profile is as follows.  
The excessive limit soldering conditions may cause leaching of the electrode and / or resulting in the deterioration of product quality.

#### (1) Flow soldering profile

	Standard Profile	Limit Profile
Pre-heating	150°C、60s min.	
Heating	250°C、4s~6s	265°C±3°C、5s
Cycle of flow	2 times	1 time

#### (2) Reflow soldering profile

	Standard Profile	Limit Profile
Pre-heating	150~180°C、90s±30s	
Heating	above 220°C、30s~60s	above 230°C、60s max.
Peak temperature	245±3°C	260°C、10s
Cycle of reflow	2 times	2 times

# Reference Only

### 10.4 Reworking with soldering iron.

The following conditions must be strictly followed when using a soldering iron.

Pre-heating	150°C, 1 min
Tip temperature	350°C max.
Soldering iron output	80W max.
Tip diameter	φ 3mm max.
Soldering time	3 (+1,-0)s
Times	2 times

Note : Do not directly touch the products with the tip of the soldering iron in order to prevent the crack on the products due to the thermal shock.

### 10.5 Solder Volume

- Solder shall be used not to be exceeded the upper limits as shown below.
- Accordingly increasing the solder volume, the mechanical stress to Chip is also increased. Exceeding solder volume may cause the failure of mechanical or electrical performance.

$$1/3T \leq t \leq T$$

(T: Lower flange thickness)

### 10.6 Product's location

The following shall be considered when designing and laying out P.C.B.'s.

- (1) P.C.B. shall be designed so that products are not subject to the mechanical stress due to warping the board.

[Products direction]

Products shall be located in the sideways direction (Length: a < b) to the mechanical stress.

- (2) Components location on P.C.B. separation.

It is effective to implement the following measures, to reduce stress in separating the board. It is best to implement all of the following three measures; however, implement as many measures as possible to reduce stress.

Contents of Measures	Stress Level
(1) Turn the mounting direction of the component parallel to the board separation surface.	A > D *1
(2) Add slits in the board separation part.	A > B
(3) Keep the mounting position of the component away from the board separation surface.	A > C

\*1 A > D is valid when stress is added vertically to the perforation as with Hand Separation. If a Cutting Disc is used, stress will be diagonal to the PCB, therefore A > D is invalid.

- (3) Mounting Components Near Screw Holes

When a component is mounted near a screw hole, it may be affected by the board deflection that occurs during the tightening of the screw. Mount the component in a position as far away from the screw holes as possible.
