WORLD-BEAM[®] QS18 Clear Object Detection

Datasheet

Cost Effective Coaxial Optics Clear Object Sensor

- Reliably detects clear, translucent, or opaque objects including PET, glass containers, and transparent films
- Coaxial optics enable reliable detection of targets to the face of the sensor with no dead zone
- Simple setup and adjustment with a single-turn sensitivity adjuster
- Signal strength indicator aids in adjusting sensor sensitivity and monitoring performance
- Fast response speed with low jitter for high speed bottling and packaging applications
- Bright, visible red light spot for easy alignment
- Convenient mounting options available for 18 mm barrel or side mount
- Bright indicator LEDs show operating status from 360°
- IP67 rated ABS housing
- Dedicated PNP or NPN output depending on model

WARNING: Not To Be Used for Personnel Protection

Never use this device as a sensing device for personnel protection. Doing so could lead to serious injury or death. This device does not include the self-checking redundant circuitry necessary to allow its use in personnel safety applications. A sensor failure or malfunction can cause either an energized or de-energized sensor output condition.

Models

Models	Mode	Range	Output	Connector ¹
QS18VN6XLP		0 to 2.0 m (0 to 6.5 ft) on	NPN	
QS18VP6XLP	POLAR RETRO CLEAR OBJECT	BRT-60X40C 0 to 2.5 m (0 to 8.1 ft) on BRT-51X51BM 0 to 3.0 m (0 to 9.8 ft) on BRT-92X92C	PNP	2 m cable (6.5 ft)

1

[•] To order the 9 m (30 ft) cable model, add the suffix "W/30" to the cabled model number. For example, QS18VN6XLP W/30.

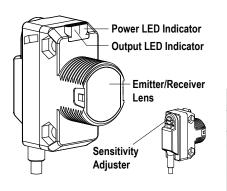

<sup>To order the 4-pin M12/Euro-style integral quick disconnect model, add the suffix "Q8" to the model number. For example, QS18VN6XLPQ8.
To order the 150 mm (6 in) PVC cable model with a 4-pin M12/Euro-style quick disconnect, add the suffix "Q5" to the model number. For example, QS18VN6XLPQ5.</sup>

To order the 4-pin M8/Pico-style integral quick disconnect model, add the suffix "Q7" to the model number. For example, QS18VN6XLPQ7.

To order the 150 mm (6 in) PVC cable model with a 4-pin M8/Pico-style quick disconnect, add the suffix "Q" to the model number. For example, QS18VN6XLPQ.

[•] Models with a quick disconnect require a mating cordset.

Overview

The Banner QS18 sensor is a high performance clear object detection sensor. The polarized coaxial optical design ensures reliable detection of transparent, translucent, and opaque targets at any distance between the sensor and the reflector. Low contrast sensing applications include PET bottles, glass containers, and transparent films. The sensor can also be used to detect optical surfaces such as: LCD panels with built in polarizing films, solar panels, and semiconductor wafers.

Indicators (Two LEDs: One Green, One Amber)			
Sensor Condition	Green LED	Amber LED	
Output OFF (black wire)	ON	OFF	
Output ON (black wire)	ON	ON	
Notification — Signal strength is near the switch point and indicates a marginal sensing condition	Flashing at 5 Hz	Can be ON or OFF	
Power ON	ON	_	

10-30V dc

Installing and Mounting the Sensor for Low Contrast Applications

Reliable transparent object detection depends on the sensor always detecting the object as "dark state" and the reflector as the "light state". Using a recommended reflector, and proper orientation of the sensor to the reflector, is key to good clear object detection. Optimize the reliable detection of transparent and clear objects by applying the following steps when mounting the sensor and selecting a retroreflective target.

- 1. If a bracket is needed, mount the sensor onto the bracket.
- 2. Mount the sensor (or the sensor and the bracket) to the equipment at the desired location. Do not tighten at this time.
- 3. Align the sensor's light spot to the middle of the retroreflector.
- 4. Mount the retroreflector perpendicular to the sensor optical axis (\pm 5°).
- 5. Tighten the screws to secure the sensor (or the sensor and the bracket) to the aligned position.

Mounting Considerations for Opaque Objects with Mirror Like Surfaces

To minimize the potential for reflections from mirror like objects affecting the sensor, it is best to side mount the sensor.

Sensor Sensitivity Adjustment

Load

_oad

2

10-30V dc

After the sensor and retroreflector have been properly installed, the sensor is ready to be adjusted to ensure detection of the desired object. Sensor sensitivity is adjusted with the single turn adjuster.

Sensor Sensitivity Adjustment for Transparent Object Detection

To adjust the sensor sensitivity to detect transparent objects, follow these steps:

- 1. Ensure there is nothing obstructing the optical path between the sensor and retroreflector.
- 2. Turn the sensitivity adjuster counterclockwise to the adjuster stop position.
- 3. Slowly rotate the sensitivity adjuster clockwise until the Green LED starts flashing and the Amber LED turns off.
- 4. Continue to turn the sensitivity adjuster clockwise until the Green LED stops flashing.
- 5. At this point the sensor is set to detect low contrast glass and plastic containers.
- 6. Check to make sure that the sensor can now reliably detect the transparent target.

This level of adjustment should work for most transparent object detection applications. For more demanding applications, the sensor can be adjusted closer to the switch point.

Sensor Sensitivity Adjustment for Opaque Object Detection

To adjust the sensor sensitivity to detect objects that are completely opaque, follow these steps:

- 1. Ensure there is nothing obstructing the optical path between the sensor and retroreflector.
- 2. Turn the sensitivity adjuster clockwise to the adjuster stop position. The amber LED should be off.
- 3. Place the opaque object between the sensor and the reflector.
- 4. Turn the sensitivity adjuster counterclockwise until the amber LED turns on and the green LED is on solid.
- 5. Check to make sure the sensor can reliably detect the opaque object.

If the sensor cannot reliably detect the object, use the procedure specified above for transparent object detection.

Specifications

Supply Voltage

10 V to 30 V dc (10% maximum ripple) within specified limits Supply Current (Exclusive of Load Current)

< 25 mA Repeatability

. 100 μs

Supply Protection Circuitry

Protected against reverse polarity and transient voltages

Output Protection Circuitry Protected against false pulse on power-up and continuous overload or short-circuit

Output Configuration

Current sourcing (PNP) or current sinking (NPN), depending on model Rating: 100 mA maximum

OFF-State leakage current: < 50 µA at 30 V

ON-state saturation voltage: < 1.5 V at 10 mA; < 3 V 100 mA

Connections

PVC-jacketed 4-conductor 2 m (6.5 ft) or 9 m (30 ft) unterminated cable, or 4-pin Euro-style or 4-pin Pico-style quick-disconnect, either integral or 150 mm (6 in) cabled, are available. Quick disconnect cordsets are ordered separately.

Operating Conditions

Temperature: -40 °C to +70 °C (-40 °F to +158 °F) Humidity: 95% at +50 °C maximum relative humidity (noncondensing)

Environmental IFC IP67: NFMA 6

Adjustments

Single-turn sensitivity adjustment

Application Notes

Reflectors with micro-prism geometry, such as the BRT-51X51BM, are recommended for demanding transparent object detection applications. Retroreflective tape is not recommended for transparent object detection applications.
