

Product Overview

The Qorvo QPD1029L is a 1500 W (P_{3dB}) discrete GaN on SiC HEMT which operates from 1.2 to 1.4 GHz. Input pre-match within the package results in ease of external board match and saves board space. The device is in an industry standard air cavity package and is ideally suited for radar. The device can support both CW and pulsed operations.

RoHS compliant

Evaluation boards are available upon request.
