Evaluation Board Assembly Drawing

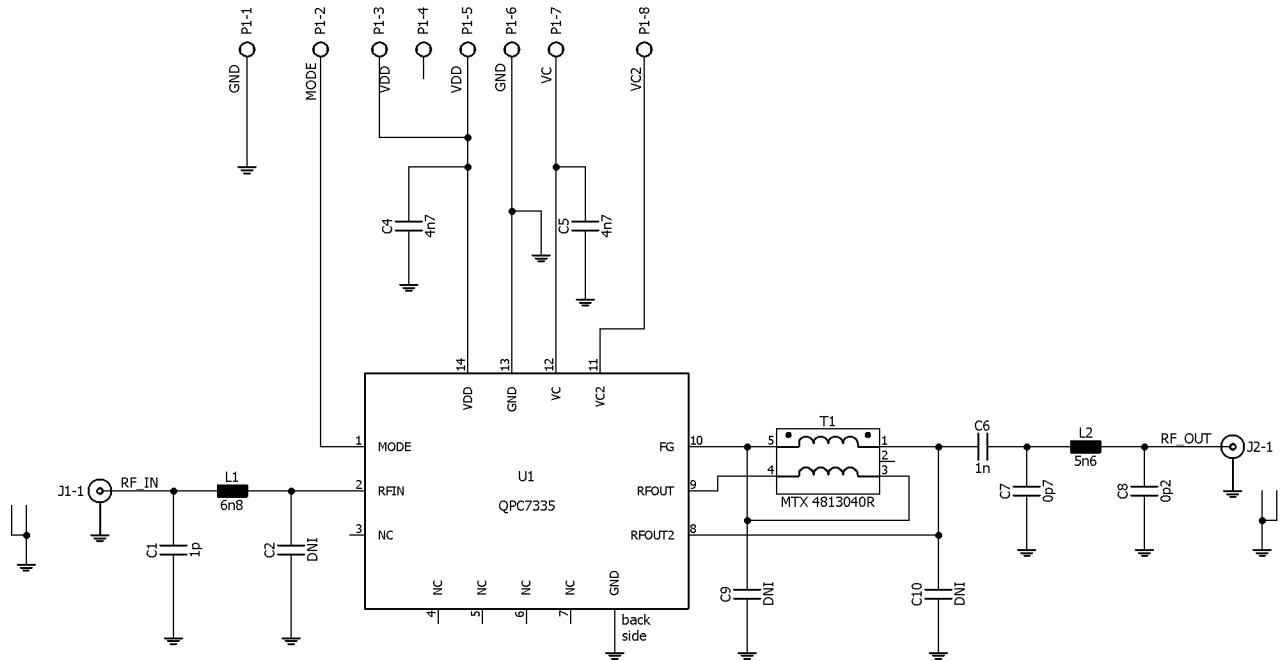

Evaluation board PCB: FR4, double sided, 1.5mm, 35um Cu

Vias are required under the backside paddle of this device for proper RF/DC grounding and thermal dissipation. A via drill diameter of 0.4mm and a minimum via wall copper plating thickness of 25um is recommended. Open vias are preferred to allow flux and gases to escape during reflow soldering and therefore to minimize voiding. Ensure good package backside paddle solder attach for reliable operation and best electrical performance. In any case the module backside temperature should not exceed 110 °C.
