SOLDER PROCEDURE

- 1. Deposition of solder paste 'Sn Ag4 Cu0.5' on mounting zone by screen printing application. We recommend a low residue flux.
 - We advise a thickness of 150 microns (5.85 microinch). Verify that the edges of the zone are clean.
- 2. Placement of the receptacle on the mounting zone with an automatic machine of 'pick and place' type.
 - Video camera is recommended for the positioning of the component. Adhesive agents must not be used on the receptacle.
- 3. Soldering by infra-red reflow.

 Below, please find the typical profile to use.
- 4. Cleaning of printed circuit boards.
- 5. Checking of solder joints and position of the component by visual inspection.
