

### General Description

The QPL9503 is a flat-gain, high-linearity, ultra-low noise amplifier in a small 2 x 2 mm surface-mount package. The LNA provides a gain flatness of 2 dB (peak-to-peak) over a wide bandwidth from 3 to 6 GHz. At 5.5 GHz, the amplifier typically provides 21.6 dB gain, +35.5 dBm OIP3 at a 56mA bias setting, and 0.95 dB noise figure. The LNA can be biased from a single positive supply ranging from 3.3 to 5 volts. The device is housed in a green/RoHS-compliant industry-standard 2x2 mm package.

The QPL9503 is internally matched using a high performance E-pHEMT process and only requires five external components for operation from a single positive supply: an external RF choke and blocking/bypass capacitors and a bias resistor going to pin 1. This LNA integrates a shut-down biasing capability to allow for operation in TDD applications.

The QPL9503 is optimized for linear performance across the 3 to 6 GHz frequency band but can operate down to 600 MHz.

## QPL9503 Evaluation Board

**Notes:**

1. See Evaluation Board PCB Information section for material and stack-up.
2. R3 (0  $\Omega$  jumper) is not shown on the schematic and may be replaced with copper trace in the target application layout.
3. All components are of 0402 size unless stated on the schematic.
4. For TDD Applications: R1 = 20K & R2 = 0 $\Omega$
5. For FDD Applications: R1 = 20K 'OR' Pin 5 tied to ground. R2 = DNP/Omitted
6. A through line is included on the evaluation board to de-embed the board losses.
7. R4 sets the current draw. Can be changed for the desired bias point.

## Pin Configuration and Description

Pin No.	Label	Description
1	Vbias	Sets the Icq bias point for the device.
2	RF In	RF Input pin. A DC Block is required.
