

### Product Overview

The QPB7425 is a GaAs pHEMT single ended RF amplifier IC featuring 25 dB of flat gain and low noise. This IC is designed to support Fiber to The Home (FTTH) applications from 47 to 1218MHz using a single 8 V supply. Operation down to 3 V is possible for applications with reduced linearity requirements. QPB7425 offers extremely low noise and distortion plus high gain in a SOT-89 package for convenient layout and design in set top and infrastructure projects for 75  $\Omega$  CATV and satellite applications.

### Key Features

- 47 MHz to 1218 MHz Operation
- 3 V, 5 V, or 8 V supply
- Gain; 25 dB Typical
- Noise Figure; 0.9 dB Typical at 850 MHz
- Adjustable Bias Using External Resistors
- Convenient SOT-89 Package
- RoHS Compliant

### Applications

- FTTH GPON and GEAPON
- DOCSIS 3.1
- Head End CMTS Equipment
- Optical Nodes
- Return Path
- Satellite Low Noise Amplifier
- Cable Modem and Set Top Box
- 50ohm LNA to 1.6GHz

### Ordering Information

Part Number	Description
QPB7425SB	Sample bag with 5 pieces
QPB7425SR	7" Reel with 100 pieces
QPB7425TR13	13" Reel with 2500 pieces
QPB7425PCK	47 – 1218 MHz PCBA with 5 pc sample bag

## Absolute Maximum Ratings

Parameter	Rating
Supply Voltage ( $V_{DD}$ )	+10 V
Supply Current ( $I_{DD}$ )	140 mA
Maximum Input Level	65 dBmV
Operating Temperature Range	-40 to +85 °C
Storage Temperature Range	-65 to +150 °C
Maximum Junction Temperature	+150 °C

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability.

### Evaluation Board Assembly Drawing

### Typical Application Schematic (47 – 1218 MHz)

**Notes:**

1. C3/L1 tunes input return loss.
2. L2/C4 tunes output return loss with some contribution from C6.
3. The feedback network is composed of R1 and R2, with C3 being a DC block and L3 providing high end peaking. The ratio of R1 to R2 controls flatness and tilt while the total feedback resistance affects device gain.
4. B1 and B2 provides the DC bias path with RF isolation from the RF output path.
5. R3 and R4 are options that may be added from the input to VDD or to ground to increase linearity or shed power, trading off degraded noise figure and return loss. Refer to Additional Applications section below (“Pullup Resistor Options”) for further information.

### Return Path Schematic (5 – 700MHz)

- Notes:
1. C3/L1 tunes input return loss.
  2. L2/C4 tunes output return loss with some contribution from C6.
  3. R1/L3 sets the level of feedback while B1, L4 provides the bias path with RF isolation from the RF output path.
  4. R2 helps control high end tilt/peaking.
  5. R3 increases bias current for improved linearity and NPR dynamic range. Example pullup values and bias currents are shown below.

**Recommended Mounting Pattern**

**Notes:**

- (1) Ground/thermal vias are critical for the proper performance of this device. Vias should use a .35 mm (#80/.0135") diameter drill and have a final, plated thru diameter of 0.25 mm (0.010").
- (2) Add as much copper as possible to inner and outer layers near the part to ensure optimal thermal performance.
- (3) RF trace width depends upon the PC board material and construction.
- (4) All dimensions are in millimeters (inches). Angles are in degrees.
