

# Slotted Optical Switch

OPB847, OPB848

## Features:

- Non-contact switching
- Apertured for high resolution
- Hermetically sealed components

## Description:

The OPB847 and OPB848 consists of a gallium aluminum arsenide LED and a silicon phototransistor, which is soldered into a printed PCBoard and mounted in a high-temperature plastic housing on opposite sides of a 0.100 inch (2.540 mm) wide slot. Both device types have a .025 (0.635mm) inch by .060 inch (1.524 mm) aperture in front of the phototransistor for high resolution positioning sensing. Phototransistor switching takes place when an opaque object passes through the slot.

## Applications:

- Non-contact interruptive object sensing
- Assembly line automation
- Machine automation
- Equipment security
- Machine safety

### Notes:

- (1) Duration can be extended to 10 seconds maximum when flow soldering.
- (2) Derate linearly 1.00 mW/° C above 25° C.
- (3) Methanol and isopropanol are recommended as cleaning agents.
- (4) Measurement is taken during the last 500  $\mu\text{s}$  of a single 1.0 ms test pulse. Heating due to increased pulse rate or pulse width can cause change in measurement results.
