

NLSX4014

4-Bit 100 Mb/s Configurable Dual-Supply Level Translator

The NLSX4014 is a 4-bit configurable dual-supply bidirectional level translator without a direction control pin. The I/O V_{CC} and I/O V_L ports are designed to track two different power supply rails, V_{CC} and V_L respectively. The V_{CC} supply rail is configurable from 1.3 V to 4.5 V while the V_L supply rail is configurable from 0.9 V to ($V_{CC} - 0.4$) V. This allows lower voltage logic signals on the V_L side to be translated into higher voltage logic signals on the V_{CC} side, and vice-versa. Both I/O ports are auto-sensing; thus, no direction pin is required.

The Output Enable (EN) input, when Low, disables both I/O ports by putting them in 3-state. This significantly reduces the supply currents from both V_{CC} and V_L . The EN signal is designed to track V_L .

Features

- Wide High-Side V_{CC} Operating Range: 1.3 V to 4.5 V
Wide Low-Side V_L Operating Range: 0.9 V to ($V_{CC} - 0.4$) V
- Power Supply Isolation
 - ◆ All Outputs are in the High Impedance State if Either V_L or V_{CC} is at Ground
- High-Speed with 100 Mb/s Guaranteed Data Rate for $V_L > 1.6$ V
- Low Bit-to-Bit Skew
- Overvoltage Tolerant Enable and I/O Pins
- Non-preferential Powerup Sequencing
- Small packaging: 1.7 mm x 2.0 mm UQFN12
- NLV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC-Q100 Qualified and PPAP Capable
- These are Pb-Free Devices

Typical Applications

- Mobile Phones, PDAs, Other Portable Devices

MAXIMUM RATINGS

Symbol	Parameter	Value	Condition	Unit
V_{CC}	V_{CC} Supply Voltage	-0.5 to +5.5		V
V_L	V_L Supply Voltage	-0.5 to +5.5		V
I/O V_{CC}	V_{CC} -Referenced DC Input/Output Voltage	-0.5 to ($V_{CC} + 0.3$)		V
I/O V_L	V_L -Referenced DC Input/Output Voltage	-0.5 to ($V_L + 0.3$)		V
V_{EN}	Enable Control Pin DC Input Voltage	-0.5 to +5.5		V
I_{IK}	Input Diode Clamp Current	-50	$V_I < GND$	mA
I_{OK}	Output Diode Clamp Current	-50	$V_O < GND$	mA
I_{CC}	DC Supply Current Through V_{CC}	± 100		mA
I_L	DC Supply Current Through V_L	± 100		mA
I_{GND}	DC Ground Current Through Ground Pin	± 100		mA
T_{STG}	Storage Temperature	-65 to +150		$^{\circ}C$

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

RECOMMENDED OPERATING CONDITIONS

Symbol	Parameter	Min	Max	Unit
V_{CC}	V_{CC} Supply Voltage	1.3	4.5	V
V_L	V_L Supply Voltage	0.9	$V_{CC} - 0.4$	V
V_{EN}	Enable Control Pin Voltage	GND	4.5	V
V_{IO}	Bus Input/Output Voltage	I/O V_{CC} I/O V_L	4.5 4.5	V
T_A	Operating Temperature Range	-40	+85	$^{\circ}C$
$\Delta I/\Delta V$	Input Transition Rise or Rate V_I, V_{IO} from 30% to 70% of V_{CC} ; $V_{CC} = 3.3 V \pm 0.3 V$	0	10	ns

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

1. Normal test conditions are V_{EN} = 0 V, C_{IOVCC} = 15 pF and C_{IOVL} = 15 pF, unless otherwise specified.
2. V_{CC} is the supply voltage associated with the high voltage port, and V_{CC} ranges from +1.3 V to 4.5 V under normal operating conditions.
3. V_L is the supply voltage associated with the low voltage port. V_L must be less than or equal to (V_{CC} - 0.4) V during normal operation. However, during startup and shutdown conditions, V_L can be greater than (V_{CC} - 0.4) V.
4. Typical values are for V_{CC} = +2.8 V, V_L = +1.8 V and T_A = +25°C. All units are production tested at T_A = +25°C. Limits over the operating temperature range are guaranteed by design.

IMPORTANT APPLICATIONS INFORMATION

Level Translator Architecture

The NLSX4014 auto sense translator provides bi-directional voltage level shifting to transfer data in multiple supply voltage systems. This device has two supply voltages, V_L and V_{CC} , which set the logic levels on the input and output sides of the translator. When used to transfer data from the V_L to the V_{CC} ports, input signals referenced to the V_L supply are translated to output signals with a logic level matched to V_{CC} . In a similar manner, the V_{CC} to V_L translation shifts input signals with a logic level compatible to V_{CC} to an output signal matched to V_L .

The NLSX4014 consists of four bi-directional channels that independently determine the direction of the data flow without requiring a directional pin. The one-shot circuits are used to detect the rising or falling input signals. In addition, the one shots decrease the rise and fall time of the output signal for high-to-low and low-to-high transitions.

Input Driver Requirements

For proper operation, the input driver to the auto sense translator should be capable of driving 2.0 mA of peak output current.

Output Load Requirements

The NLSX4014 is designed to drive CMOS inputs. Resistive pullup or pulldown loads of less than 50 k Ω should not be used with this device. The NLSX3373 or NLSX3378 open-drain auto sense translators are alternate translator options for an application such as the I²C bus that requires pullup resistors.

Enable Input (EN)

The NLSX4014 has an Enable pin (EN) that provides tri-state operation at the I/O pins. Driving the Enable pin to a low logic level minimizes the power consumption of the device and drives the I/O V_{CC} and I/O V_L pins to a high impedance state. Normal translation operation occurs when the EN pin is equal to a logic high signal. The EN pin is referenced to the V_L supply and has Over-Voltage Tolerant (OVT) protection.

Uni-Directional versus Bi-Directional Translation

The NLSX4014 can function as a non-inverting uni-directional translator. One advantage of using the translator as a uni-directional device is that each I/O pin can be configured as either an input or output. The configurable input or output feature is especially useful in applications such as SPI that use multiple uni-directional I/O lines to send data to and from a device. The flexible I/O port of the auto sense translator simplifies the trace connections on the PCB.

Power Supply Guidelines

It is recommended that the V_L supply should be less than or equal to the value of the V_{CC} minus 0.4 V. The sequencing of the power supplies will not damage the device during the power up operation; however, the current consumption of the device will increase if V_L exceeds V_{CC} minus 0.4 V. In addition, the I/O V_{CC} and I/O V_L pins are in the high impedance state if either supply voltage is equal to 0 V.

For optimal performance, 0.01 to 0.1 μ F decoupling capacitors should be used on the V_L and V_{CC} power supply pins. Ceramic capacitors are a good design choice to filter and bypass any noise signals on the power supply voltage lines to the ground plane of the PCB. The noise immunity will be maximized by placing the capacitors as close as possible to the supply and ground pins, along with minimizing the PCB connection traces.

The NLSX4014 provides power supply isolation if either supply voltage V_L or V_{CC} is equal to 0 V. The isolation occurs because the I/O pins are in the high impedance state. It is recommended that pulldown resistors should be used if the V_L or V_{CC} are floated or in a high impedance state. A pulldown resistor connected from the supply voltage to ground ensures that the translator's supply voltage is equal to 0 V.

SOIC-14
CASE 751A-03
ISSUE L

DATE 03 FEB 2016

STYLE 1:
 PIN 1. COMMON CATHODE
 2. ANODE/CATHODE
 3. ANODE/CATHODE
 4. NO CONNECTION
 5. ANODE/CATHODE
 6. NO CONNECTION
 7. ANODE/CATHODE
 8. ANODE/CATHODE
 9. ANODE/CATHODE
 10. NO CONNECTION
 11. ANODE/CATHODE
 12. ANODE/CATHODE
 13. NO CONNECTION
 14. COMMON ANODE

STYLE 2:
 CANCELLED

STYLE 3:
 PIN 1. NO CONNECTION
 2. ANODE
 3. ANODE
 4. NO CONNECTION
 5. ANODE
 6. NO CONNECTION
 7. ANODE
 8. ANODE
 9. ANODE
 10. NO CONNECTION
 11. ANODE
 12. ANODE
 13. NO CONNECTION
 14. COMMON CATHODE

STYLE 4:
 PIN 1. NO CONNECTION
 2. CATHODE
 3. CATHODE
 4. NO CONNECTION
 5. CATHODE
 6. NO CONNECTION
 7. CATHODE
 8. CATHODE
 9. CATHODE
 10. NO CONNECTION
 11. CATHODE
 12. CATHODE
 13. NO CONNECTION
 14. COMMON ANODE

STYLE 5:
 PIN 1. COMMON CATHODE
 2. ANODE/CATHODE
 3. ANODE/CATHODE
 4. ANODE/CATHODE
 5. ANODE/CATHODE
 6. NO CONNECTION
 7. COMMON ANODE
 8. COMMON CATHODE
 9. ANODE/CATHODE
 10. ANODE/CATHODE
 11. ANODE/CATHODE
 12. ANODE/CATHODE
 13. NO CONNECTION
 14. COMMON ANODE

STYLE 6:
 PIN 1. CATHODE
 2. CATHODE
 3. CATHODE
 4. CATHODE
 5. CATHODE
 6. CATHODE

MECHANICAL CASE OUTLINE

PACKAGE DIMENSIONS

ON Semiconductor®

TSSOP-14 WB
CASE 948G
ISSUE C

DATE 17 FEB 2016

SCALE 2:1

NOTES:

- DIMENSIONING AND TOLERANCING PER ANSI Y14.5M, 1982.
- CONTROLLING DIMENSION: MILLIMETER.
- DIMENSION A DOES NOT INCLUDE MOLD FLASH, PROTRUSIONS OR GATE BURRS. MOLD FLASH OR GATE BURRS SHALL NOT EXCEED 0.15 (0.006) PER SIDE.
- DIMENSION B DOES NOT INCLUDE INTERLEAD FLASH OR PROTRUSION. INTERLEAD FLASH OR PROTRUSION SHALL NOT EXCEED 0.25 (0.010) PER SIDE.
- DIMENSION K DOES NOT INCLUDE DAMBAR PROTRUSION. ALLOWABLE DAMBAR PROTRUSION SHALL BE 0.08 (0.003) TOTAL IN EXCESS OF THE K DIMENSION AT MAXIMUM MATERIAL CONDITION.
- TERMINAL NUMBERS ARE SHOWN FOR REFERENCE ONLY.
- DIMENSION A AND B ARE TO BE DETERMINED AT DATUM PLANE -W-.

DIM	MILLIMETERS		INCHES	
	MIN	MAX	MIN	MAX
A	4.90	5.10	0.193	0.200
B	4.30	4.50	0.169	0.177
C	---	1.20	---	0.047
D	0.05	0.15	0.002	0.006
F	0.50	0.75	0.020	0.030
G	0.65 BSC		0.026 BSC	
H	0.50	0.60	0.020	0.024
J	0.09	0.20	0.004	0.008
J1	0.09	0.16	0.004	0.006
K	0.19	0.30	0.007	0.012
K1	0.19	0.25	0.007	0.010
L	6.40 BSC		0.252 BSC	
M	0°	8°	0°	8°

GENERIC MARKING DIAGRAM*

- A = Assembly Location
- L = Wafer Lot
- Y = Year
- W = Work Week
- = Pb-Free Package

(Note: Microdot may be in either location)

*This information is generic. Please refer to device data sheet for actual part marking. Pb-Free indicator, "G" or microdot "▪", may or may not be present.

SOLDERING FOOTPRINT
