

Product Description

The QPA5368 is an Integrated Reverse Amplifier Module. The part employs Silicon Bipolar die, has high output capability and is operated from 5 MHz to 300 MHz. It provides excellent linearity and superior return loss performance with low noise and optimal reliability.

Functional Block Diagram

20 pin, 11.0 mm x 8.5 mm x 1.375 mm package

Product Features

- Excellent Linearity
- Extremely High Output Capability
- Superior Return Loss Performance
- Extremely Low Distortion
- Optimal Reliability
- Low Noise
- Unconditionally Stable under all Terminations
- 35.6 dB Typical Gain at 300MHz
- 195 mA Typical at 12VDC
- Temperature Sensing Feature

Applications

- Head End Equipment
- 5–300 MHz 75 Ω Amplifier for Reverse Path Systems

Composite Second Order (CSO) - The CSO parameter (both sum and difference products) is defined by ANSI/SCTE 6. Composite Triple Beat (CTB) The CTB parameter is defined by ANSI/SCTE 6. Cross Modulation (XMOD) - Cross modulation (XMOD) is measured at baseband (selective voltmeter method), referenced to 100% modulation of the carrier being tested. Carrier to Intermodulation Noise (CIN) - The CIN parameter is defined by ANSI/SCTE 17 (Test procedure for carrier to noise).

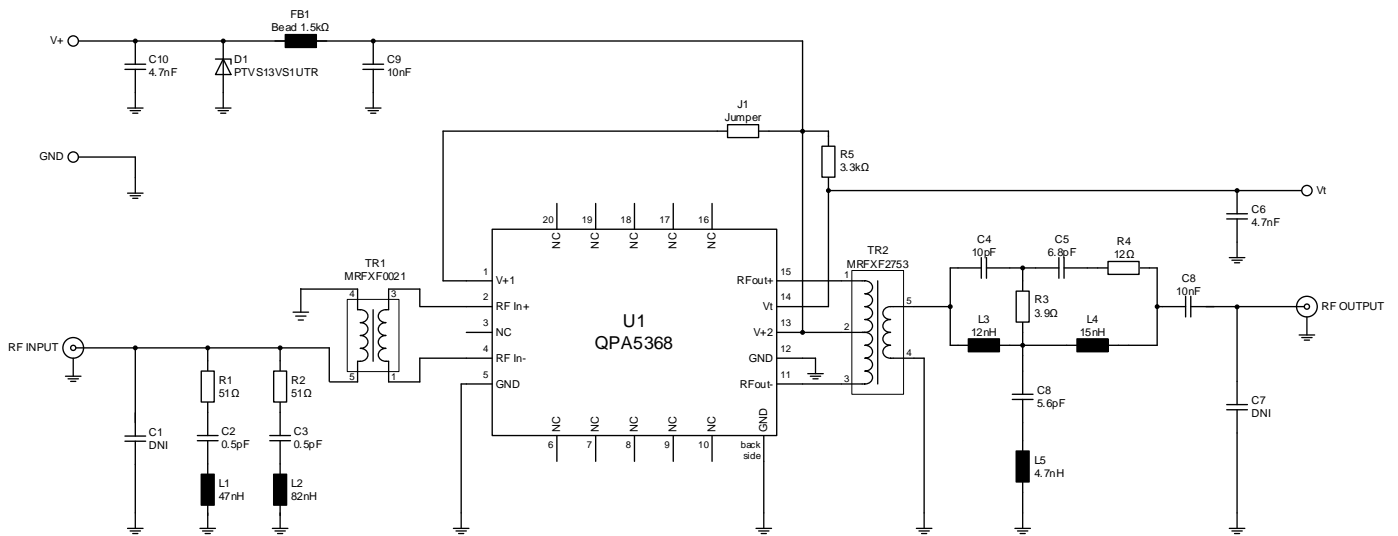

Evaluation Board Assembly Drawing

Evaluation board PCB: FR4, double sided, 1.5mm, 35um Cu

Vias are required under the backside paddle of this device for proper RF/DC grounding and thermal dissipation. A via drill diameter of 0.4mm and a minimum via wall copper plating thickness of 25um is recommended. Open vias are preferred to allow flux and gases to escape during reflow soldering and therefore to minimize voiding. Underneath this via array a heat sink with thermal grease needs to be placed which is able to dissipate the complete module DC power (up to 2.5 Watts). In any case the module backside temperature should not exceed 100 °C.

QPA5368 Temperature Sensing Feature

The QPA5368 provides an internal NTC resistor for temperature sensing. This resistor is located right next to the output transistor stage. Within the application circuit the NTC is part of a voltage divider. The output voltage of the voltage divider (V_t) can be correlated to the module backside temperature.

Package Outline Drawing (Dimensions in millimeters)

Notes:

1. Dimension and tolerance formats conform to ASME Y14.5M-1994.
2. The terminal #1 identifier and terminal numbering conform to JESD 95-1 SPP-012.
3. Co-planarity applies to the exposed ground/thermal pad as well as the contact pins.
4. Package body length/width does not include plastic flash protrusion across mold parting line.
