

Product Description

The QPF8538 provides a complete integrated solution in a single front end module (FEM) for Wi-Fi 802.11a/n/ac systems. The small form factor and integrated matching minimizes layout area in the application and greatly reduces the number of external components.

Performance is focused on a balance of efficiency to linear power that increases the range and throughput of connections. Control lines are reduced to a two-line control scheme

The QPF8538 integrates a 5GHz power amplifier (PA), single-pole two-throw switch (SP2T) and a low noise amplifier (LNA) with bypass. Integrated filtering includes 2nd and 3rd harmonic as well as 2.4GHz rejection for dual-band dual-concurrent operation. A DC power detector is integrated for application calibration enablement. The device is provided in a 2.3mm x 2.3mm x 0.63mm, 16-pin laminate package.

Feature Overview

- P_{OUT} = +17dBm, 802.11ac, VHT80 MCS9 at -35dB Dynamic EVM
- P_{OUT} = +18dBm, 802.11n, HT20/40 MCS7 at -30dB Dynamic EVM
- P_{OUT} = +21dBm, HT20 MCS0 at Spectral Mask Compliance
- 3.3V Operation
- RX Gain = 12.5dB
- Noise Figure = 2.5dB
- Bypass Loss = 5dB
- Input and Output Matched to 50Ω
- Integrated 2.4GHz Rejection Filter

Applications

- Wireless Routers
- Access Points
- Enterprise Client Access Points
- Consumer Premise Equipment
- Wireless Adapters
- Internet of Things

Absolute Maximum Ratings

PARAMETER	RATING	UNIT
DC Supply Voltage (No RF Applied)	-0.5 to +6	V _{DC}
Control Voltage	-0.5 to +5	V _{DC}
DC Supply Current	500	mA
Storage Temperature	-40 to +150	°C
Maximum TX Input Power into 50Ω Load for 11a/n/ac (No Damage)	+10	dBm
Maximum RX Input Power - LNA On Mode (No Damage)	+5	dBm
Maximum RX Input Power – Bypass Mode (No Damage)	+25	dBm

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

Pin Out

Pin Names and Descriptions

PIN	NAME	DESCRIPTION
1	GND	Ground connection. This pin is not connected internally.
2	RX	RF output port for the LNA. This port is matched to 50Ω and DC blocked internally.
3	GND	Ground connection. This pin is not connected internally.
4	VCC	Supply voltage for the LNA and PA Regulator. See applications schematic for biasing and bypassing components.
5	PDET	Power Detector voltage for the TX path. May need external series R/shunt C to adjust voltage level and to filter RF noise.
6	PA_EN	Control voltage. See Switch Control Logic Truth Table for proper voltage settings.
7	GND	Ground connection. This pin is not connected internally.
8	TX	RF input port for the PA. This port is matched to 50Ω and DC blocked internally.
9	NC	No connect. This pin is not connected internally and can be left floating or connected to ground.
10	VCC	Supply voltage for the 1 st and 2 nd stages of the PA. See applications schematic for biasing and bypassing components.
11	VCC	Supply voltage for the final stage of the PA. See applications schematic for biasing and bypassing components.
12	GND	Ground connection. This pin is not connected internally.
13	ANT	RF bi-directional antenna port matched to 50Ω. An external DC block is required.
14	GND	Ground connection. This pin is not connected internally.
15	NC	No connect. This pin is not connected internally and can be left floating or connected to ground.
16	LNA_EN	Control voltage. See Switch Control Logic Truth Table for proper voltage settings.
Pkg Base	GND	Ground connection. The backside of the package should be connected to the ground plane through a short path, i.e., PCB vias under the device are recommended.
