Spec No. JENF243J-9103B-01

P.1/10

NFZ5BBWDDDLZ10D **CHIP NOISE FILTER** Murata Standard Reference Specification [AEC-Q200]

1.Scope

This reference specification applies to NFZ5BBW_LZ10 series, Chip Noise Filter for Automotive Electronics based on AEC-Q200 except for Power train and Safety.

2.Part Numbering

(ex)	NF	Z	5B	BW	2R9	<u> </u>	Z	1	0	<u> L </u>

P.4/10

8. Specification of Packaging

8.1 Appearance and Dimensions of plastic tape

8.2 Specification of Taping

- (1) Packing quantity (standard quantity)
 - ϕ 180 mm reel : 500 pcs. / reel
 - ϕ 330 mm reel : 3000 pcs. / reel
- (2) Packing Method

Products shall be packed in the each embossed cavity of plastic tape and sealed by cover tape. (3) Sprocket hole

The sprocket holes are to the right as the tape is pulled toward the user.

(4) Spliced point

Plastic tape and Cover tape has no spliced point.

(5) Missing components number

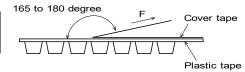

Missing components number within 0.1 % of the number per reel or 1 pc., whichever is greater, and are not continuous. The specified quantity per reel is kept.

8.3 Pull Strength

Embossed carrier tape	10N min.
Cover tape	5N min.

8.4 Peeling off force of cover tape

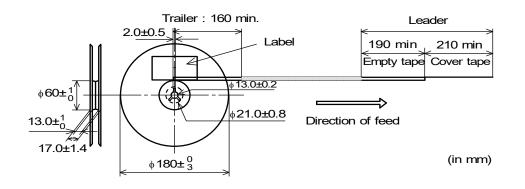

Speed of Peeling off	300mm/min
Peeling off force	0.2 to 0.7N
	(minimum value is typical)

8.5 Dimensions of Leader-tape, Trailer and Reel

There shall be leader-tape (cover tape) and trailer-tape (empty tape) as follows.

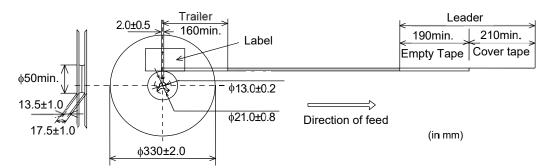

« Packaging Code : L (¢ 180mm reel) »

Spec No. JENF243J-9103B-01

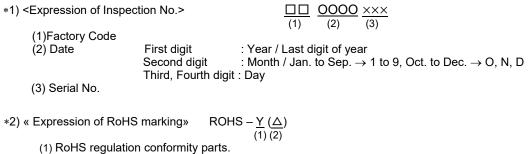

P.5/10

« Packaging Code : K (\$\$ 330mm reel) »

8.6 Marking for reel

Customer part number, MURATA part number, Inspection number(*1), RoHS marking(*2), Quantity etc ···

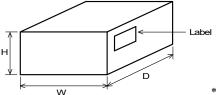

(2) MURATA classification number

8.7 Marking for Outside package (corrugated paper box)

Customer name, Purchasing order number, Customer part number, MURATA part number, RoHS marking (*2) ,Quantity, etc \cdots

8.8 Specification of Outer Case

		Outer Ca	Standard Reel	
Reel		Dimensio	Quantity in	
Reel		(mm)	Outer Case	
	W	D	Н	(Reel)
φ180mm	186	186	93	4
φ 330mm	340	340	95	4

* Above Outer Case size is typical. It depends on a quantity of an order.

Reference Only Spec No. JENF243J-9103B-01

9. A Caution

9.1 Limitation of Applications

Please contact us before using our products for the applications listed below which require especially high reliability for the prevention of defects which might directly cause damage to the third party's life, body or property.

- (1) Aircraft equipment (6) Transportation equipment (vehicles, trains, ships, etc.) (7) Traffic signal equipment
- (2) Aerospace equipment
- (3) Undersea equipment
- (4) Power plant control equipment
- (5) Medical equipment
- (8) Disaster prevention / crime prevention equipment (9) Data-processing equipment
- (10) Applications of similar complexity and /or reliability requirements to the applications listed in the above

9.2 Caution(Rating)

Do not exceed maximum rated current of the product. Thermal stress may be transmitted to the product and short/open circuit of the product or falling off the product may be occurred.

9.3 Fail-safe

Be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure of our product.

10. Notice

This product is designed for solder mounting.

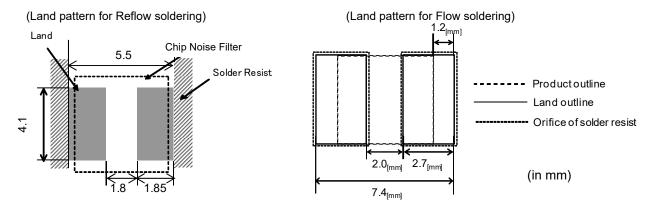

Please consult us in advance for applying other mounting method such as conductive adhesive.

10.1 Land pattern designing (Reflow Soldering)

Recommended land patterns for reflow soldering are as follows:

These have been designed for Electric characteristics and solderability.

Please follow the recommended patterns. Otherwise, their performance which includes electrical performance or solderability may be affected, or result to "position shift" in soldering process.

10.2 Flux. Solder

Flux	 Use rosin-based flux. Don't use highly acidic flux with halide content exceeding 0.2(wt)% (chlorine conversion value). Don't use water-soluble flux.
Solder	• Use Sn-3.0Ag-0.5Cu solder. • Standard thickness of solder paste : 100μ m to 150μ m

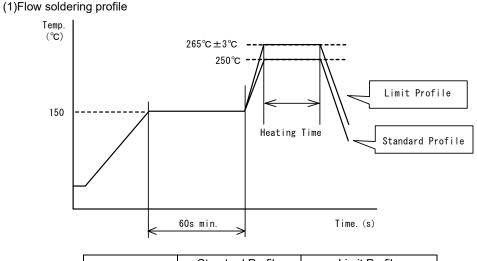

10.3 Flow soldering conditions / Reflow soldering conditions

- Pre-heating should be in such a way that the temperature difference between solder and product surface is limited to 100°C max. Cooling into solvent after soldering also should be in such a way that the temperature difference is limited to 100°C max.
- Insufficient pre-heating may cause cracks on the product, resulting in the deterioration of product quality. • Standard soldering profile and the limit soldering profile is as follows.
- The excessive limit soldering conditions may cause leaching of the electrode and / or resulting in the deterioration of product quality.

P.6/10

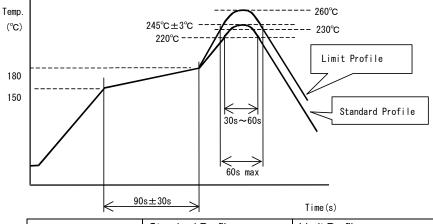

Spec No. JENF243J-9103B-01

P.7/10

	Standard Profile	Limit Profile
Pre-heating	150°C、60s min.	
Heating	250°C、4s∼6s	265°C±3°C、5s
Cycle of flow	2 times	1 time

(2)Reflow soldering profile

	Standard Profile	Limit Profile
Pre-heating	150~180°C 、90s±30s	
Heating	above 220°C、30s~60s	above 230°C、60s max.
Peak temperature	245±3°C	260°C,10s
Cycle of reflow	2 times	2 times

10.4 Reworking with soldering iron.

The following conditions must be strictly followed when using a soldering iron.

Pre-heating	150°C,1 min
Tip temperature	380°C max.
Soldering iron output	80W max.
Tip diameter	φ 3mm max.
Soldering time	3(+1,-0)s
Times	2 times

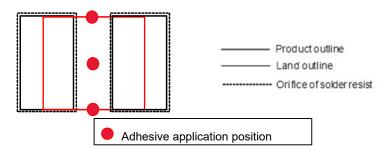

Note : Do not directly touch the products with the tip of the soldering iron in order to prevent the crack on the products due to the thermal shock.

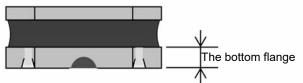

Spec No. JENF243J-9103B-01

10.5 Solder Volume

• Adhesive application of flow is recommended the 3-point application. (prevent the drop of products)

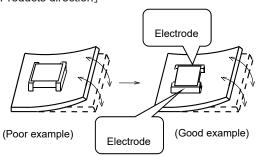

• Amount of adhesive applied is a standard 1/2 to 2/3 of the bottom flange thickness.

10.6 Product's location

The following shall be considered when designing and laying out P.C.B.'s.

(1) P.C.B. shall be designed so that products are not subject to the mechanical stress due to warping the board. [Products direction]

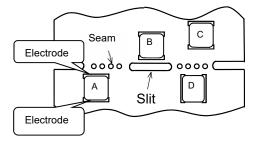

Products shall be located in the sideways direction (Length:a<b) to the mechanical stress.

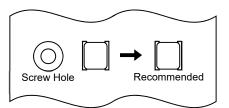

(2) Components location on P.C.B. separation.

It is effective to implement the following measures, to reduce stress in separating the board. It is best to implement all of the following three measures; however, implement as many measures as possible to reduce stress.

Contents of Measures	Stress Level
(1) Turn the mounting direction of the component parallel to the board separation surface.	A > D*1
(2) Add slits in the board separation part.	A > B
(3) Keep the mounting position of the component away from the board separation surface.	A > C

- *1 A > D is valid when stress is added vertically to the perforation as with Hand Separation.
 If a Cutting Disc is used, stress will be diagonal to the PCB, therefore A > D is invalid.
- (3) Mounting Components Near Screw Holes When a component is mounted near a screw hole, it may be affected by the board deflection that occurs during the tightening of the screw. Mount the component in a position as far away from the screw holes as possible.

Spec No. JENF243J-9103B-01

10.7 Cleaning Conditions

Products shall be cleaned on the following conditions.

- (1) Cleaning temperature shall be limited to 60°C max.(40°C max for IPA.)
- (2) Ultrasonic cleaning shall comply with the following conditions with avoiding the resonance phenomenon at the mounted products and P.C.B.
- Power : 20 W / I max. Frequency : 28kHz to 40kHz Time : 5 minutes max.
- (3) Cleaner
 - 1. Alternative cleaner
 - Isopropyl alcohol (IPA)
 - 2. Aqueous agent
 - PINE ALPHA ST-100S
- (4) There shall be no residual flux and residual cleaner after cleaning.

In the case of using aqueous agent, products shall be dried completely after rinse with de-ionized water in order to remove the cleaner.

- (5) Other cleaning
 - Please contact us.

10.8 Resin coating

The inductance value may change due to high cure-stress of resin to be used for coating/molding products. An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating condition etc. Some resin contains some impurities or chloride possible to generate chlorine by hydrolysis under some operating condition may cause corrosion of wire of coil, leading to open circuit. So, please pay your careful attention when you select resin in case of coating/molding the products with the resin.Prior to use the coating resin, please make sure no reliability issue is observed by evaluating products mounted on your board.

10.9 Caution for use

- Sharp material such as a pair of tweezers or other material such as bristles of cleaning brush, shall not be touched to the winding portion to prevent the breaking of wire.
- Mechanical shock should not be applied to the products mounted on the board to prevent the breaking of the core.

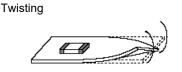

10.10 Handling of a substrate

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate.

Excessive mechanical stress may cause cracking in the product.

Bending

10.11 Storage and Handling Requirements

- (1) Storage period
 - Use the products within 12 months after delivered.
 - Solderability should be checked if this period is exceeded.
- (2) Storage conditions
 - Products should be stored in the warehouse on the following conditions.
 - Temperature : -10 ~ 40°C

Humidity : 15 to 85% relative humidity No rapid change on temperature and humidity

The electrode of the products is coated with solder. Don't keep products in corrosive gases such as sulfur, chlorine gas or acid, or it may cause oxidization of electrode, resulting in poor solderability.

- Products should not be stored on bulk packaging condition to prevent the chipping of the core and the breaking of winding wire caused by the collision between the products.
- Products should be stored on the palette for the prevention of the influence from humidity, dust and so on.
- Products should be stored in the warehouse without heat shock, vibration, direct sunlight and so on.
- (3) Handling Condition

Care should be taken when transporting or handling product to avoid excessive vibration or mechanical shock.
