#### NOTES:

1. The temperature of the component (ambient temperature plus temperature rise) must be within the specified operating temperature range.
2. The maximum current rating is based upon temperature rise of the component and represents the dc current which will cause a typical temperature rise of 40°C with no air flow.
3. To calculate the value of the terminating resistor (Rt) use the following formula:  $R_t (W) = V_{REF} * N / (I_{peak\_primary})$
4. The peak flux density of the device must remain below 2000 Gauss. To calculate the peak flux density for a uni-polar current use the following formula:  
 $B_{PK} = 37.59 * V_{REF} * (Duty\_Cycle\_Max) * 10^5 / (N * Freq\_kHz)$   
 \* for bi-polar current applications divide B<sub>PK</sub> as calculated above by 2.
5. Optional Tape & Reel packaging can be ordered by adding a "T" suffix to the part number (i.e. PL3258 becomes PL3258T). Pulse complies to industry standard tape and reel specifications EIA481.
6. The "NL" suffix indicates an RoHS-compliant part number.
