## SOLDER PROCEDURE IN INDUSTRIAL ENVIRONMENT

1. Deposition of solder paste 'Sn Ag4 Cu0.5' on mounting zone by screen printing application. We recommend a low residue flux.  
We advise a thickness of 150 microns ( .006 inch ). Verify that the edges of the zone are clean.
2. Placement of the receptacle on the mounting zone with an automatic machine of 'pick and place' type.  
Video camera is recommended for the positioning of the component. Adhesive agents must not be used on the receptacle.
3. Soldering by infra-red reflow.  
Below, please find the typical profile to use.
4. Cleaning of printed circuit boards.
5. Checking of solder joints and position of the component by visual inspection.

Lands for solder paste

COPLANAR LINE  
 Pattern and signal are on the same side.  
 Thickness of the PCB : 1.6 mm  
 The material of the PCB is the epoxy resin of glass fabrics bac ( ER : 4.8 )  
 The solder resist should be printed except for the land pattern on the PCB.
