## Wi-Fi Front End Module

### Product Overview

The Qorvo® QPF4506B is an integrated front end module (FEM) designed for Wi-Fi 6 systems. The compact form factor and integrated matching minimizes layout area in the application.

Performance is focused on optimizing the PA for a 5 V supply voltage that conserves power consumption while maintaining the highest linear output power and leading edge throughput. Receive path matches the optimal technologies to maximize Rx sensitivity through noise figure performance that is consistent over a wider variety of conditions.

The receive path has integrated die level filtering for 2<sup>nd</sup> and 3<sup>rd</sup> harmonics as well as 2.4 GHz rejection for DBDC operation are included.

Another key feature is the integration of a DC power detector that allows power control down to low powers and enables the possibility to calibrate against a constant slope to reduce device calibration time in production.

The QPF4506B integrates a 5 GHz power amplifier (PA), regulator, single-pole two throw switch (SP2T), and a bypassable low noise amplifier (LNA).
