Description

The PD30CNP50... sensor family comes in a compact 10 x 30 x 20 mm ABS housing. They are designed for use in applications where a compact lightbeam without "halo" light is required to assure a high sensing performance. The potentiometer function for adjustment of the sensitivity makes the sensors highly flexible. The output types NPN or PNP feature both N.O. and N.C. output.

Main functions

- Detects presence or absence of objects that cut off light reflected from a reflector
- The polarized light makes it possible to detect highly reflecting objects
- The PointSpot light source removes halo light and increases detection reliability.
