NOTES :

1. Pulse width ≤ 300 μs, Duty cycle ≤ 2 %
2. Essentially independent of operating temperature typical characteristics.
3. The maximum drain current calculated by maximum junction temperature and thermal impedance. It can be varied by application and environment.
4. $R_{\theta JA}$ is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins. Mounted on a 1 $inch^2$ with 2oz.square pad of copper.
5. E_{AS} is calculated based on the condition of L = 0.1 mH, I_{AS} = 40 A, V_{DD} = 40 V, V_{GS} = 10 V. 100% test in production.
6. Guaranteed by design, not subject to production testing.
7. Test at t = 10 s
